I haven't done ham installations, but I do frequent marine (VHF) installations as well as cellular. As is the case with the marine radios, you have to get a hot wire that will supply enough amps for the equipment, otherwise you'll have a dead mike even though you'll receive all right.
An easy way to go about this would be to find a fuse in the fuse block that has enough power to drive the equipment, find out what it powers, and hook up to that circuit somewhere under the dash. That way you'll get enough power to run the radio. Also install another fuse, even if you're using a fused circuit.
If you can trace a wire to under the dash, you won't have to worry about the firewall, although if it comes down to it, you can either drill one (CAREFULLY!) or sometimes there are knock-out holes on the firewall for use in certain applications. It is also possible that there are connectors which are not used (i.e. options that you might not have) on the firewall, which would be an easy way to get the power through the firewall without having to mess with it.

The TM-255 was the 2 meter version, the 455 was the 70cm version.

Joe

4606. Re: FT290/790 9600 Bd mods?

Bob,

this is info about 9600 bps mods for FT290/790 from my acrhive.
I used it some time ago and it run well.
I hope it will be usefull for you.

MODEM @WW de:DL6DBN 23.09.90 07:50 0 1568 Bytes
FT290/790RII mods. PSK/9k6
*** Bulletin-ID: 229008DB0SGL ***

de DL6DBN @ DB0SGL

How to modify YAESU FT-290 RII and FT-790RII
for 1200 BpS PSK and 9600 BpS FSK

As you know, for 1200 BpS PSK/FM a direct injektion of the signal into the FM-varicap is recommended and for 9600 BpS FSK necessary. For 9600 BpS you will need the FM-discriminator output.

Due to SM-Technology the following modifications are not easy to manage.
FT-790RII in ()

The FM-discriminator output is at pin 9 of Q4001 (Q402) MC3357P. Use a shielded cable to connect this pin with your 9k6-modem input. The IF-bandwidth of CF01 (CF01) CFW455F seems to be to small for very good results, so I recommend to exchange it with a CFW455D. With good RF-strength and proper tuning the CFW455F can fit as well.

The more complicate modification is the injection point. Inject your TX-signal below the main unit where R30124, C30120 and C30126 (R30117, C30117 and C30124) come together (all SMD). Is it necessary to say, use a shielded cable? As long as no other AF from the tone unit or the microphon reaches this point you must not cut any connections. But adjust your FM-deviation.

I made this changes in both radio sets and had already good contacts via UoSAT-OSCAR 14. So good luck and success.

With a marine installation, you are not dealing with a computer system.
With a cell phone, you are dealing with 3 watts instead of 50 (and some
computers react to cell phones. Do yourself a favor and find a way to run
the b+ lead direct to the battery. Performance will be better and the
battery acts as a buffer for power spike and RF down the line.

Well, thanks, Peter. No, there's no "J" mark that I can see on the
unit or the carton; however the carton may have been swapped. Thanks
for mentioning that, tho, since I haven't bought a VHF radio in many
years I wasn't aware of the mark or its significance.

With a 50 watt transmitter, I'd still go directly to the battery...drill
a small hole in the firewall if necessary...

Hi all,

Thanks for the replies to my query about the tuner/linear amp
relationship. I have a specific question now:

Can anyone help with a wiring diagram for the Kenwood 9/8/450S Remote
plug? This gets wired to the twin phono plugs required at the linear's
ALC and Relay jacks. Unfortunately, the Kenwood manual only shows a neat
cable running between the two locations, but gives no pin information.
The Remote plug comes unwired, so I need the details!

Thanks in advance...

I have heard this several times before, and it's always stated matter-of-factly. Can someone please explain, in a cogent technical manner, why a half-wave vertical requires a groundplane? My R7000 manual explicitly states "DO NOT install radials." As opposed to "You shouldn't NEED to install radials." Please note the emphasis.

4625. External keypad for Kenwood TS-870S???

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-12 00:00:00 UTC
From: dquick@nospam.mailbox
Message-ID: <32b02945.0@vortex.mm.com>
Source record: 188750

Does anyone know of an extarnal keypad for the
Kenwood TS-870S? Something like the "Stone Mountain QSYers" that
were made for a variety of rigs a few years back.

I'm considering an 870, but I hate that 2 x 5 keypad layout.

Thanks;

Dave WD0EKL

Don,
I have the Timewave 59+ and really want to upgrade to the 599ZX!!
In a word IT'S AWESOME!!
I recently used it during the CQWW DX contest and let me tell you.. If I
turned it off, I lost a good 40% or all my QSO's. A friend of mine also has
one and recently bought a FT-1000MP, which includes DSP filtering in the
radio... He wrote to timewave and Yaesu that the DSP in the radio was
absolutely worthless!!! The timewave was FAR FAR superior...
once you use one for awhile you'll wonder how you got along without it..
I use it for SSTV, RTTY and just about everything.. gives me phone quality
QSO's just about all of the time..

Needless to say I'm impressed with it.

Now all I have to do is sell the 59+ and get the 599ZX... Timewave's web site
has the complete manual as well as other information on line thats worth
reading.. I think the URL is www.timewave.com

Kenwood TS-940S/AT HF transceiver with built-in automatic antenna tuner. Excellent condition, front panet mint, works perfectly in every respect; no problems of any kind.

SP-940 desk speaker, matches transceiver. Mint condition, in original box.

HC-10 world time clock. Matches transceiver color/styling. Two digital displays show time in local time zone, plus a selected DX city. Excellent condition.

Will sell all together for $995 + shipping from DC area.

Kenwood MC-85 desk mic also available. Connects to as many as three radios, switching between them; two cables included. Includes built-in amp and compressor. Excellent condition. $95.

Everything works perfectly, and is very clean; non-smoker. Email if interested. Thanks.

Mike, N4PDY

4634. A Sad Chapter In Radio History

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-12 00:00:00 UTC
From: tnic <tnic@styx.ios.com>
Message-ID: <58pdu2$h5i@nnrp3.farm.idt.net>
Source record: 188759

I found this sad chapter in radio history on the web at:
http://pacmedia.com/fecha/saints/armstrong.html

Edwin Armstrong

The creator of FM radio

Edwin Howard Armstrong is the father of FM radio and the grandfather of radar and a great grandfather of space communication, but he never reaped the full reward of his genius. He was born on December 18, 1890 in New York City and died on February 1, 1954, alone and in disgrace.

Young Howard Armstrong had been so full of life. In his teens, he was charged with energy, and totally wrapped up in radio. He liked girls, but he was too busy to date. He studied his head off at Columbia University. He drove a red motorcycle. He liked to climb towers and hang from his heels when he got to the top. And he was always ready to question the untested (and frequently wrong) theories of some of his professors.

Armstrong didn't invent radio. Alexander Popov and Guglielmo Marconi and Lee de Forest get the credit for that. But, in 1912, at the age of 22, Armstrong found out for himself how Lee de Forest's radio tube really worked -- and redesigned it by taking the electromagnetic waves (or electrons) that came from a radio transmission and feeding the signal back through the tube again and again, each time increasing its power as much as 20,000 times a second. He called the phenomenon "regeneration." It was the most important advance in the young history of radio -- because, when the feedback was increased beyond a critical level, the tube gave forth an oscillation that created its own radio waves. Armstrong made the de Forest tube into a transmitter as well as a receiver. It not only amplified radio signals. It generated them as well. And this advance made all the difference. Now radio engineers no longer needed 20-ton generators to get their stations on the air.

Armstrong patented his discovery in 1913, and licensed it to the Marconi company in 1914. And then he was off to France to fight in World War I. On the battlefields of western Europe, Captain Armstrong discovered that the American Expeditionary Force had little or no radio. Almost single handedly, he remedied that situation -- on the ground, and in the air. He personally designed and outfitted the fledging Allied air force with radios, often going up and testing them himself. Then, while still stationed in Paris, he invented something then called the superheterodyne receiver, a complex bit of electronic sorcery that is still basic to the tuner found in almost every radio

and television and radar.

In 1920, Westinghouse bought Armstrong's patent for the superheterodyne receiver, and started up the nation's first radio station, KDKA in Pittsburgh. It signalized its accomplishment by broadcasting the election returns that brought Warren G. Harding to the White House. All of a sudden, radio was the craze of the post- war period. Kids in America started making their own crystal sets. Other manufacturers started making their own brand of "radiola." Other stations came on the air. Though all this, Marconi's company, the Radio Corporation of America, had been sitting on the sidelines, content to concentrate on its international telegraph business. But not for long. RCA soon bought up all of Westinghouse's radio patents, and those of AT &T and any others who had them, including Armstrong's patents for regeneration.

Another radio pioneer, Lee deForest, objected. He said regeneration was his idea, and started legal procedures with the U.S. Patent Office. He lost his case, but then went on to pursue appeals against Armstrong in the federal courts for almost two decades. He lost his case at every step of the way, and then, in a legal fluke, won his final appeal before the U.S. Supreme Court. Much to the outrage of scientists and engineers from coast to coast, a Supreme Court judge misunderstood the case, and ended up siding with de Forest.

So did RCA. If de Forest won his suit against Armstrong, RCA would retain control of its patent for an extra ten years. So RCA gave no help to Armstrong, even though the company lawyers knew what the truth was. The truth was that Armstrong had helped create an industry which, in 1934, a depression year, was worth almost $2 billion. Everybody -- RCA, Zenith, Philco, Magnavox, Motorola and Crosley -- they were all turning fantastic profits, using Armstrong's inventions.

And Armstrong went on inventing. He started working on radio's static problem, experimenting with what would later become known as frequency modulation, something that other scientists had already decided wouldn't work. One of the experts, John Renshaw Carson, a researcher at Bell Laboratories, said, "I have proved, mathematically, that this type of modulation inherently distorts without any compensating advantages whatsoever. Static, like the poor, will always be with us."

Armstrong was undaunted. He said, "I could never accept findings based almost exclusively on mathematics. It ain't ignorance that causes all the trouble in this world. It's the things people know that ain't so."

But Carson had done Armstrong a favor. He'd persuaded other researchers to abandon their work on FM, leaving Armstrong a clear field. But it would not be an easy run. Armstrong worked for years, evolving new theories about radio transmission, turning past theory on its head, building new kinds of transmitters in his lab at Columbia, and radically more complex receivers. Armstrong completed his first field test on June 9, 1934 -- sending an organ recital, via both AM

and FM, from an RCA tower on top of the Empire State Building to the home of a trusted old friend on Long Island. The FM organ came through loud and clear. The AM version had "hundreds of thousands times more static." He did other tests, at longer distances, during the "summer static" season. Not only did those experiments work. Armstrong proved that the signal did not fade at the perimeter as AMs did.

FM not only eliminated static. It also produced a better sound, three times better than AM. Listeners could distinguish the on-air differences between the whine of a rip saw and the huff of a cross cut. Furthermore, FM delivered sounds that spanned the full range of the human ear -- from the deep rumble of a kettle drum to the delicate keening of a flute, spanning a range between 50 cycles and 15,000 cycles. At best, AM delivered 5,000 cycles. Armstrong had discovered hi-fi. Armstrong also found that a single FM carrier wave could transmit two radio programs at once, a telegraph message and a facsimile of the front page of The New York Times. He'd discovered multiplexing.

During World War II, Armstrong did important research on long range radar for the War Department and gave his FM patents to the military for no fee, an important gift, once the U.S. commanders realized that the German army traveled on AM, which they could easily jam. FM was unjammable. By the end of the war, Armstrong had developed his continuous wave FM radar to the point where he was able to bounce a radio signal 238,000 miles -- to the moon and back again. He had proven that FM waves, unlike AM waves, could penetrate the ionosphere. That paved the way for radio communication in space, and it gave astronomers a new tool to measure distances from the earth to the ends of the universe.

By the end of World War II, FM had been proven. Much to the disgust of RCA's David Sarnoff. "I thought Armstrong would invent some kind of a filter to remove static from our AM radio. I didn't think he'd start a revolution -- start up a whole damn new industry to compete with RCA." Furthermore, FM was a distraction. Sarnoff wanted RCA to put its resources into the development of television, which was taking up huge chunks of RCA's working capital. "A new kind of radio," said Sarnoff, "is like a new kind of mouse trap. The world doesn't need another mousetrap."

Sarnoff stalled Armstrong by ordering RCA engineers to keep asking for more tests, and by lobbying the FCC to deny Armstrong an experimental license to test FM. He even made an unsuccessful attempt to steal Armstrong's FM patents by filing an interference with the U.S. Patent Office. Armstrong fought back on every front. Mainly, he plunged ahead with his own plans for FM, by selling a large block of his stock in RCA and building his own FM station on the New Jersey Palisades near New York City.

And he got General Electric to start working with him. GE made a discovery of its own. FM signals did not interfere with one another.

An FM radio simply picked up the stronger signal. This meant that a number of low-power stations could operate in close proximity, and that more stations could use a small part of the electromagnetic spectrum.

And so, FM stations started to proliferate. There were already 40 of them in 1939. In May 1940, the FCC allotted the 42-50 megacycle band to FM radio; in two months, it received more than 500 FM applications, and still others continued to pour in. The National Television Standards Committee decided that FM should be the standard for the audio portion of the TV broadcast signal. Armstrong was sanguine. He predicted, "In three or four years, there will be more FM listeners than there are now for AM.

He was right. But Armstrong would see no personal rewards for all his work and all his genius. Now he found that RCA and all of America's big communication giants were teaming up to stifle FM, and take away all the rewards Armstrong had been waiting for. He'd expected royalties on the manufacture of FM receivers. He expected to negotiate contracts with FM broadcasters. He also expected royalties on every TV set sold -- in the U.S. and, eventually, abroad, for TV's sound system was his -- FM.

But that wasn't going to happen. RCA tried to circumvent Armstrong's patents, and began producing televisions with his sound system, but paying him nothing, and then, finally, offering him $1 million for a non-exclusionary license. It was something like a scene from the Old West, the rich rancher going to his upstart competitor next door and saying, "I'm going to give you $1 million for your spread. Do you want me to pay you, or do want me to pay your widow?"

Congress moved to an inquiry, with Sen Charles W. Tobey of New Hampshire taking the lead on Armstrong's side. Sen. Tobey said, "RCA has been doing everything it can to keep Armstrong down. They did their damnedest to ruin FM. At the same time, they were supplying free TV sets to commissioners of the FCC."

The Congressional inquiry went nowhere. In 1948, Armstrong turned to the courts -- charging open theft, infringement on five of his basic FM patents. RCA responded with an army of lawyers who tied him up for six years with trickery, truth-twisting, evasion, procrastination, spoliation, and botheration. RCA had time.

For Armstrong, time was running out. RCA could afford the legal fees. Armstrong had to sell many of his assets, including his stock in Zenith and RCA and Standard Oil, for $200,000. With all of his other expenses, including the expense of running his research facility at Columbia University, Armstrong could afford to pay only $22,000 to his lawyers. By 1954, he was ready to settle. He asked RCA for $2.4 million. RCA countered with $200,000, less than the outstanding bill for his legal fees. Armstrong appealed to his wife, Marion. Would she advance him some of the money he had given her years ago? She

objected. That was the money for their retirement.

Exhausted and out of hope, frustrated by all the litigation, Armstrong exploded in a great rage. He swung a poker at Marion. The blow landed on her arm. She fled to her sister in Connecticut. Armstrong had shattered his happy marriage of nearly 30 years. He spent Christmas and New Year's alone in his New York apartment. Then, on January 31, 1954, he wrote a final letter to Marion.

I am heartbroken because I cannot see you once again.
I deeply regret what has happened between us. I cannot
understand how I could hurt the dearest thing in the whole
world to me. I would give my life to turn back to the time
when we were so happy and free. God keep you and may
the Lord have mercy on my soul.

Next morning, Edwin Howard Armstrong put on his hat and coat, wrapped a scarf around his neck and walked out the window of his apartment on the 13th floor.

David Sarnoff told the press, "I did not kill Armstrong."

A month later, Sarnoff announced at RCA's annual meeting that the company had reached an all-time high earnings of more than $850 million. At the end of that meeting, one man stood before his fellow stockholders and told them to "have faith and confidence in Uncle Sam of the United States of America and in Daddy David of RCA."

Armstrong's lawyers stuck with Armstrong's widow, working on contingency until they finally squeezed a settlement out of RCA: Marion would get a little more than a million dollars, the same amount that Sarnoff had offered Armstrong in 1940. In effect, Sarnoff had finally gotten an answer to the question: "Do you want me to pay you, or your widow?"

4637. Kenwood TM V7A dual band (I got one)

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-12 00:00:00 UTC
From: tnic <tnic@styx.ios.com>
Message-ID: <58pekc$h5i@nnrp3.farm.idt.net>
Source record: 188762

My TM-V7A arrived. I have been playing with it for a few days.

My initial fear the BLUE display would not look good were needless.

The display looks great. It has a dimmer, contrast and reverse setting.
There is no problem with the display in even bright sunlight.
The display gets losts of "WOWs" from passengers in my car.

The alph name tags for memory (180 memories) is the feature that
attracted me most. Now I know which repeater Im on by name (freq number
is also displayed).

The letters are all very large on the display and much more readable
than the Kenwood 733 (my other radio).

This radio scanns memory and freq. 2 or 3 times faster than the 733.

The menu system is very good. Once you "fool" with is you dont need the
manual (loose the 733 manual and your sunk).

The controls are all very well placed.

I plan on buying a second TM-V7A soon.

Only one nit. There is no mute feature (currently). Kenwood indicated
this "may" be comming soon and would fix me up.

Its a super radio (not that any of the other new radios are not as good).

What is the current draw in tx on 2m. If it is normal then the diode
switch is probably out. Let me know and we can go from there.

All equipment listed below was purchased New by me within the last 8 months. I have listed the price I paid and I am asking seventy-five cents on the dollar. You pay shipping & handling. The reason I'm selling is that I am starting a New expensive hobby and the boss says I can't have two expensive hobbies at the same time!

1). Icom 2710 with both optional modules installed.
UT-66 Voice synthesizer Cost $66.00
UT-84 Tone squelch Unit Cost $88.00
Expaned trans/receive mod done.
Paid - $854.00 Asking - $640.00

2). CSI CS900 Simplex Interconnect (Autopatch)
Paid - $360.00 Asking - $270.00

3). Diamond S/W power Power meter SX-400
Paid - $130.00 Asking - $97.50

4). Philips Antenna Rotor & Controller with Thrust bearing.
Paid - $90.00 Asking - $67.50

5). 4 way 25 pin A,B,C,D switch. Cost new around $45.00, make offer!
Paid - $45.00 Asking - $33.75

6). RF Concepts 2-meter Max-Amp-45 45/150
Paid - $290.00 Asking - $217.50

7). RF Concepts .70 centimeter 4-310-45 30/100
Paid - $340.00 Asking - $255.00

8). Two Icom Z1A's. All mods except 800 rec mod done, (Have transistors and intructions for 800 mod).
Paid - $355.00 ea. Asking - $266.25 ea.

9). Two Mirage BD35 144/440 amps.
Paid - $180.00 Asking - $135.00

10). Astron Power Supply with meter RS35M
Paid - $170.00 Asking - $127.50

11). Astron Power Supply RS20A
Paid - $100.00 Asking - $75.50

12). Pyrimid 8amp Power supply.
Paid - $46.00 Asking - $34.50

13). Maxrad mobile 144/440 mag mount antenna.
Paid - $70.00 Asking - $49.00

14). Crushcraft AR270B 144/440 omni directional base antenna
Paid - $100.00 Asking - $75.00

15). Crushcraft A270-10S 144/440 beam antenna.
Paid - $80.00 Asking - $60.00

16). Three Diamond 144/440 duplexers
Paid - $55.00 ea. Asking - $41.25

17). (PURCHASED USED) Kenwood 4100A (Have Manual)
Asking - $200.00

18). Lightning suppressor
Paid - $40.00 Asking - $30.00

From: tnic <tnic@styx.ios.com>
Message-ID: <58pg0r$9ko@nnrp1.farm.idt.net>
Source record: 188766

I dont think my first post made it to Cyberspace. If it did please excuse this second post.

I have been playing with a new Kenwood TM-V7A for a few days now.

The BLUE display which I was worried about looks great in real life.
The photos ont do it justice.

The display gets lots of WOWSs from passengers in my car. It has a dimmer contrast and reverse mode (to fight bordom I suppose).

The display looks far better than my old 733. The letters are much larger and easy to read while driving.

I am sure other new radios are also easy to use. You can use this one without manual after you spend a little time with it. The menus are very friendly.

The V7A scans memories 2 or 3 times faster than the 733 (my previous radio).
You can contol most of the functions right from the mike. Including changing bands, scanning, call channel changing to dual UHF or dual VHF, VHF and UHF etc.

It has 180 memories if you use the alpha name tags for the memories.
I like that best. Now I know what repeater Im on insed of memorizing the freq.
It displays both the Freq and name at the same time.

I dont work for Kenwood - this is not an ad.

But I plan to buy another one of these for the home base.

Source record: 188767

Hello,

I'm looking for some help on a Yaesu FT-757GX (not the GX2) transceiver with the slimline switching power supply. Is it considered a good radio? Any known problems with it? Is anyone else using this radio with a G5RV dipole? And is this adequate for multi-band coverage?

Does anyone know which issue of QST has the review for this rig? Many thanks.

Be certain you understand the levels before you connect your Kenwood alc
to a linear alc line. If they are not compatible, you will damage your
transceiver.

That is truer than you think. The exam pool for a pilot's license is fully available just as are the amateur radio questions. It is possible to memorize every possible question and answer. Of course, the written exam alone is but a small part of a pilot's training - it seemed to me to almost be an after thought where it is the only exam given for a ham radio license.

(THIS POSTING CONTAINS MATERIAL RELATED TO AMATEUR RADIO AND OR AMATEUR RADIO EQUIPMENT)

OK, Evan Platt haas gone after me like the indians after the cowboys, when they went west. BUT.....

Amateurs always cried about people operating ham equipment without a license. Well why does Evan have a Yeasu FT-50? Sure he can legally own it, but why would he want one without a HAM TICKET? He can not legally transmit anywhere with it, and in his postings he obviously admits doing so.

Evan has a campaign to ban me from this group, well I have sent letters to the FCC, posting notice that Evan operates the FT-50, in amateur frequencies, WITHOUT PROPER LICENSING, and operates the radio OUT OF BAND, in which it is not certified for use, the latter unfortunately being the larger offense.

So all you idiots who back up MR. Platt, I guess you agree that he should be allowed to operate in his illegal fashion.

Any one who agrees can see www.fcc.gov and email your complaint on Mr Platt.

E mail me and I will give you his home addresses, and any other info.

PROTECT YOUR AMATEUR RADIO RIGHTS.

From: mays@indigo
Message-ID: <58nj8h$7g@mark.ucdavis.edu>
Source record: 188867

Well.......... nancy.....
Actually there's more than one method for frequency inversion, but I'll write about a simple one. Your voice audio is combined with another "mix" frequency (usually much higher) in a circuit, typically a balenced type modulator/mixer. The LM/MC/NE 1496 chip is used in alot of applications. The output like the mixer of radio frequencies contain sum and differences from all the combinations.
A method of selecting one of the "differences" with "inverted polarity" is used, like a filter. This inverted information is sent on through the system over the normal path and similar mixing and filtering of the proper information gives you your original content or close to it.
Thats about as basic as it gets.
The problem with the "cheap" kits is the have little/no/very poor filters. One kit I have depends on the bandwith of SSB radio 300Hz to 3.3KHz to act as the only filter and it's "pretty cheezy." It's not worth the $29 I paid for it and it uses the LM1496 chip.
This is a very similar process to the generation of SSB in most radios, pick up an SSB CB radio from the 80's and you'll get an idea of what's going on.

Good luck, let me know if that's enough

Source record: 188873

Eric,

If you know how to operate a soldering iron, a screw driver and a coil tuning tool, you might want to buy the Ten-Tec 1208 transverter. It converts from 14 MHz to 50 MHZ. over at least 200 KHz bandwidth. Output is 8 Watts and the receiver fron end is very good. The cost is $95 US.

You should be able to work a lot of stations during an ES opening with just 8 Watts. If it is not enough for you, 624 Kits has a 100 Watt amplifier kit fior sale.

I have used mine for several months now and I am happy with it. I recently installed an AEA Halo antenna on my boat at about 8 ft above the water and managed to work California (DM03) with it. It is a distance of about 1000 miles from here. There was a brief ES opening that evening.

4662. Ham radio in 95 Olds Ciera/Buick Century

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-12 00:00:00 UTC
From: mcovingt@ai.uga.edu
Message-ID: <58o1rp$5vh@hobbes.cc.uga.edu>
Source record: 188874
Cross-posted to: rec.radio.amateur.equipment,rec.autos.tech

Has anybody here installed a ham radio transmitter in a 1995 Oldsmobile Ciera or Buick Century? Does anybody know if GM publishes any special specifications on how to do so?

Ordinarily I'd power the radio directly from the battery, which seems easy to do except for one thing -- there are no holes in the firewall that I can see. Oldsmobile used connectors on the firewall rather than running wires through holes with grommets.

Is there a hole I didn't see? Or do I need to make one? Or is it acceptable to power the transmitter from a 12-volt line in the dash, where the fuse panel is? (If so, which one?)

This would be for a 50-watt 2-meter (144-MHz) transceiver.

>the system can run off a battery...but the PC must use an UPS?

The other problem: watchdog timeouts, and other processor problems
that require rebooting a system take a fraction of a second on an Scom
or Link Comm, or something with a dedicated processor with solid state
memory. On a PC- even if you go with costly solid state disk
technology (rather than a physical hard disk like most use with the
PCRC) reboots mean the repeater is QRT for at least 15 seconds.

I had one of these, and although reboots were only occasional (and
often times due to beta software)- I considered this less than
acceptable. Audio qual is excellent, software upgrading is easy like
the all-mighty wanted, but the programming is quirky in comparasion to
Link, Scom, ACC, CAT or whatever else.

Gustaf, you are right to be apprehensive about changing the filter components in the IC706. However if you use a very steady hand it will be worth it. We modelled for a new rolloff freq of 175 MHz. New values are:
c153 2p2 c52 5p6 c53 6p8 c154 15p c152 18p
This gave good performance 60 thru 170 MHz with steep rolloff thereafter. Must avoid image response above 200 MHz hence choice of rolloff freq. Best of luck. 73, Ralph ZL1TBG.

>>assemble from a kit?

You will really like building this kit. It should not be your first
kit, as the unit is fairly complex.

I love my TT 2 meter. I always get good reports on sound quality, and
the 15 memories are enough for me. I only talk on three anyway.

The major problem in my book is the lack of scanning capability. I
talked to Ten Tech, and asked them for the processor code, so I could
implement scanning. They refused, but promised that they are working
on an upgrade to allow scanning. I am impressed! This feature alone
will make their radios in the very nice catagory. I have other
Japanese radios with so many features that you can't use, unless you
have the manual in your lap. The Ten Tech units are nice, simple, and
well designed.

The audio of my TT 2m rig is equal to or better than any other radio
on the market.

The tuneup process is critical to the proper input sensitivity of the
unit. If you buy one, I would recommend borrowing, or renting a signal
generator, unless you have a very good busy repeater nearby. I got the
sensitivety down to .18uv by using a signal generator to tweak the
coils.

Have fun!

They aren't "allowed" to post. Who is going to stop them? This is the
Internet, after all, which doesn't have any content restrictions. (Yet!)

>SELECTED ENFORCEMENT?

As noted above, "enforcement" is a meaningless term in this medium.
Anarchy reigns here, generally to good effect.

If, however, you're complaining about the ever-present flames
surrounding your postings, it may surprise you to find that if you
learned to use your CAPS-LOCK key, stopped threatening to sue everyone
who disagrees with you (Which, BTW, is illegal in many states in the US,
and opens *YOU* up to litigation), and think about the reasoning
behind USENET conventions (Like, for example, posting your
pager ads in appropriate groups), you might find us a wee bit more
appreciative. Of course, that means that you'll have to forego
trying to change your ReplyTo address in your mail client when posting
"supporting" comments. That little trick took about a third of a second
to figure out.

On USENET, you generally reap what you sow.

4684. Advice for a New Ham

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-13 00:00:00 UTC
From: John Figliozzi <johnfig@earthlink.net>
Message-ID: <32B0E447.5C37@earthlink.net>
Source record: 188681

Hello, All:

My son is 13 years old and very much interested in getting his license and start in amateur radio. We've consulted the ARRL and found a volunteer locally to tutor him.

My son seems most interested in HF. He wishes to make contacts around the world and is more than willing to achieve 5wpm code to be able to do so. Since it is nearly Christmas I would like to encourage his interest and find him a suitable "starter" radio--a transceiver I assume.

I've scouted some of the sites on the Net and looked in a handful of catalogs. The least expensive new transceiver I've been able to find is about $800, a little too much too invest at the outset I feel. I could go with a used unit and I've noticed there a few kits around starting at around $200 or so.

Can you give me some advice on these options: new, used or a kit? I'd like to give him something for Christmas.

Please feel free to reply in this group or to my e-mail address.

Many thanks in advance. Happy Holidays!

John Figliozzi

4686. Help With Yaesu FT-980

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-13 00:00:00 UTC
From: n3ab@prolog.net
Message-ID: <32b0b0f8.5495712@news.prolog.net>
Source record: 188683

I have an FT-980 that's about 10 years old that has had a problem since day one. When I operate FM on 10 meters, and I'm NOT running full power, sometimes, when I key the mike, I see the output power drop down then slowly recover. This whole ordeal lasts about 5 seconds then all is fine. If I run the radio wide open, there's no trouble. I have only noticed this on FM, other modes are OK. It does it into an antenna or a dummy load. My thoughts are that the ALC circuit thinks there is a problem at the antenna (relay too slow?). Per Yaesu's suggestion, I have replaced the antenna relay with no help. I have to admit I have not talked to anyone from Yaesu about this for a long time. Someone told me that one of the ham mags had a piece on this problem and how to fix it, but I have not found anything. I'm wondering if anyone knows of a fix or mod for this.

Also, has anyone had problems with the VFO locking up at a cold start? Mine seems to lock up for a few minutes. After this period, the dial works fine. When it is locked up, I still can enter a desired frequency manually using the keyboard on the radio.

Any help would be appreciated. Thanks much...

John N3AB....

It's a HUSTLER 4BTV (maybe a 5BTV). It might work fairly well on
10-40 meters, but it's worthless on 75-80. They're about $139 new
now.

Call GM first. Now a days just getting power to the rig is not enough.
Routing of the coax, keeping it away from various electronics controller
is more of a challange. Most US makers have dedicated RFI staff, most imports
just say dont use a radio...

4689. FT-570D

I'm thinking about buying this rig, and would appreciate any input from people who are actually using it...

I work only cw, and enjoy chasing dx when I can hear it...Is the receiver in this rig any good for weak signal reception?

I understand the DSP is in the audio circuit...what's your opinion of its performance?

Would you recommend either of the optional cw filters (I do a lot of 40 mtr and 80 mtr work with nearby carriers and noise).

I've read this months QST review, and came away still wondering...

I guess bottom line is: How do you like this rig?

Any help is appreciated. Here or E-mail as you prefer.

Thanks.

John

About the only thing you can do is look for another IC-245 that you can get the IC from. Remember the IC-245 was sold in 1975 so many of the parts will be difficult to get as the componet manufacturers no longer make the chips.

Sounds like an RF alignment problem. If that is the only problem band would
suggest finding a station near the dead spot and aligning that band only.

John:

That's great news about your son being interested in HF! I was about 13 when I became interested in radios. Some of the radios I used in the late 1970s make good bargans for the beginner. You have to be careful because there is a lot of "junk" on the market. I'm a big fan for paying a bit more, and getting a 30 day money-back guarantee as you do from the ham radio "stores" like AES. Check earlier news group postings; I believe that AES has been given a generally favourable rating for used equipment. If you have a local ham club in your area, they can generally steer you in a good direction for used equipment.

Here's my list of favourite starter rigs:

Kenwood TS-520
Yaesu FT 101 series (B, E, EE)
Kenwood TS-120
Kenwood TS-140
Drake TR4

The Kenwood 120/140 are all solid state, and a bit more expensive (probably in the $500+ range) The TS-520, Yaesu 101 are in the $250 to $400 range.

4699. ### Help with Motorola HT

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-13 00:00:00 UTC
From: 9v1zy@amsat.org
Message-ID: <32b457ad.4703395@news.pacific.net.sg>
Source record: 188696

I've got a Motorola AP50 that I'd like to connect my TNC to. However, no one around here would sell me the connector I need (the 'Accessory Connector').

Can this darn thing be purchased from Motorola as a spare part or something? Would someone be so kind as to provide me a part number, and where I might purchase it? Also if you've got any idea how much a beast like that would cost?

If not, can it be improvised? Anyones got the dimensions of this connector? (The accessory connector for the AP50 is the same as the GP300 and others similar).

When I've found the connector or something thereabouts, anyone knows how I can connect it up to a) My baycom modem, b) a MFJ 1270C.

Email replies appericiated. Thanks.

I don't think you understand how a newsgroup works.

(1) This is an open forum. No one approves or checks the messages before they get posted.

(2) This newsgroup is accessible from anywhere on the Internet. There is no "headquarters" or central office where control could be imposed.

4702. Help - PC/Rig interfaces

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-13 00:00:00 UTC
From: "Mike McAmis"
Message-ID: <58rto0$9ii@dartvax.dartmouth.edu>
Source record: 188699

I'm adding a new feature to my Windows logging/packet system XMLog. If you double click on a frequency displayed in the packet window (e.g. a PacketCluster DX spot) I set the appropriate mode/frequency for the rig.

I've got it working for my Kenwood 950 but I want to add support for other radios. Can anyone give me the commands and the port setup for other radios? For example, the 950 wants the serial port set to 4800 baud, 8 data bits, 1 stop bit, even parity. Commands to set the radio to 14.350 USB would be:

FA00014350000; and
MD2;

I assume (hope) that Kenwood radios other than the 950 use these same commands.

XMLog is freeware available at http://franklin.ptgi.com

Go out and read the ARRL review in January 1997 QST. Basically, it was
a very favorable review, with the DSP working quite well.

Date: 1996-12-13 00:00:00 UTC
From: bob Gross <rpgross@worldnet.att.net>
Message-ID: <01bbe946$02485d20$c05492cf@bobgross>
Source record: 188715

Hi, and thanks for reading this message.

A few months ago I bought a used IC-W21-AT. It seems to work ok but, italso seems to be a lot deaf in the weak signal department. With the wide band recv. capability, the display will go down to 60 MHz, but the radio will not hear anything below abut 115 Mhz.
Q?...Is that normal or is my radio sick.

At the upper end, the band from 860 to 880 MHz also will not hear anything and we all know there is plenty of RF there.
Q?> Is the IC-W21-AT locked out from that band, or is my radio sick.

Generally speaking, the radio also is less sensitive that any radio's I have compared it to in HAM bands.

If you have one of these radios, I would like to hear you reply so I can determine whether or not to send it in for svc.

Thanks Much 73's Bob KD4LGW

I'm wondering if anyone else has had the same bad experience that I have had with Marvin. He posted the above radio, I responded and said that I wanted it then he sent me a "corrected price" message which I now have to question. Again I responded and was going to purchase it at the higher price and he still seems to be playing mind games. He says that someone is ahead of me. Here is the letter he sent me, what would you make of it?

Rich,
I have to apologize for the (typo) mistake.. The TM-631A radio
should
have been posted with a price of $300 vs. $200. The $200 price
was
for the ICOM IC-229H that I am also selling.
As you were the third person to contact me, I wanted to give you
the
first opportunity at the correct price. Please let me know if
you are
still interested.

Sorry for the mistake.

Marty,

How did you address this message?

Use the same technique except put in the rec.radio.swap address.

I use Netscape, and would go to the Netscape News screen and select the "To:News" Icon to send out an article to a newsgroup.

4731. VHF/UHF mobiles for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-13 00:00:00 UTC
From: donh@cup.hp.com
Message-ID: <58s97c$1r9@hpax.cup.hp.com>
Source record: 188728

I'm getting out of VHF/UHF. I have the following for sale. This
equipment is located in San Jose, Ca. I will ship with whatever
method you would like. Price does NOT include shipping......

* - Kenwood TW-4000A (an oldee but goodie)

This is a dual band, 2 meters and 440. Two power settings, low is
5 watts adjustable to 10. High power is 25 watts. Frequency coverage
is 144.0 to 148.0, and 440.0 to 450.0. This unit is stock, no
conversions.

This rig is a 7 on the 10 scale. A few minor scratches on the case,
the front panel is good. This radio is built like a brick out-house,
it has performed to my high expectations.

The radio comes with......
* - The modile bracket
* - The MC-48 Microphone with built-in touch pad
* - The TU-4C Sub-Tone unit
* - 2 meter/70CM Duplexer (one antenna for 2m/70cm)
* - DC power cable
I also have the VS-1 voice synthesizer. It is not part of this
rig, I use it in my TS-940. I will include this option with an
increase in the price. This adds a nice touch to this radio,
can trunk this radio and the voice will let you know frequency,
repeater offset, and power status.

Features include 10 memories and dual VFO's with scan options. Also
has priority channel functions.

I am asking $300 for this radio.

Yaesu FT-270RH

This is a small 2 meter mobile radio. It is the high power version.
45 watts high, and 5 watts low.

Features..........
* - Tone encode/decode
* - DTMF support
* - Dual VFO, 10 memories.

Radio comes with........
* - Mobile mounting bracket
* - DC power cable
* - Wire table stand

This radio is a 9 on the 10 scale. It is very small and solid!

I am asking $230 for the Yaesu.

Please Email me if you have interest in the above radios. We may be able to bargin on the prices.

Regards Don WB6LPJ don@cup.hp.com

: italso seems to be a lot deaf in the weak signal department.

: Thanks Much 73's Bob KD4LGW

I have one of these and though it had never been opened the coax from
the antenna to the circuit board broke, poor solder joint I guess,
anyway the local radio store found it and fixed it for $30 or so.

I don't have wide band in it, but bear in mind just because the display can
count to some number does not mean the radio electronics can cover to
there. Filters and oscillators hav limits in there design that
precludes anyrange to anyrange without alot of complexity. You may be
seeing this.

Hopes this helps!

I think the price of the radio will come down. Presently, it is $1575
at HRO. The Kenwood TS-870 dropped in price from $2600 when it was
released, to $2200 present. Kenwood says that the TS-570D is replacing
the TS-450. The Ts-570D should be about the same price $1350. Expect
to see the price drop at least $150.

For those trying to find the IC, it is a 40 pin DIP with the following
on the top of the chip "ICOM 3062A NPC 7812".
The "do not open" label on the shielding case states that it is the
"ICOM C-MOS LSI for the Digital Phase Locked Loop" so my guess is
ICOM had this part produced in someone's fab, the stock is depleted,
and I'm SOL.

Thanks,
David

Well I was number 2 or three on the list...I called when I saw the
ad...then when he mentioned he must have posted low, I told him I would
still pay 300 for it.....but he NEVER mentioned he was gonna raise the
price OR offer it for 300 if the original buyer backed out...

So I guess Im NOT on the list...think I'll buy my gear somewhere else!

**** FOR SALE **** FOR SALE **** FOR SALE **** FOR SALE ****

Hi

I have an MFJ 1278BX Multi-mode controller for private sale, this is
an excellent unit with loads of features as follows :-

1) Modes :

AMTOR, PACTOR, RTTY, PACKET, ACSII, FAX, Colour SSTV, NAVTEX, CW,
Contest memory keyer, Modulated CW, MARS.

ASA - Automatic signal analysis (set the mode type automatically).

2) Mailboxes:

PACKET - 32K RAM expandable to 128/512K
PACTOR - 32K RAM " " "
Forwarding and reverse forwarding to your local BBS. (ie gets mail
from your local BBS and puts it in your TNC mailbox).

3) Baud:

HF PACKET - 300 baud
VHF PACKET - 1200 baud (expandable to 2400 or 9600)
Terminal to TNC baud rates upto 19200 baud (automatic)

4) Other:
Built-in 20 LED tunning indicator, Parallel printer port (on TNC!), 2
radio ports, TTL in/out, RS232 in/out, 2 manuals (very big), PSU.

This TNC has served me very well for about 12 months with no problems
at all and comes complete with the BOX and all MANUALS and LEADS as
original. They are currently selling for £339 at Waters & Stanton.

I would accept £200 'ono' and can post the unit upon receipt of
payment.

Thanks, Steve O'Malley (G7ANV)

: >test...Not
: >know the material.

: Gee, I hope the pilot of the next airliner I fly on didn't pass the
: FAA test the same way you passed the amateur tests...

Not quite, but close. They have to be able to solve simple
"weight and balance" problems. Most of the rest is simple
memorization of material. There are study guide that provide
question "pools" that are very close to the actual questions
used on the tests.

The hardest part is getting the several thousand hours of flight time
in as PIC. That is expensive.

Bill

4754. Re: IC245 PLL Failure

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-14 00:00:00 UTC
From: Bill Evans <bevans@ebsys.mb.ca>
Message-ID: <01bbe9e3$be14c1e0$36b270cc@kbabb.mbnet.mb.ca>
Source record: 188554

I posted an inquiry about 5 weeks ago querying repeated PLL board problems with my IC245. The value of the newsgroup concept was never better proven - I received about 10 replies - all referncing the disastrous design of the PLL board in this rig.

Apparently Icom used metal in the board that forms a corrosive electrochemical interface with solder and numerous junctions on the board are in constant, progressive deterioration. conclusion that I quickly came to is that this rig is a real lemon and investing any more time and/or money to keep it going is pointless. Sorry to bring such bad news - and thanks to all the others who rsponded to my plea for comments.

Get a GSI drive controller; they have an on-board BIOS that will make
your drive work just fine. Try the big mail-order computer shops; shoud
cost about $45.00 for a GSI model 21. I've used several for upgrading
old computers, and they work great. Of course, a new motherboard works
well, too.....

ASTRONOMY/SPACE ALERT FOR SOUTHERN CALIFORNIA
by Brian Webb, KD6NRP
Thousand Oaks, CA
102670.1206@compuserve.com

21:20 PST Friday DEC 06 1996

NO LAUNCH THIS MONDAY MORNING

The launch of a Delta II booster from Vandenberg AFB which was originally scheduled for this Monday has been delayed until the morning of DEC 22. As of Thursday, DEC 05 the Vandenberg AFB launch schedule is as follows:

Launch
Date Time/Window Vehicle Comments

DEC 18 08:30-11:00 Titan IV Classified payload

DEC 22 05:30 Delta II Launch of Iridium low-
altitude communications
satellite.

JAN 29 00:01? Minuteman III ICBM test launch

MAR 14 Minuteman II This launch will be ob-
served from orbit by the
MSX satellite.

MAR 18 Delta II

APR 10 Delta II

Launch dates usually change. Current information on the next launch can often be obtained from the Vandenberg Launch Update Line at 805-734-8232 X61857 (warning: sometimes this recording is out-of-date). For Delta launch vehicles, information is available from the Delta II 24-Hour Launch Information Hot Line at 714-896-4770.

HALE-BOPP OR HALE FLOP?

I observed comet Hale-Bopp on the evening of Wednesday, NOV 27. From light-polluted Thousand Oaks, I used 10x50 binocu-

lars to find the comet. It was low in the western sky and and looked like a faint, gray, wedge-shaped smudge. The tail wasn't visible, just the nucleus.

The comet wasn't terribly impressive, but we still have several weeks before Hale-Bopp is supposed to reach maximum brightness. According to information on the Sky Publishing webb site, the object is more or less brightening as predicted. Hopefully, it will live up to its billing and be a truly great great comet and not a flop like Comet Kahoutek.

Actually, they are the 'exact' questions, just like ham radio.

> The hardest part is getting the several thousand hours of flight time
> in as PIC. That is expensive.

A friend of mine that had been flying for many years once told me, "you know the great thing about flying is that is still costs the same today as it did 30 years ago - all the money you have."

Make someone's (or your) CHRISTMAS!!!!!

My wife doesn't use and wants to sell her Yeasu FT-50R dual band radio. Although she really likes how easy it is to operate, program, and the small size is great to slip into her purse, she wants to sell it. I think she is nuts!! She thinks its wasteful for her to have it just sitting around not being used. I have an identical model (not for sale) and I love it! As a matter of fact she did all the research and proved out that this is one of the greater handhelds on the market for the price, features, usability, etc.

The radio has a great receive tuning range, 76 thru 200 Mhz, 300 - 540Mhz, 590 - 999Mhz. Has a rechargeable battery capable of output of 5 watts. Comes complete as it did from the factory with box, manual, wall charger, etc. This is a very rugged, water-proof (to milspec) and durable radio.

She has added a Premier RD8 dual band antenna which works much better than the factory duck. NO INTERMOD!

She would like to get $250 plus shipping for the radio. If you are interested or want more info respond right away via email (dkvach@aol.com). This is a great radio for beginners.

Not sure if these qualify as BA tubes, nontheless, I have a pair in the Boxes, but think they are pulls. They were in with a large number of other tubes. How can I tell if the tubes are good? I can't find a tube base diagram, so not sure which pins are the filaments. I would like to sell them as pulls if they check okay.

Sure have learned alot here. Thanks for the help.

I own two of these fellows, one bought new in '83, the second in '84. One is run mobile cw, the other I use in the shack. Both have given very good service. The only real problem I've had is with the filter switching diodes in the front end of the rcvr. After having replaced many of them in the rig I run in the shack, I know remember to disconnect the antenna whenever I'm not using the rig, HI. Those diodes don't even like to smell a thunderstorm in the area.

My only real complaint has been with IF filter "blowby" when using the rig in the "CW narrow" mode. Some of the earliest rigs could be modified to help the problem, the later ones came "fixed" from the factory. It's just that the "fix" doesn't completely fix the problem. With a little practice, you can juggle the "shift" and "width" controls to eliminate all but the most perplexing QRM.

If you plan to use the internal keyer, check the June, 1989 QST "Hints and Kinks" where I detailed a simple mod to make the keyer much easier to adjust.

73,
Roger, WF4N

Sounds like they have ganged the RF gain control to the squelch knob to save cost. They should put more $$$ into better receiver front end's and reduce the IM instead.

Add a Plectron or Motorola Alert
Crystal Controlled Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. Although UHF versions were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

Source record: 188481

I have found that early models of the Paragron are prone to demonstrate a high processors noise level when operating the tuning knob. The noise is due to the amplification of processor pulses by U-10 and can easily be eliminated by tacking a 1000mfd @ 25V electrolytic across pins 8 and 4 of U-10. My fix has completely terminated the buzzing encountered while tuning the rig. In my case the noise was so loud that it blocked out weak signal cw stations. The serial number of the Paragon I repaired is 0200. I cannot guarantee that the addition of the electrolytic will eliminate all problems but sure worked on my rig. I accept no responsibility for results of anyone attempting this mod.
Ten Tec has been informed of my findings.

Well, the requirement for the highest level FAA license is still "only"
1500 hours and not all that has to be PIC (Pilot in Command) time, but that
can still take all the money you have and then some.

Source record: 188486

Hi Terry,

I've used both and think both have advantages and disadvantages. The NIR-12 has overall better noise reduction for SSB and can be set so agressively so that it reduces intelligibility (you can back off to your taste). The 599zx has much nicer controls and overall seems more flexible (especially nice is the AGC circuit). But it doesn't seem to be able to reduce static crashes as well.

Both do very well at reducing heterodynes, and seem to have comparable performance on SSB voice filtering - CW selectivity might gain the nod to the 599zx.

I think my casual opinion is that if one could combine the features (controls and AGC) of the 599zx with the (I think) superior noise reduction performance of the NIR-12 you would have a very good unit. To do this, I've run them in series (!!!), but the processing begins to show if you do much very aggressively in the units.

Bottom line is that I still use my 940 notch and internal filters and may wait for the next NIR with an AGC before plunking my $$ down.

Best regards,

David (K5KH)

Dear Marv and Don,

I've used both the NIR-12 and 599zx and think both have advantages and
disadvantages. The NIR-12 has overall better noise reduction for SSB and
can be set so agressively so that it reduces intelligibility (you can back
off to your
taste). The 599zx has much nicer controls and overall seems more flexible
(especially nice is the AGC circuit). But it doesn't seem to be able to
reduce static crashes as well as the NIR-12. I always ended up using the
NIR-12 when the crashes were killing me instead of the 599zx.

Both do very well at reducing heterodynes, and seem to have comparable
performance on SSB voice filtering (selectivity) - CW selectivity might
gain the nod to
the 599zx because is operates smoothly and will go down to 10 Hz (!!!). At
any significant code speed 10 Hz filtering is quite "mushy" and is likely
unusable, but its nice to have shuch selectivity available even if one
doesn't use it much.

I think my casual opinion is that if one could combine the features
(controls and AGC) of the 599zx with the (I think) superior noise reduction
performance of the NIR-12 you would have a very good unit. To try this,
I've run them in series with each other(!!!), but the processing begins to
show if you
do much very aggressively in the units (in terms of aggressive noise
reduction).

Bottom line is that I still use my TS940 notch and internal filters and
may
wait for the next model NIR with an AGC before plunking my $$ down.

Best regards,

David (K5KH)

Jerry,

I thought I was the only one in the world with this problem! I have a FT-8500 and use it exclusively as a base unit with the Yaesu FP-800 power supply. I've had the unit about 1-1/2 years now. About three months ago my unit started exibiting the identical peoblem. The reason that the memory channels and other settings stay in memory is that they are stored in an EPROM which requires no power of any type to maintain settings. There MUST be another battery or something that provides a bit of voltage to maintain current settings. I've studied the schematic carefully and had the radio apart, and I'll be darned if I can find ANYTHING at all resembling a battery also. Lately I've been thinking I should send the unit in for repair. Someone out there must have hear of a solution to this!

I ran a 757GX with a G5RV for about a year. You WILL need a tuner with
that antenna, but it works fairly well. The 757 worked great - the

biggest complaints I have are having to switch modes manually when switching bands, and there is no way to tune across a band quickly. Other than that, it is a great radio.
I think the slim power supply is not a heavy duty unit, so will not do well for 100% duty cycle modes (FM, AM, RTTY) but should work just fine for SSB or CW and will do fine in the other modes with reduced power.
The computer interface makes life easier - I built one and wrote a program for my PC to control the rig and it helped a lot.
Good luck and enjoy -
Ernie

My understanding, though I have not tested it, is that the transmit
side as selected by the bandsel will take whatever is coming in on the
pkt connector. You can feed the speaker of the passive side receive
in on the mic line in the packet connecter, perhaps.

I'm trying to receive packet on one side for APRS while using the
other side for a phone QSO, and my info is that I must feed the audio
out of the speaker to the TNC, and not use the output of the pkt
connector, as that will have the audio from the active side on it. OF
course, I will not be able to transmit pkt in this configuration.

From: putra@it.uwp.edu
Message-ID: <5923as$64f$1@news.inc.net>
Source record: 188506

For Sale:
Kenwood TH-22AT H.T. (2 Meters) THis is a sweet little two meter radio. Included in price is an MFJ Speaker-Mic, the Soft-leather (imitation leather anyway) case and a gold telescoping 2 meter whip. Have all original manuals and box, and will even throw in a variable power supply for running the rig from 110v. It has the original NiCd Batt, plus a dry cell pack. Everything is like new, the rig was bought by a friend new, but he lost interest after a while. I approximate the usage on the radio to be less than 2 hrs.

Asking: $195 Or Best. You will not insult me with a lower offer. (That is, one that is reasonable!)
Shipping is negotiable.

Thanks for reading

Source record: 188515

Hello to the group. I have a Yaesu 757GX and the slimline power supply, and find that both pieces of equipment work very well. The FT 757 has a good reciever and transmitter, but the CW selectivity is a little wide. I use the power supply to power the 757, my PK232, a TenTec 6m to 20m transverter, a HW-7, and for a while a TR7400A 2 meter transciever, and as long as I didn't transmit on the 757 and the 7400 at the same time, (I was on packet and 20 meters at the same time) it holds up well. The manual cautions against extended use of the switching supply, such as during RTTY and FM, but have had no trouble with either mod even during long RTTY ragchews. If you try to use the rear patch input for digital modes , you may run into RF feedback into the tnc, but this may be strictly a problem with the PK232. Overall, a heck of a good radio, and a very clean power supply. Hope that you find this helpful. 73 de Chris WL7PV

4828. Re: Kenwood 733 vs. Yaesu 5200 comparison

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-15 00:00:00 UTC
From: Dean Groe <dagroe@sundial.net>
Message-ID: <58vilm$bft@new1.sundial.net>
Source record: 188586

I went through the same debate about 8 months ago. I chose the Kenwood and am happy with it. I own two other radios, both Yaesu, so I'm not one of those people who only buys one brand.

I had a friend put the Kenwood on his bench and give it the once over. He's got ALL of the cool diagnostic toys! I was astonished to see that this radio was functioning to spec, even the receive sensitivity! This very rarely happens with modern HAM equipment. I had heard from others that the 733 was the way to go. The friend that did the testing for me, told me that he had tested a few of the 5200's and not been as impressed with them.

One of the things that sold me on the 733, was the remote mount capabilities. I could be wrong, but it seems like the 733 is a little more versatile in this area.

I regularly move the rig between cars and have had no problems, so far, with the RJ-45 MIC jack. One advantage of this connection, is that it is actually easier to work with than the DIN plugs. If you have a problem, you just simply crimp on a new end. This is much easier than working with DIN plugs.

I regularly drive through some "intermod alleys" and have found that the Kenwood handles them fairly well. The Advanced Intercept Point feature does a good job of limiting this type of interference.

I haven't used the cross-band repeat feature on this rig yet, so I can't comment on that.

Honestly, I think both are fine rigs. You just need to determine which has the right feature mix for you.

4829. WTB: Old SB-xxx chassis for homebrew project

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-15 00:00:00 UTC
From: gekko95@ix.netcom.com
Message-ID: <58vj6n$cj7@sjx-ixn8.ix.netcom.com>
Source record: 188587
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Hi! I just bought an old SB-102 chassis with all of the parts removed for $15 to use as a homebrew project chassis. I plan to repaint, and cover the faceplace with a new thin sheet of aluminum for my new rig to live in. (2 stage, 30 watt all band CW rig with built-in VFO)

Well, I need another and possibly 2 more - one for a matching receiver I'm planning, and another for a small amplifier.

So I am looking for ANY SB-xxx chassis, completely stripped of parts or not - don't care what the model was - even could maybe use smaller boxes, like old SB-610 scopes or speaker boxes, or whatever. Again, I am after the boxes and the innards are not important (although if any parts still remain, they would be put away for future homebrew)

Cheap is kind of important, though. That's why I am specifying no parts and looks are unimportant, as long as no dents or cutouts that would be tough to paint over. $10 to $20 is the range I was thinking.

email to Dave gekko95@ix.netcom.com

Thanks to anyone who replies!

Message-ID: <58vl3k$kch@nnrp3.farm.idt.net>
Source record: 188588

I like mine. I think the display looks great in all but direct sunlight.
The radio is very easy to use partic. in a mobil. You can control
most of the functions from the mike.
The audio beeps are all toned so you can figure out whats happening from
the road.

By hitting a mike button you can change to dual 2 neter or dual 440.
Scan is very fast.

There is an intermod mode which reduces intermod. I live a mile from NYC and
intermod is a problem on any radio I have owned. This one is no exception
but its better than the Kenwood 733 I had been using.

The AM scan works well. I pick up airports and jet flights.
I can also scan the police and fire freqs. Thats the benifit of a wide
range receiver. I would rather have that capability even if it means some
intemod.

The built in CTSS ENCODE and DECODE works well. When you hear a station
you press the button and it scans through the CTSS tones. If the station
stops transmitting TONE scann stops and waits for them to resume. When it
finds the right PL it beeps and flashes the PL for you. Makes life simple.

Im running the detachable head in the cockpit and the radio in the trunk.

If you havent been able to tell... I really like the radio.

Well, Gosh John, I guess if you had taken just a moment to read the
manual that you were refered to, you would have seen that the NEW PART
NUMBER was REX1090A. NSO of $43.25, list of $60.25. NSO will be
$45.00 as of the first of the year.

And, if you took that a step further, and checked PARTSNET, you might
have even found that Motorola has SCADS of this part in stock!

But of course, you would rather take the oppurtunity to tell me all
about your clues!

From: redoutey@bga.com
Message-ID: <58vube$cfk@news3.realtime.net>
Source record: 188598

I am looking for the power connectors for a couple of older rigs.

KLM Multi-2700. It takes a square-looking connector that Radio Shack use to sell a few years ago. Must be some out there.

Kenwood TS-820S. Complex connector. Does anybody know a source?

I have the manuals for both radios, but the connectors got tossed in a move some years back. Also looking for the connector for the External VFO on the Kenwood TS-820S. (9 pin tube type style).

Any help, ideas, would greatly be appreciated. Trying to clean up these new additions for a friend.

Thanks,

It is two times bigger than the FNB-41. Since there is no belt clip on it
is very heavy to carry around. It makes a good backup battery though.

For the same price, you can get a FT-50 (Yaesu) brand new.
http://members.gnn.com/hca/ft50/index.htm
has some good info on it. I'd go over features to determine which
radio you buy. The Ft-50 has a few the 79 doesn't, but so does the 79.
The 79 can recieve two freq's at once (like having two scanners), the
79 can do x-band repeat, but the 50 has more features (extended
recieve out of the box, 76-999, etc... 112 channels, DPL... digital
voice..

My job is communications. I need a field and computer programmable
radio with wide band recieve, PL, DPL and DTMF capabilities. Do you
know of any scanner that fits the bill? Nope, neither do I. So I have
a nice scanner. If a scanner did all I need it to do, I'd have the
scanner. I do plan on getting licensed, just deciding on code or no
code.

>Evan has a campaign to ban me from this group, well I have sent letters to
>the FCC, posting notice that Evan operates the FT-50, in amateur
>frequencies, WITHOUT PROPER LICENSING, and operates the radio OUT OF BAND,
>in which it is not certified for use, the latter unfortunately being the
>larger offense.

To get the FCC in action, you must prove someone did something. I have
not transmitted on the FT-50. And you can use the FT-50 to RECIEVE
whatever frequency you wish, even in front of the FCC Directors face
(except 46.63 - 47 and 870 - 890, of course)

>So all you idiots who back up MR. Platt, I guess you agree that he should
>be allowed to operate in his illegal fashion.

If scanning is illigeal, arrest the planet.

>Any one who agrees can see www.fcc.gov and email your complaint on Mr
>Platt.
>
>E mail me and I will give you his home addresses, and any other info.
>
>PROTECT YOUR AMATEUR RADIO RIGHTS.

I agree 100%. I think amateur should be licensed. Keeps the idiots
out. Of course, me and mr. Klien have signed a truce, so this is just
a open discussion now..

Source record: 188613

I am looking to buy either one of these units, but would like some feedback from some current users. My main use for the unit will be on CW and there mainly for random noise reduction, I am not really too concerned about the bandwidth filters. I want to "clean" up the audio, and reduce the atmospheric and other random noise and be able to copy weak signals. Also am concerned about the amount (if any) of audio amp noise in the filter (HISS). Thanks! Please email info directly. I will post the results.

4859. Yaesu FT-8500 memory loss

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-15 00:00:00 UTC
From: jcupples@iphase.com
Message-ID: <jcupples-1512961014250001@ipm6-175.flash.net>
Source record: 188617

Hello,

My 9 month old FT-8500 dual band mobile xcvr has worked well.

Lately, it seems to have some problem with its memory:

Wehn powered off for a few hours, it will come back in what appears to be factory default mode. By pressing D/MR and going to the memory banks, the programmed memories can be restored, but it is annoying that the volume and squelch settings and the VFO must all be re-set. This is not the way it used to work, it would power up in exactly the setup last being used, with all displays and settings unchanged.

I called Yaesu and talked to a lady in customer service who listened, and gave me the old "Twilight Zone" (you are the only person in the universe with any such problem, and it cannot be explained by existing science) in a more roundabout way. She wanted me to send it in a wait a few weeks - it's under warranty.

She said it could not be a battery, since if the backup battery were out, the stored memories would also be gone.

I can't see any battery in the schematic, anyhow; but it seems to me that if the circuit is designed such that the programmed memories are stored in a different type of digital memory than the VFO and op settings, it could happen the way I see it. I'd rather spend an hour and a few bucks to fix it here, unless it is risky or very difficult.

Anyone else seen this?
Is there a battery in there I can easily replace?

regards,

Jerry Cupples KC5SXA

rEAD THE jANUARY QST "Icom" advertisement as well as the AES ICOM PAGE
in QST MAGAZINE. It says "no AM mode on 2 meters" or "ALL MODE on
160-6 meters and no AM mode on 2 meters."

4863. WTB: Old Heat SB-xxx chassis for homebrew projects

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-15 00:00:00 UTC
From: gekko95@ix.netcom.com
Message-ID: <591b63$npi@dfw-ixnews2.ix.netcom.com>
Source record: 188621
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Hi! I just bought an old SB-102 chassis with all of the parts removed for $15 to use as a homebrew project chassis. I plan to repaint, and cover the faceplace with a new thin sheet of aluminum for my new rig to live in. (2 stage, 30 watt all band CW rig with built-in VFO)

Well, I need another and possibly 2 more - one for a matching receiver I'm planning, and another for a small amplifier.

So I am looking for ANY SB-xxx chassis, completely stripped of parts or not - don't care what the model was - even could maybe use smaller boxes, like old SB-610 scopes or speaker boxes, or whatever. Again, I am after the boxes and the innards are not important (although if any parts still remain, they would be put away for future homebrew)

Cheap is kind of important, though. That's why I am specifying no parts and looks are unimportant, as long as no dents or cutouts that would be tough to paint over. $10 to $20 is the range I was thinking.

email to Dave gekko95@ix.netcom.com

Thanks to anyone who replies!

>
> How much $$$?

It still gets intermod. I live a mile from New York City. Tall buildings with loads of antennas of every kind. At home I use a "notch" filter for 440. The notch filer costs $66 and elimintate 98% of intermod. My hand held Yeasu FT-50R was just about unuseable at home on a roof antenna without that filter.

The V7A is slightly better than the 733. Its much better on the display and programing.

When you go to add a channel to memory on the V7A it displays a triangle that is empty if the memory is empty and solid if the memory already has something in it. Helps prevent memory overwrite.

Also the characers are much larger on the V7 you can actually read them while driving.

When I got the V7 I moved the 733 indoors on a power supply. That gave me a chance to explore all the features on the 733. The 733 has loads of great "stuff" you can do.

The 733 has all that wrapped into an easier to use better display.

Has anyone ever used the 733 with one channel for packet and one for voice?

Thanks
=TOM=

Dick, I have used DX4WIN for a year now and like it very much. It
is easy to use and will import other logging programs files if you
have your logbook antered into another program. It must be run under
windows.

4867. Ramsey QRP pair for trade (or sale, I suppose!)

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-15 00:00:00 UTC
From: gekko95@ix.netcom.com
Message-ID: <591dgg$npi@dfw-ixnews2.ix.netcom.com>
Source record: 188625
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have a Ramsey HR-40 all-mode receiver and a
Ramsey QRP-40 1-watt QRP transmitter with a
crystal for 7.035, which with the VXO gives
7.033 to 7.039 operation. XMTR works
fine. Rcvr is not so hot, but a good tweaker
would be able to make it work pretty well.
Could use an RF stage, I think.

The transmitter is in a nice little aluminum box,
the receiver is just the PCB.

Have both original manuals. Both kits are assembled
(not by me).

Trade for homebrew parts - tube sockets, variable caps,
AC power transformers for tube projects, coil stock,
vernier knobs, HV transmitter caps, etc. etc. Anything
you have considered. Or $35 (yuck - who wants money!
I want parts!!)

AC transformers especially welcome! (300 to 1000 vac CT)

email to Dave gekko95@ix.netcom.com

The initial "feel" of the New IC756 is good TX/RX audio is gud with nice reports being rxd.
You cannot monitor dual watch out of band, it has to be the same band.
DSP is nice with the NR cct, and TX audio can be tailored.
another great seller?.....quite so!

> I did not see it on the Kenwood web page any more http://www.kenwood.net

You may be right. I just bought the 733A with duplexer & lighted mike
from AES for $399. My son has the same rig. I also have the Yaesu 5200.
They are both top notch rigs.

The 5200 is easier to use out of the box without looking at the manual,
but Kenwood has a better idea in the remote mount.

When the Yaesu 5200 is remotely mounted, the front panel cannot be
removed from the vehicle without removing very small screws and
losing them. The 733A panel snaps off the base unit OR the remote
mount. In addition, the Kenwood is easier to pop off.

Message-ID: <01bbebaa$44596ea0$7370dacd@default>
Source record: 188381

I posted a message yesterday but have not seen it appear yet. I just received my new ICOM W32A
today and need any mods and hidden features lists. I know that there is a 800 MHz mod and I really want that one since I am in the 2-Way business and have many 800 MHz customers.

I have looked at several WWW mod sites but find nothing on the W32A. I know that it can be done since someone locally (at a ham shop) has one modified but he wants $$$ to do the mod himself. Sorry but I rather "hack up" my own HT myself!

I have for sale a great satellite rig. It is the Yaesu FT-726R with the 430 cm. and 2 meter modules. It also has the rare satellite IF. This rig is in excellent condition.

Since I do not have the time I had planned for the sats, the transceiver may as well be in the hands of someone who can put it to good use. I need $775 plus shipping. Please contact me if you are interested.

Please be patient if you email me after Friday. I may be somewhat slow to reply due to infrequent checking of my mail during the holiday period. Thanx for reading my post. Dale

Source record: 188386

Hi Jack:

Tell your friend that a former Alpha 87 owner would advise him to be cautious. For an amp that cost that much, it does have some characteristics that bothered me. Don't worry about the PIN diodes. I haven't heard of one report of a failure in a 87. In an 86 yes but not an 87. That is one of the things that I liked about the unit, absolutely silent TR switching. My biggest concern is that Alpha is playing the technology of the automatic tuning very close to the vest. If it breaks you'd better be prepared to pay big bucks and send it to Alpha for repair. The processor that drives the tuning mechanism has no significant domumentation. An average ham or even most hams do not have a way to repair it themselves. If you would like further information, I can list all of the things that I didn't like about the unit. Just send me an EMAIL if you would like anything further or have any specific questions.

The recommendations I would make would be a Commander 2500, a QRO 2500, an Ameritron AL-1500, a Titan. The Commander and the QRO are top notch!

The sysop of a local Las Vegas packet BBS, has shut down the board because of lack of interest. I guess the internet is taking over. Anyway, he has alot of equipment for sale.

Kenwood 3530 220MHz $285
Alinco 1200 data radio $150
Azden 7500 6m $250
KPC 9612 TNC $175
KPC 4 DUAL PORT TNC $150
MFJ 2400 BAUD TNC $100

These are commercial radios that are being used for amateur use on packet.

GE EXEC II Table top model w/built in pwr supply 100w crystaled on 439.00 $100

GE MASTER II 110w crystaled on 145.050 $100

The exec and the master are 1200baud and paired up to the KPC 4 right now.

GE EXEC II crystaled on 145.69 100w $100 table top w/built in pwr supply

Motorola MCX100 VHF 35W Has commercial and Ham freqs in it. $100

One true Hayes 14400 ext modem which was used for phone port into BBS $50

All this equipment can be purchased individually or if you want to start a complete packet bbs, here's all the gear to do it. We will sell it seperate.

All prices are etched in stone as single items, but if you want multiple items the sysop might give you a bargain for buying more than one.

You can call me at 702-453-0821 any day but Sunday between the hours of 5pm-8pm pacific time. We will pay for shipping.

73 to all and Happy Holidays....N7RCM

From: donh@cup.hp.com
Message-ID: <594g5e$rff@hpax.cup.hp.com>
Source record: 188393

I have a Cushcraft 5BTV vertical. Has been down for about 7 years.
The present state is unknown, was working fine when taken down.
Not much to go wrong, traps may need some clean-up.

This is 10-40 meters. There is a capacitance hat which is broken.
This is made up of four pieces of small tubing that streches out
horz about 24 inches. Can be easily rebuilt using old TV antenna
parts.

I am asking $75.00 for the antenna, local pick-up only in the Bay
area, San Jose to be exact. Will be happy to answer any questions.

Regards Don WB6LPJ donh@cup.hp.com

4886. Re: Uniden BC-760 PL ?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-16 00:00:00 UTC
From: n9jig@TheRamp.net
Message-ID: <n9jig-1612962310390001@mund-ip-2.theramp.net>
Source record: 188394
Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment

The answers given to the questions below refer to the newer BC760's (with the BNC antenna connector). Older versions (with the "Motorola" style antenna connector worked differently). The type currently sold are of the newer/better version.

In article <58a60v$oa1@violin.aix.calpoly.edu>, kjsmith@violin.aix.calpoly.edu (Kirk James Smith) wrote:

** I'm looking at buying a new scanner for my truck, and the Uniden
** BC-760XLT is the only one that will fit (sigh). I'm hoping to replace a
** RS Pro-2026.
**
** I'm considering this scanner because of the PL option, as it should serve
** to eliminate interference problems I'm having. I attempted to call
** Uniden Customer Service for clarification of this board, but they were
** WORTHLESS (and rude).
**
** I'm hoping someone on the net with this configuration can help.
**
** 1) If I have the tone board installed and turned on, can I program different
** tones for different channels.

Yes, any PL can be programmed into any memory. Also, the PL can be left out for CSQ receive.

** 2) If I have the tone board installed and turned on, can I program certain
** channels in PL decode mode, while others remain in CSQ (carrier squelch,
** no PL) mode? Uniden said no, it's all or nothing, but I have a hard
** time believing I can't just enter "0" for the PL for that channel.

Yes you can either skip the PL entry and move on to the next channel, or enter "0".

** 3) If the scanner stops on a channel with the wrong PL, squelch won't open,
** but will it sit there until the carrier drops, or interrogate the PL,
** determine it's the wrong one, and then resume scanning?

If the channel is active without the correct PL, the radio will resume scanning. The delay is barely noticable.

**
** Simple questions, or so I thought... Uniden was trying to tell me that
** only channels in the 460MHz range had PL, and other such nonsense. I
** wish I could blow them all off and install a Pro-2006 (sans PL, but the
** triple conversion would do the interference elimination trick), but the
** 2006 is simply too big to fit in my small truck (Isuzu Trooper).

**
** Any help would be most appreciated.
**

I tried to buy the DSP599ZX in October at HRO in Sunnyvale, but Timewave
doesnï¿½t deliver! None of the HRO stores had it in stock and no
deliveries had been made for several weeks! The shop owner suspect some
problems with the equpiment. Performance is quite equal to the 599+,
only dispaly and braoder BW differs. Noise cancelling should be equal.

4890. Re: FT-570D

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-16 00:00:00 UTC
From: Rick Lapp <rickl@unix.asb.com>
Message-ID: <E2I6n7.4u3@nonexistent.com>
Source record: 188432
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.misc

These are my Impressions of the TS-570 after a day or two at the controls. My thanks to Joe, W2HPM who also spent some time with me reviewing this new Kenwood.

I'm comparing the radio based on others I have owned: 940, 765, 850, Omni6, 450, 50, Delta2, and a 706. I've also operated the FT-1000 enough to compare it to the others.

The radio was setup by removing all the connectors from the 450 and simply plugging them into the 570. Only the CW jack changed from a "phone jack to an 1/8" mini which was quickly fixed with an adapter. The amplifier keying and PK232 interface all worked exactly as they did on the 450.

The LCD display reminds me most of the IC-728. The numbers are large and easy to read. The backlight is adjustable via a menu selection. The meter is a nice compromise between an analog movement and a bargraph, since the LCD segments are laid out in a radius, resembling an analog movement. This is a simultaneous
S meter, power level, SWR, Compression level and ALC. It looks like the audio level function in the 450 was left out of the 570 meter. The peak hold function works well. (2 segments remain at the peak level for about .5 secs.)

The front panel is well laid out. It's exactly the same size as the 450 but MUCH easier to operate. The location of each of the buttons has been well thought out for operator convenience or efficient contest operation. The buttons are rounded rubber, not the squared off plastic and metal ones on the 450 and 850 and 940. The buttons are divided into groups depending on function. Each one of these groups has a different shape and feel - a nice touch for the sightless or sleepy contest operator who has his eyes on the monitor and only his left hand on the controls. The buttons work easily and don't take much effort. This was annoying to me on the 706, Delta2 and Omni6 which take entirely too much pressure to make contact. This is an important point for contestors.

Joe pointed out that a "reminder" LED was missing from functions like notch (beat canceler and noise blanker) although the LCD segments for these functions are of good size and difficult to miss.

The receiver was compared side by side to my 450. Without doing extensive lab tests with a signal generator, it's seems that the receiver is somewhat more sensitive yet quieter from phase noise. I didn't seem to need the pre-amp in situations where I needed it with the 450. The Noise Blanker seemed effective to pulsing noise and compared to the 450, did not cause the usual distortion on strong signals or strong adjacent signals.

IF shift control works well and I'm please to see it with a center detent, like the 450. I tend to leave mine a few degrees off center which seems to emphasize the lows of a SSB signal, making the signal sound "full".

The memory channel selector knob doubles as a menu selection control. The following functions are not controlled by the menus but can be individually controlled with this "multi" knob: mic gain, pwr level, keyer speed, vox/break-in delay, and bandwidth selector.

The menu function is extensive, yet fairly easy to use. It is similar to the 450 and 850 but has an alpha numeric scrolling display describing the function so you don't need to constantly refer to the manual. We were able to set and control most of the menu driven functions for the first time without referring to the manual.

The DSP function is in both the transmit and receive audio circuits, not in the IF like some of the other radios currently on the market. There are advantages and disadvantages to both techniques and Kenwood has chosen to put it in the AF. I think this was good choice, although I haven't compared it to an IF DSP radio. The complaints I've heard about transmit and receive audio distortion in the 870, appear to be non existent in the 570. Both transmit and receive audio are clean and non-distorted. Even with the DSP beat canceler or DSP Noise Reducer functions on, receive audio is still clean, although it is possible to hear a hint that the audio is being "processed". There is no comparison though to the distortion introduced in the audio through the low end Radio Shack DSP unit. There are two NR selections. NR1 and NR2. One is used normally for SSB and the other for CW. These tend to reduce background "hiss" and is a separate function from the Beat Cancel which works well on SSB. Kenwood could have had the NR1 and NR2 functions automatically selected depending on mode selected, SSB or CW. I don't know why they didn't do this. I'm mostly a CW operator and the NR2 works well but may not be that pleasing to listen to while copying CW at over 40 WPM. There is just a hint of rising edge distortion as the DSP does it's work. What is impressive however, is the "hiss" reduction with the NR function enabled. The receiver is

almost completely quiet except for the desired signal. It would be interesting to compare this DSP with one of the high end external DSP units. The Beat canceler does a fine job of eliminating heterodynes on SSB and does not add any objectionable distortion to the received audio.

The CW tuning is cute, but I'm not sure how often I'd use it. Perhaps new operators or contestors would find more use for it than I would. I suppose my ear has enough training and experience where I don't see that it's necessary. It is not as precise as I thought it would be as it usually comes within 10 or 20 Hz of the correct frequency depending on signal strength, QRM or keying speed.

I installed the 8Mhz, 500Hz CW filter in my radio. It appears that there is only one spot for this additional filter - I would not be able to install a 1.8Khz filter with my CW filter installed. I don't see this as a problem since a combination of the DSP slope tuning and the IF shift does an adequate job.

On CW, the IF filtering works well. There is a filter bandwidth control that controls the DSP AF bandwidth. The DSP bandwidth is variable from 2.0Khz to 1.0Khz, 600 Hz, 400, 300, 200,100 and 50 Hz! The resulting combination of 500 Hz IF filter and DSP AF filtering reminds me of the Jones Filter arrangement that Ten-Tec put in their Delta2 transceiver which was continuously variable from wide down to less than 100 Hz. I found it difficult to find a crowded portion of the band where the 570's IF and DSP AF filtering could not effectively knock out adjacent interference. Compared to my 450 which had both 8Mhz and 455Khz, 500Hz CW filters, the 570 seemed to be cleaner with less "ringing" while copying CW at narrow filter settings.

The automatic antenna tuner seems to do a good job of matching the radio on any band to my 80 meter dipole fed with ladder line through a 4:1 balun, although the 450 never had a problem either. The "AT Tune" function is different than on the 850 and 450. Kenwood saved the "Auto/Thru" button and put both functions on one button. Depressing the "AT Tune" button toggles the tuner on or off. Holding it down for longer than a second, starts the tuning cycle. The tuner sounds much different than previous Kenwoods. Rather than hearing the whirring of a motor, it sounds more like a relay chattering. It took some getting used to. I'm curious what they did different with the tuner that makes it sound like this. The tuner, like previous radios, memorizes settings for each band.

On Pactor, Amtor and RTTY, the radio performed well. The variable bandwidth of the DSP filter is a nice feature when

operating on the digital modes to knock out any adjacent frequency QRM. On transmit, I was able to operate at 100 Watts key down on long FEC and Baudot transmissions with no temperature excessive rise. The radio seems to handle this 100% duty cycle operation. A nice feature for the digital modes are menu selections to vary BOTH the audio input and output from and to the TNC.

On CW, the 570, in my opinion, is the best Kenwood yet that I've operated. My criteria for CW operation is mainly how smooth the transmit to receive transition is, how smooth the sidetone sounds and any audible noise or clicks from either the speaker or relays while on QSK or semi-QSK. The amplifier keying relay is easily enabled or disabled via a menu selection and with this relay disabled, the radio is very smooth and quiet in QSK. During QSK, you have to strain to hear a small, perhaps reed relay. I heard very little, to no difference in another receiver while switching between semi-QSK and full break in while sending a string of dits at 50+ WPM. This is a test that Joe and I usually run to see how good the QSK operation is and essentially duplicates the CW dual trace scope photo you see in the QST rig reviews. On QSK, I would rate the 570 second only to the Ten-Tec Omni 6 for silky smooth QSK operation and nice sounding CW on receive.

Although the AF output stages are spec'd at 1.5 Watts for the 450 and 570, the 570 seemed to have somewhat less audio drive into my external speaker than the 450. It's not a problem since I never seem to run the audio gain up less than 10 or 11 o'clock . The audio quality on SSB and AM was clean and comparable to the 450.

We ran a number of transmit audio tests on 75 meter LSB. Using a Radio Shack Highball mic, the consensus was that "High Boost" transmit audio equalization, and the mic gain at 40, seemed to work best. A half dozen critical ears on the frequency preferred the 570 over the 450 for transmit audio quality.

Hi..
A friend of mine (he isn't on the Internet) is
thinking abouting buying an 87A and is looking for
critical comments from owners, current or former.
He understands the unit did have some problems with
PIN diodes prior to 1991. If you would like to add your
two cents worth (make that a nickle with inflation) please
do so. I will forward your comments to him.
Tnx es Happy Holidays...

> Marv WA2BFW

I'm VERY sorry that Rich took this the wrong way, and that he sees fit to post such a message here in the newsgroup. There was NEVER any intention on my part to play ANY type of mind game. If you look at my original message on the radio you'll see that as I said above I also posted an ICOM 229H for sale the same day..for the same price.. Now I don't think that most people will assume that a dual band radio will sell for the same price as a single band one. Unless it is in VERY POOR condition (which this radio is not). I simply made a typo when entering the message.
To be fair I contacted the first 3 people who called me about the radio and informed them of my mistake, and asked them if they wanted the radio at the corrected price. As the message clearly says above, Rich was the THIRD person to contact me. As it turns out the first person was no longer interested but the second person wanted the radio. In fairness thats who bought it.. I don't think that constitutes mind games at all. I proceeded in the order in which inquiries were made. I believe that Rich is just upset that he didn't get the radio, to his credit, being local he offered to come and get it and bring cash. That wasn't the issue, in my mind I sold the radio on a first come,

first serve basis. If thats not the best way to do things then I'm sorry and I apologize.
I hope that Rich will make the same apology here in the newsgroup as well. This was my first time selling anything via the newsgroup, I'd hate to think every posting here is going to be attacked when a mistake is made. Maybe fleamarkets, hamfests, and sales to dealers is the only way handle things. If it is I think it's a shame and we all lose in the end.

If you look at the other prices in his original post, they are all in line
except the TM631. I think he made a mistake and sent a message correcting
it - nothing more. If he really wanted to "play mind games" he would
have said $325 or more to see how high he could get that price with all
those fish on line. ;-)

One time I thought I had made a mistake, but I was mistaken.

Don is exacly right and brings up another T/O point - similar happenings on AM - have seen a number of T/Os that have had the WaveMagnet cord (one with the red plastic diaper that plugs into the chassis) that apparently were yanked out of the plug and soldered back reversed. This is a no-no. On a -600 if you pop the WM out of the case and flip upside down and reception improves dramatically on BC - this is the likely culprit - check for melted plastic and solder blobs on the plug.

From: chambers@pubtool.com
Message-ID: <chambers-1612960949000001@w9.itis.com>
Source record: 188443

I recall messages a while back that owners of the FT50R could not get the radio to receive a page and then record the incoming audio into the DVR. I am having no problems doing just that with my new one (serial #6K111542) - they are including an errata sheet on the VMPS (Voice Mail Paging System) that updates the instructions that are on pg 47/48. Perhaps they have also made a firmware change that addressed this as well.

I am looking to buy either one of these units, but would like some
feedback from some current users. My main use for the unit will be on
CW and there mainly for random noise reduction, I am not really too
concerned about the bandwidth filters. I want to "clean" up the
audio, and reduce the atmospheric and other random noise and be able
to copy weak signals. Also am concerned about the amount (if any) of
audio amp noise in the filter (HISS). Thanks! Please email info
directly. I will post the results.
> Tim
> NZ8J

Tim:
I can give a vote of confidence to the NIR-12 unit. It will clean-up
just about any noise in the audio. I use mine with a Kenwood TS680
during contest time, and it's a godsend. Be careful with the controls
on CW; you could mask out the tones you're trying to hear along with
or even instead of the noise you want to get rid of. Read the
instructions carefully!
A word of warning: after a couple of hours, the box will get very
warm to the touch. Don't think it's a problem, just provide for some
air movement around the piece.
There doesn't appear to be any noise from the audio amp output from
the NIR-12. You'll probably have some noise left as artifacts of the
filtering process, but that's about it.
Oh yeah, almost forgot. Use shielded cable for all connections, even
the DC power. This will stave off rf feedback.

David,

Contact your local utilities company. They often have drilling rigs to put down telephone/light poles. I use one from a private electrical contractor. Please be careful on your "new to you" tower. Contact the manufacturer for proper guying procedures/anchor specs. Please inspect it very carefully for rust, corrosion, etc. Check inside tubes if not solid rod. Update life insurance policy!

I own an NIR-12 and find it to be very effective. However, I have had to purchase a symetrix SX-201 parametric equaliser to restore some of the 'edge' that is lost after heavy processing. The unit (NIR-12) seems really well built (inside and out) and is quite nice to use (i.e. the feel of the pots, weight/footprint/layout of controls etc).

Here's a link to the Symetrix, if anyone is interested:

http://www.1212.com/equipmentaudio/dealfr/auvione/symetrix/indexsymtrx.html

Any of several solutions come to mind. The folks that dig septic
tanks have equipment to dig holes like what you describe. They are
usually quite reasonable. Any good backhoe service would be able to
dig it for you. The folks who dig piers for house foundations also
are able to move dirt.

I had a tower base dug, and the cost was only about $50 from scratch.
On another job, where the machinery was already present for another purpose,
it was a "freebie".

Good luck es 73 de W5GFE

The only radio I know of by that name is a Ten-Tec Century 21 with digital readout. It's a ham band only transceiver, and not just a receiver. It transmits c.w. only, but recieves ssb ok too.

Unless there's another radio around I haven't heard of yet (entirely possible) with the Century 21 name, I don't believe what you have is a short wave receiver in the sense of general coverage of the short wave bands...but I could be wrong...

Anyone else know of a shortwave receiver called a Century 21?...

John

>Has anybody here installed a ham radio transmitter in a 1995 Oldsmobile
>Ciera or Buick Century? Does anybody know if GM publishes any special
>specifications on how to do so?

Yes, GM publishes a guide on how to wire mobile radios. I have one
that is dated June, 1992. Mine is a black & white pamphlet which
is 4 pages long. I agree with the other poster who said you should
call GM directly; they may have updated that pamphlet. If you don't
have any luck, I would be willing to send you a photocopy of the
one I have.

Mark

p.s. to answer your question about holes through the front of dash;
you will need to drill a new one for your radio wiring. Bulkhead
connectors seem to be used by about every automaker now and there
really aren't the holes there used to be to run your own wires
through. One of the main reasons they went this way was to reduce
engine noise in the passenger compartment.

If you have bucks burning holes in your pockets, buy the overly complex/automated 87A. You obviously can afford to throw money out. Oh yes, you can probably also afford to send it back to ETO for repairs!
If you want value for your money and the 3CX800A7 (excellent) tubes, and you must have the name, go for the 89.
If you want to be smart, find either a used TITAN (TenTec) amp or even a Commander amp. They all use the EIMAC tubes and have excellent power supplies.
Good luck!

All equipment listed below was purchased New by me within the last 8 months. I have listed the price I paid and I am asking seventy-five cents on the dollar. You pay shipping & handling. The reason I'm selling is that I am starting a New expensive hobby and the boss says I can't have two expensive hobbies at the same time!

1). Icom 2710 with both optional modules installed.
UT-66 Voice synthesizer Cost $66.00
UT-84 Tone squelch Unit Cost $88.00
Expaned trans/receive mod done.
Paid - $854.00 Asking - $640.00

2). CSI CS900 Simplex Interconnect (Autopatch)
Paid - $360.00 Asking - $270.00

3). Diamond S/W power Power meter SX-400
Paid - $130.00 Asking - $97.50

4). Philips Antenna Rotor & Controller with Thrust bearing.
Paid - $90.00 Asking - $67.50

5). 4 way 25 pin A,B,C,D switch. Cost new around $45.00, make offer!
Paid - $45.00 Asking - $33.75

6). RF Concepts 2-meter Max-Amp-45 45/150
Paid - $290.00 Asking - $217.50

7). RF Concepts .70 centimeter 4-310-45 30/100
Paid - $340.00 Asking - $255.00

8). Two Icom Z1A's. All mods except 800 rec mod done, (Have transistors and intructions for 800 mod).
SOLD Paid - $355.00 ea. Asking - $266.25 ea.

9). Two Mirage BD35 144/440 amps.
Paid - $180.00 ea. Asking - $135.00 ea.

10). Astron Power Supply with meter RS35M
Paid - $170.00 Asking - $127.50

11). Astron Power Supply RS20A
Paid - $100.00 Asking - $75.50

12). Pyrimid 8amp Power supply.
Paid - $46.00 Asking - $34.50

13). Maxrad mobile 144/440 mag mount antenna.
Paid - $70.00 Asking - $49.00

14). Crushcraft AR270B 144/440 omni directional base antenna
Paid - $100.00 Asking - $75.00

15). Crushcraft A270-10S 144/440 beam antenna.
Paid - $80.00 Asking - $60.00

16). Three Diamond 144/440 duplexers
Paid - $55.00 ea. Asking - $41.25

17). (PURCHASED USED) Kenwood 4100A (Have Manual)
Asking - $200.00

18). Lightning suppressor
Paid - $40.00 Asking - $30.00

4939. Info Wanted on Motorla Micor

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-16 00:00:00 UTC
From: jminer@qed.net
Message-ID: <E2HCwJ.25H@nonexistent.com>
Source record: 188523

Hello,

I recently recive a Micor Radio from a friend. It appear to be a Repeater and 70 Watt Radio in one unit. I would like to use the 70Watt radio on packet and maybe get the repeter to work. The repeter seem to have a built in controler and Duplexers. I am missing the control head and do not have any kind of manule for it. Can someone give me info on where to get a control head and how to modify it to the 2m Amateur band. Any any other information on the Radio would be a great Help.

Here is some info that I have:
Motorola Micro | FM Two Way Radio
FCC Xmit Data: CC3161
Model No.: X83RTA3407BA
Serial No.: SG3690

Matthew,
Im using a GAP Titan . Its been up since May this year. Real sucess story with it. Usuable on all bands 80 to 6 meters. Heard some HAM even got to use it on 106 m, don't hold your breath on that one. But I keep trying. Just take it out of the box, follow direction put it up and operate. Yes if I had it to do over again I'd buy one in a minute.
Factory engineers are real helpful
GAP also has a internet site now

Another idea... I just finished a 3 x 3 x 6-ft hole. Cut through a 4-inch concrete deck slab to get at the dirt. Dug straight down with long-handled shovel. Tied rope to handle where it enters the shovel. Made it _MUCH_ easier to get the dirt out when the hole got deep. Enlisted XYL to handle the shovel; I did the pulling on the rope. Dunno who came out better!!

Good day one and all.......

David as for the backhoe, forget it......I've spent a number of years running one and unless you have one of the really small ones, you can't dig a hole 2.5 ft. in diameter and 6.5 ft. deep. It just can't happen and leave the surrounding ground undisturbed. Sorry.

Having spent some time in the world of construction, the way I see it you have 2 choices. 1. Gat a shovel and someone with a small kester that can dig and fit into a 2.5 ft. hole. Yes, I know it is not very likely but, it is a way. 2. Talk with the local electric company. They have a truck that is used to set electric poles which has an auger that can dig a round hole. Most of these trucks will dig somewhere between 18 and 30 in.. Some have differant sized augers to dig the needed dia. hole.

If you can talk them into digging the hole you may have to exchange diameter for depth. I'm sure there are some eng. type folks out there that can give you the numbers but, I would thing 18-20 in. dia. and 8-9 ft. deep would be a good exchange for the requested 2.5 ft. x 6.5 ft.. Remember, put some re-bar steel in the cement base to hold the thing together.

Hope this helps......and please I'm not trying to put anyone down on the backhoe deal.....It's just that the physics of the way they dig that won't let them do this paticular job.

73's and good luck with your tower.......

Bill N5WO

Why dig a hole 6.5 ft. deep? Unless the tower is really tall and self supporting, you would be better with a hole about 3'x3'x3'. Suggest you try to get hold of a copy of the Rohn or Heights tower manual. They give suggestions on how to design and make tower bases.

If the tower is guyed, you can get by with a much smaller base.

This was terribly annoying, as I use my radio for emergency communications when I'm out solo hiking, and I could foresee this thing getting switched-on accidentally in my pack... it doesn't take much pressure to switch it on, and the intended delay only exists on power-off.

I cut a small ring of rubber/plastic stuff from an old Casio watchband and glued it around the button. Again, not elegant, but functional.

4964. Knwd TS 940 PLL Unlock

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-17 00:00:00 UTC
From: Andy Vavra <avavra@erols.com>
Message-ID: <32B75DE3.66A3@erols.com>
Source record: 188348

Has anyone found an easy, non-instrument fix for PLL unlock on the TS 940? My rig gets "watery" sounding on receive when stone-cold and sometimes loses PLL lock where the VFO goes to all decimal points and receive goes dead.

The rig comes back to life when warmed-up and then behaves normally for the rest of the day.

Kenwood service bulletin says to recalibrate three transformer slugs on the PLL board for a fairly low (I believe 450 uV) at a TP9 on this board, but the fix requires an RF millivoltmeter which I don't have.

I have had limited success with scrubbing the flux residue off the board (I don't know why), cleaning the connectors, and retouching some somewhat cold appeaing solder joints on the PLL board, but the rig still sometimes gets that watery sound although far less frequently.

Any ideas for a non-instrument fix? What has worked for you?

de Andy, KD3RF

Also, I would like to know if anyone knows whether the FT-50R can be modded to do full-duplex crossband. How's about 220 MHz tx?

From: spain@ug.eds.com
Message-ID: <1996Dec17.185404@ug.eds.com>
Source record: 188353

I bought one of the new TM-V7As from HRO in Anaheim. I checked early on (I was sold by the ad on the back of QST) and was told that they did not have any in stock and the ones they had on back-order were already "spoken for" with signed checks.

I walked in the following Saturday and asked for one expecting to hear "January some time...". My bluff was called when they said "SURE!" and produced one in the box :-). I pulled out my checkbook and quickly purchased my new TM-V7A.

I know many of you will call me nuts but... I've mounted the unit on my PC800 motorcycle and I've got a small problem.

The remote display looks great (if you can steer clear of cars staring at my dash!). I've re-wired the MC-53DM microphone to allow the PTT and the DTMF keypad to be used while riding.

I have to reroute the microphone to my helmet. I've done this in the past using some 49MHZ radios. In short, the microphone does not work!

I removed the microphone from the MC-53DM circuit board and wired my helmet microphone directly to these two pins but no go. Is there something special about this microphone?

Any help would be greatly appreciated! I'll also answer any questions anyone might have on the TM-V7A in terms of setup etc. I think I've used all the features (I really like the visual scan!).

From: aa753@freenet.hamilton.on.ca
Message-ID: <597bc5$7p6@main.freenet.hamilton.on.ca>
Source record: 188355

I've never seen any mention of Icom's low-end HF transceiver, the
IC-707.
Has anyone on here used one? Or can someone provide a reference to a
review I might look up?
I checked Icom's Web site. There's no mention of the IF frequencies so
I assume it's double conversion (unlike the 728, 735, 736 etc. which use a
triple conversion scheme).
The Web site also doesn't indicate whether the narrow filters are an
easy plug-in proposition.
Comments?

4975. New IC-706 Control Program for Win95

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-17 00:00:00 UTC
From: "John A. Hansen" <hansen@ait.fredonia.edu>
Message-ID: <32B710ED.7BCA@ait.fredonia.edu>
Source record: 188359

A new Icom radio control program designed specifically for the 706
has been posted to the ARRL section of oak.oakland in the

pub/hamradio/arrl/bbs/programs

subdirectory.

The following is from the readme file:

The Icom 706 is a revolutionary radio that provides HF through 2
meter coverage in an extremely compact package suitable for mobile
operation. However, I found that when I used the radio at home, it
lacked many of the features that I had come to expect from an HF or VHF
transceiver. IC-706 was written to restore most of these features and
add a number of others. It includes fully computerized radio control
with the following major features.

1. Direct frequency entry.
2. Ability to skip directly to any memory in the radio.
3. Addition of an unlimited number of other memories identified by
name.
4. Automatic repeater offset.
5. Ability to tune repeater output frequencies and have the input
frequency track.
6. Ability to easily listen on the input.
7. Ability to monitor the transmit frequency when operating split on HF
(the equivalent of a Kenwood TF-SET button).
8. A wide range of tuning steps (including those most appropriate for
repeater work).
9. Rudimentary frequency tracking functions for working mode A and
mode K satellites.
10. Extremely close tracking between the tuning knob on the radio and
the display on the computer screen.
11. Automatic selection of any serial port from Com1 through Com8.

Enjoy,

John WA0PTV

4976. F.S. New Heathkit in the box

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-17 00:00:00 UTC
From: donh@cup.hp.com
Message-ID: <5978uh$irl@hpax.cup.hp.com>
Source record: 188360

I have the following for sale..............

Heathkit..Remote Coax Switch, model HD-1481

This is a kit, still in the box, complete! This kit has two units.
One that mounts outside the shack connecting up to 4 antennas.
One coax leads into the shack. Antenna selection is made through
the one coax along with the RF signal.

The switch handles up to 2000 watts PEP. I will be glad to answer
questions for anyone who may be interested.

I am asking $140.00 for the switch, you pay the shipping, about 6
pounds.

Regards Don WB6LPJ

>other tubes. How can I tell if the tubes are good? I can't find a tube
>base diagram, so not sure which pins are the filaments. I would like to
>sell them as pulls if they check okay.

Can't remember the basing by number, but it is an 8 pin base with a keyed center pin which is the control grid. Four equally spaced pins are connected to the cathode, and the heater is connected to two pins that are opposite each other. One of the remaining pins is the supressor grid; maybe the 8th pin isn't actually there. Note that there are 2 versions of the 4CX250: B has 6 V heater, and F has a 26 V heater.

For those who are not familar with this family:
4 = tetrode
C = ceramic insulated
X = air cooled
250 = plate dissapation

A bit of advice on using a backhoe to dig the hole for a tower. All tower mfgs strongly suggest you NOT use any back hoe type digging. Reason is you need to dig the hole straight down, pour concrete and let the concrete use the sides of the ground as part of its support. If you backhoe a 45 cubic foot hole you cannot "backfill the excess hole after the concrete form is poured. The backfill cannot support the lateral tension of the concrete.

I just did a 4x4x6 hole two weeks ago. I used a post hole digger making a 6 hole grid and then cleared the rest with a shovel. Think of gravedigging, I know I did.

David, This is a very uncommon size hole for a tower. Most guyed towers are set in this size hole, but not this deep. Most self supporting towers are set in much larger holes depending on the height. Most larger towers use 4 holes about this size, one for each leg. It would help if you state what type tower you are putting up and the antennas you plan to put on it.

I had to call a pier drilling truck (they also set poles for the utility company). They charge anywhere from $60 to $100 per hour from the time they leave their shop. They can dig a hole like this in 30 minutes in normal soil or a couple of hours of so in rock. It cost me $480 for 8 hours to dig my antenna holes in rock. There were four 18 inch x 5 1/2 ft and 1 30 inch x 4 1/2 foot plus a 9 inch x 9 foot trying to get through the rock for a ground rod, but it never came out the other side. Good Luck.

Mostly nostalgia value. In the 50s and 60s AM was the voice mode of choice on VHF, and alot of commercial and homebrew gear was built up. Some of that gear has become classic, like the "twoer", and some of the old hallicrafters gear, and so on. It's neat to be able to operate that mode with the boat-anchor VHFers.

4985. Any experience on Kenwood TS-570D and Yaesu FT-1000MP?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-17 00:00:00 UTC
From: Wendell - W5FL <w5fl@flash.net>
Message-ID: <01bbebc1$782c3840$d3c3b5cf@w5fl.flash.net>
Source record: 188403

I read the recent review in QST for the TS-570D and was very surprised because of all the bad press the TS-870 has received for its lack of crystal filters (and the resulting lack of selectivity in the presence of large signals). Since there is room for only one crystal filter in the TS-570 how have they taken care of this problem?

The FT-1000MP not only puts you in debt, but there are not enough birthdays, Christmas and other occasions to ever buy all the mechanical and crystal filters to fill it up.

I want the cw selectivity to work pileups and same for ssb. Is the TS-570 going to be as good as the FT-1000MP even though it costs about 70% as much (or the other way around costing 50% more).

Does anyone have any experience with these radios, good or bad?

You can rent a small (very small) backhoe or trencher and dig the
proper hole. Alternatively, see if you can catch someone in your area
that is having some septic, sewer, drive, or other excavation done and
offer the guy running the equipment some cash to dig your hole.

Message-ID: <32B68A9F.775A@compuserve.com>
Source record: 188412

My FT50R turns on the power at the slightest press of the power on/off
button and not after 1/5 sec. press as stated in the manual. I can
not find anything about changing this in the manual. Anyone got
a solution????

Johnny

I have an FT-10 that had a turn-off problem and had to send it to Yaesu for a firmware upgrade. Yaesu was aware of the problem when I called- when you turned the radio off in a particular sequence, the audio amp stayed on (you could hear a slight hiss). Tucker wasn't much help, but they didn't tell me they were going out of the radio business. It was probably old stock (early version) from Oklahoma Comm Center. I'm not complaining, though, because they sold out the ft-10 (w/16 keypad) for $189. It seemed like a very good price at the time, and Yaesu was speedy with the upgrade.

For Sale:

I have a Icom IC-736 for sale. I bought it in the end
of October 1996. This rig is as new, has maby 2 hrs use.

The IC-736 is a general coverage transceiver from 30 KC
to 30 MHz, Also has 6 meters. Has built-in Antenna Tunner
and 110 Power Supply. It is All-Mode, SSB, AM, FM, & CW.
I have shipping box, power cord, hand mic and book.

I paid $1700.00 for it but will sell for $1450.00

Thanks,
Boyd

THE COMPLETE RF TECHNICIAN'S HANDBOOK

(Published by Howard W. Sams, Inc.)

"The Complete RF Technician's Handbook" is THE book for the radio communication s beginner, student, or experienced technician, and supplies priceless information on not only wireless fundamentals, but also the advanced concepts vital to a successful career in RF communications.

Included are over 400 informative ILLUSTRATIONS and tables

The handbook includes everything a technician needs to know in real-world RF electronics -- from the fundamental concepts to the more advanced explanations of modern ANALOG and DIGITAL RADIO circuits and modulation methods. Furthermore, operational instructions on RF TEST EQUIPMENT, as well as identifying proper and improper signal waveforms, and AM, FM, PM, and SSB theory are included. In addition, transmitter and receiver testing methods and TROUBLESHOOTING TECHNIQUES are solidly covered.

I have a Robot 1200C for sale. It has the Martin EPROM and the memory modification. It comes with a PC interface card, software, and manual.. It is in MINT condition.

For those who are not fimiliar with this SSTV converter, It is a stand alone unit with a built-in frame grabber. It can be interfaced and operated from a PC but also can be operated independently. With the Martin EProm it works on all the current SSTV modes.

This originally cost over $1500 , I'm asking $400.

I can be reached at 520-284-6848 or at nu6x@sedona.net

> 10m SSB.
>
Allen,
do a search for "CB Radio". Look at Left Coast CB abd it's links.
You will find an abundance of info on PLL unlocks. If you know the PLL, I may be able to provide some info for you. Getting the fo's is the easy part....Broadbanding the receive and transmit capabilities requires some time, effort and substitutions. There are "tricks" such as adding more broad varactor diodes in the vco and ssb circuits, paralleling unused sections of IF transformers, changing the value of the synth crystals, etc. Some PLL's and circuit board combos are better than others, and the Cobra usually uses a Uniden board with either a 8719 or 8734 PLL IC.

The best authority is Lou Franklin of CB Cint International. You can contact him at info@cbcintl.com .
He has written variouis volumes of info covering whatever level of info you care to get into. He is also a ham and has been hombrewing and studying PLL circuits since their introduction to the retail market.

You will also have to consider adding FM (relatively easy) and repeater offsets. It is a good project, and even if it doesn't perform as well as a "store bought" rig, the experience that you will get has a value that no price can be set on.

Good Luck

A good back hoe operator can dig a straight hole. I've got a 5 x 5 x 8
tower footing in my back yard and it was dug in about an hour by an
experienced operator using a two-foot bucket.

Source record: 188286

Eric you have a single frequency, no PL, 45 watt Motorola micor
Here's how Motorola comes up with the model number:

T43RTN-1100B

4=45 watt transmitter .. 5= 60 watt .. 6= 90 watt 7= 110 watt
3=high band .. 1= low band .. 4= 450
R="R" receiver(Motorols model designator)
T="T" transmitter (Motorola model designator)
N= No power Supply or 12V radio

1=carrier squelch .. 3 would mean private line
1=do not know what this digit specifies
0=one frequency .. 9 would mean multiple frequency up to 4
0=do not know what this digit specifies

I hope that helps a little. Maybe some could add to my list of model
designator meanings from the BIG "M"

5020. Does anyone own a IC-W32A?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-18 00:00:00 UTC
From: "Richard F. Garcia" <n2czf@magg.net>
Message-ID: <01bbed13$a5d54680$6c70dacd@default>
Source record: 188290

I have posted a few messages in the past week requesting any mods for the IC-W32A and got no
replies. I have one and thought they were popular, I have had little time to play with it but did manage to
find one MOD that does work on my own. How do you like your W32A and are there any problems that you have found ? The only thing that bothers me is the way the bands are set up and in some configurations you cannot get a freq. range, but in others you can, it can be confusing! I also find the audio to be poor as compared to my TH-78A (rest it's soul!) but I guess I can learn how to accept it.

Has anyone confirmed that this radio will do 800 MHz RX ?? I was told that it would by some ham at a local store but did not ask very much about it since I was not planing to buy the radio. He also wanted $$$ to do the mod himself and would not give it out.

I'd like to use Motorola Pageboy 2 voice pager as a remote-control receiver
for a system that I am working on. Anyone have a schematic of the beast
or any idea on how to disable the beeping that signals an incoming page
and where to find a COR output?

Thanks very much for your help.
/mike

5022. Low noise amplifier-250MHz

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-18 00:00:00 UTC
From: jstocker@colpitts.ece.uiuc.edu
Message-ID: <599gqm$s2l@vixen.cso.uiuc.edu>
Source record: 188292

I am hoping someone might have information I where i
could purchase a low noise amplifier.

I am looking for something with roughly these specs:

operating freq: 250 MHz
bandwidth: just about anything would work..it is for a
narrow band application
Gain: hoping for 15-20 dB
Noise Figure: hoping for around 1dB
package: Ideally chip or surface mount form

Low power application and supply voltage and current
are flexible.

Any ideas??

Thanks
Jeff Stocker

I have, out in Missouri, under my brother's care, the following set of
items, to be bid on in clumps or in toto, but not individually as he is
doing me this favor:

GEAR LIST STARTS

LIST:
1 - Heathkit Model #SB-600
1 - Heathkit Model #SB-101 the great transceiver that got me 150 DX QSLs
1 - Heathkit Model #HM-15 Reflected Power Meter
1 - Heathkit Model #HD-15 Hybrid Phone Patch
1 - Antenna Rotor motor & CDE control
1 - 6 arm antenna
1 - Microphone w/ button
1 - Microphone bulb w/o stand
1 - Gal RF load resistor
1 - Code Key
1 - 6 position coaxial switch
1 - Antenna rotor control model #T10 Alliance Mfg Co
1 - pair headphones by Sensiphone/Superex
1 -1 Home made cigarbox RF something w/transformer
3-4 loose vacuum tubes some are 4" & 5" tall
25+' RG59/U Coaxial cable
25+' RG58/U Coaxial cable
35+' RG8/U Coaxial cable
35+' RG8/U Coaxial cable
Misc short coaxial cables w/connectors
Other misc coils, switches & misc tube #6LQ6 USA.

1 - 1000 watt amplifier 22w x 15d x 28.5h, w/plate converter meter,
load
& plate adj. knobs, w/blower meter & switches. This unit is
very
heavy & has 6 large vacuum tubes: The top section contains 4 tubes
labeled RCA Electron Tubes #60-04. These are all connected at their
tops
as well as plugged in at their bottoms. There is 1 unused replacement
for
these labeled CETRON 5725/T160L, it is 2" dia x 6" high. The lower
section contains 2 tubes, 2-1/4" dia x 8" high. One is marked
JAN-CQN-872A, VT 42A, Made in USA, SLATER. The other is marked 872A,
USA
2-43, RCA Radiotron Electron Tube. Both have mercury spatters on the
inside of the glass.

5026. Re: Kenwood TM V7A dual band (I got one)

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-18 00:00:00 UTC
From: tnic <tnic@styx.ios.com>
Message-ID: <599j4n$l0k@nnrp1.farm.idt.net>
Source record: 188296

It is true the TM-V7A does not have the MUTE feature the 733 (and
virtually all dual band radios) have.

This is a shame. You can work almost all the features on the radio from
the mike. Unfortunatly you have to work the volume knobs on the face of
the display by reaching over.

I called Kenwood about this at 310-639-5300 They said its been raised with
Japan - Kenwood what ever that means.

You can express your joy to Kenwood via email at cuyeda@ix.netcom.com

Being a 733 owner it appeared they adressed all the improvements that the
733 needed (faster scan, alpha names, larger characters on the display,
better display, memory already uses indicator, built in ctss decoder,
easier to use menu system and much more). But they screwed up on the MUTE.

If they fix the mute this radio will be the best mobil rig I have used or
looked at (in my opinion and I have not seen them all).

Kenwood said if mute is added I could have it added to mine. So this is
some software control feature.

On the mike the letter C controls the mute feature on the 733. Letter C is
unassigned on the V7A

Hi and thanks for reading.

I have been so swamped with projects lately and haven't had time to use the things I've bought plus over the past couple of years in my dealings of both buying equipment for myself, and buying others out, I've amassed a collection of things which I'd like to try to now clear out.

Among them are:

2 HTX 202 H.T.s in good working condition

Several older style Computer Printer Ribbons all in original packing
Lot's of NEC 3500 type and C. Itoh 8500.

Several Older Electronics Reference Books

Tek 422 Scope (needs Repair) 15 MHz Dual Band. For Parts or can be repaired.

Repair Manual for the Tek 422 (Sold Separately)

Kantronics Challenger Terminal Unit (Receives/Transmits AMTOR, ASCII, RTTY, CW (5-99WPM ?) with manual AND the associated Tandy Color Computer II AS A PACKAGE DEAL and in working condition. Needs only a Power Adapter and Monitor to use. (a cheap 5" TV works fine) and a Transceiver.
This deal is a STEAL if wanting to break into RTTY or other modes. PACKET IS "NOT" A MODE OF THIS TERMINAL

Some Cabinets for housing new or older projects

Some Electronics parts, new and pulls from older equipment.

Sams Photofacts for Antique TVs for you collectors.

A FEW photocopies of older Amateur Radio Receiver Service Data

A few Older style Electronics Equipment Owners/Operators Manuals

Mic Cables for 2 way radios (use to wire your own or make interconnects)

VOMs

Freq Counter

Signal Generators

Older Style Service Monitor (Lampkin 107C)

Misc. Radio Transmitters/Transceivers

CBs (maybe used for 10M (?))

CB Power Suppplies (can be used for low power H.T.s or mobile radios)

Much too much to list. All going reasonable or close to it.

Interested in any or all? E-Mail with your wants or needs to:

Tech@DP.NET

** All sales are final, and must be paid via U.S.P.S. Money Order. Shipping costs are the responsibility of the Buyer. Any equipment sold, will be insured and sent best way.

5032. Realistic WX alert radio mods??

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-18 00:00:00 UTC
From: petrocjw@ucunix.san.uc.edu
Message-ID: <petrocjw-1812961553150001@192.168.1.2>
Source record: 188302
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Just wondering if anyone has a good idea on how to mod a Realistic WX alert radio model 12-140. It seems to use one crystal as a reference for the 3 WX service frequencies. I would like to know if I could drop a crystal in there to reference something in the 147.00MHz range so I could tune it to rx 147.060 and others in the area. I am also curious what the tones are that actually set off the alarm. I would like to set it to go off if someone does a long-tone zero on our repeater. If I knew what the tones were that set it off, I could program our repeater controler to emit those tones after a LTZ.

Anyone ever try this? Does this make sense. Please reply via email and posting if at all possible.

Thanks,
JWP

I need a copy of the service manual for the IC02-AT 2 meter hand held. I have already checked w7fg vintage manuals on the web and they don't have that particular one. I have called Icom too and they can't sell me one because it is out of print. They can fix the radio though, for $75/hr, plus parts! I would like to try and fix it myself, but would prefer to get a manual first. I will pay for reproduction and other minor expenses. Please email me at JLOlivares@aol.com.

Source record: 188306

My Icom 02-AT 2 meter handheld transceiver has failed for no apparent reason. It will not receive or transmit. Attempting to transmit at either power setting causes the display to flash, and it is not the batteries. Connecting the output to a power meter shows that it delivers power briefly, but then shuts down. I also seems to be receiving some kind of signals as it is tuned, but they aren't voice. It is possibly receiving out of band. Does any body have experience with a problem like this or with repairing this model of radio? Please email to JLOlivares@aol.com. Thank you.

From: francist@corexco.com
Message-ID: <32b872ab.0@news.total.net>
Source record: 188308

Hi!

I'm currently using a VHF satellite network (Orbcomm) in remote monitoring application. My main problem is the size of the antenna which make it too visible to vandalism and thieft. The antenna I currently use is about 45 inch long and has 4 32 inch long radials. I'm looking for a small/compact antenna that could be hidden easily. Here are some specs:

Frequency range: 138-150 Mhz
Transmitter power: 5 watts
The gain can be unity or more
For some reason, in my application, the antenna need a ground plane (work ok without it anywhere else!!). I might be able to find a way to make it work without it so a built in ground plane is not important.

If anybody knows a manufacturer who has that kind of antenna, or a place where i could find some information about antennas, please E-mail me!

Thanks

Hi Guys,

I am posting this on behalf of a friend:

I have problem with Alpha 77 D amp - if I drive it with more than 25-30 watts, grid current goes high. Managed to tune KW+ one time, but after a few minutes grid current started gg up/down. So, I can't tune it properly for full output.It has been stored for a long period. The tube is OK. Anybody had similar problem?

Anybody has any bright ideas.

Please reply directly to me,

Thanx

>
> Larry W9MDX

Sure...No problem...

Txy...the T means transistorized radio or power supply (first used on the
T Power T51 etc series radios....Transistor switching supplies with TUBES
in the rigs...G series strips)
X=9 is a 330 watt base station (also called quarter kilowatt)...
y=2 is 72-88 Mhz midband special
5 is 800-900 Mhz

I have a complete listing of Motorola and GE combo numbers and their
meanings...will try to post them soon

Ron,

The ic707 is a very basic radio. However, it was created for the ham
who doesn't want anything fancy. A very good friend has one and it is
exactly what he wanted. No bells, no whisle's, but it performs very
well. I don't have the spec's but it put out a solid 100 w, good
receiver sensitivity, good tx audio, fair adjacent freq. rejection, no
menu's and VERY easy to operate. Truely an appliance operator' dream.
It fills a need for the 'hands-off" operator. Would be a nice 1st radio
for someone, as this one was. So far (1 1/2 years) no down time at all.

Rick, W7AV

5048. WTB: Grid Dip Meter

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-18 00:00:00 UTC
From: Richard Hager <rhager@millcomm.com>
Message-ID: <32B8A088.3456@millcomm.com>
Source record: 188318

Hello all,

I'm looking for a Grid Dip Meter, preferably solid-state, but will consider others. The last one that Heath made before they went away looked like a nice unit.

Cash or trade is OK with me.

Also looking for a bargain on a wide range RF gen like an HP8640B, or Boonton 102, 103, etc..

Let me know what you have and what you want.

Will also trade CNC control software. Check out the web page.

Thanks!

Richard

The correct group to post equipment to in order to reach the amateur radio,
scanner, short-wave and related audiences is rec.radio.swap.
I see about 50 postings a day there.
There are other news groups for computer equipment, ect.

According to the FAQ for this news group this group is for discussions about amateur radio equipment and for
sale postings should go else where.

People interested in seeing for sale postings should subscribe to rec.radio.swap.
That is where I look for test equipment, as well as typical amateur radio equipment.

Hello Drake Lovers.

I WORK ON DRAKE TWINS, R4 THRU R4C, T4 X THRU T4XC

Just to let ya-all (I live in Virginia) know that I am again planning my winter repear season now. I am a semi-retired radio tech (FCC commercial licensed for those of you that didnt ask) and my rates are competitive. ALL WORK GUARANTEED as long as radio is operated according to factory specs.
I also work on linear amps. Typical Drake twin alignment is $100.
Also I buy Drake parts units.

5052. TH-79ad UHF off frequency?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-18 00:00:00 UTC
From: Jeff Goebel <jgoebel@rrnet.com>
Message-ID: <01bbec81$68a990a0$5bb70bce@jeff>
Source record: 188361

I have a Kenwood TH-79ad which is about 9months old. Recently, people have been complaining that I have noisy/cliped audio when transmitting on the UHF side. Checking with a frequency counter it is about 5khz higher than the displayed frequency. The VHF side is right on frequency.

Can anyone advise me if I can adjust this myself with just the aid of a frequency counter?

I wanted to avoid sending it in for repair if possible.

Thanks,

Jeff Goebel

Hello, out there in radioworld. I'm buying a second han receiver these days, and I'm wondering if anybody knew enough about receivers to say which receiver is better: Drake R8A, JRC NRD-535 or ICOM R71A. I'm only going to use it for SSB-listening (aircraft), but these signals are indeed distant enough...
The price counts in as well, of coarse: Second hands: Drake around 900USD, JRC around 1200USD and ICOMs at 700USD.
Hope someone can help me out....
Until then: Merry christmas!!

Tore

>KG2BX

Hello David;
I know noone wants to hear the old macho story about how
an induvidual completes an unbeleivable feat , but it was worth
the exercise and $$$ saved when I dug the base of my tower...
My tower is 80 ft , guyed, and the base is a 3 ft base section of
Rohn 25 sitting on 24 " of gravel (big chunks). My tower has
taken 2 direct strikes (I think that's all) and I could not ask for
a better ground as the rest of the shack remains unharmed. I dug
the hole with a post hole digger . Created a hole about 36" in DIA
and about 5 feet deep - so the top of the 36" section is flush with
the surface of the ground . Sitting on the gravel and who knows
how many miles of GA clay , the base is plenty sturdy after backfill.
Speaking of which : after you backfill you need to let the ground set
backup with frequent wattering.
I also had a guywire break once and the tower still hardly budged
I Have a 4 element Quad on a 30 foot boom up there .
Consider what ur putting up there first . and always listen to all the
great advice from those " who have been there - done that "

I am interested in an ongoing discussion of ATV. The forum can range from down converters and transmitters to antennas and repeaters. We are currently working on a ATV repeater in South Central New York State. A discussion on the topic will hopefully not only be of value to us. but also encourage enthusiasm in this area of ATV.

If you want a serious grid dipper look for a Measurements Model 80. I
have seen them at fests for $75 or so. These are so sensitive that you
can hold the head at the current loop of a half wave and get a huge dip-
where others fail to show anything.

When I was a kid the electric companies did not have truck-mounted augers and dug all of the holes for telephone and power poles by hand. I have watched them do many and remember well the tools they used. One long-handled spade was used (intermittantly with a very long crow-bar) to loosen the dirt (usually hard clay with imbedded rocks). Another long handled shovel had much of the blade formed to a ninety-degree angle so as to provide a means for lifting the loosened dirt out of the hole. As I recall the holes were at least six foot deep or considerably deeper. Two men would easily dig two or three holes per shift.

For a single hole I would expect you could make do with some jerry-rigged equivalents of the tools I described above. The technique is the thing. Loosen a few inches of the packed earth and then lift it out of the hole. And then just keep at it until you have reached your goal.

Gene, you might try Tucker Electronics in Dallas. They are out of the ham business now, but previously they were an ICOM repair station and had a pretty complete set of manuals. Also try AVVID in Oak Cliff. Cliff Holland bought out Tucker's repair business and may also have manuals.

5080. HF Rig Questions

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-19 00:00:00 UTC
From: jzimm@zephyrbbs.com
Message-ID: <59daua$3d0@lois.zippo.com>
Source record: 188193

I want to return to HF after an absence of a few years. Am considering the purchase of a new rig with about $1400 as the max to spend. My questions are:

The Yaesu FT-840 ($800) and the Icom IC-728 ($1200) are similar in features. Is the Icom really worth the additional cost? Another rig that is of interest is the Icom IC-738 ($1380). Does anyone have any expeience with this one? Why does the IC-736 include a built in power supply and the IC-738 not?

Along these lines, if anyone would like to 'preach' about their favorite rig, please do so. Reading specs and catalogs is one thing - hearing about actual experiences is much more helpful!

Thanks!

I recently bought an old Heathkit Cheyenne (model MT-1) tube transmitter for hams, and I plan on restoring it. It's missing the mobile power supply, however. I need a power supply that runs off 12 volts input and puts out 300 volts at 50 milliamps AND 600 volts at 110 milliamps for the 6146 final amp tube. Must have either a 6 pin Jones plug or be connectable to a 6 pin Jones plug (I can get the plug locally if I have to) for output, and probably should have pos/neg alligator clips (or be connectable to them) so it can be hooked directly to a car battery. Mail moo@midtown.net.

5086. ICOM IC-211 Memory Backup

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-19 00:00:00 UTC
From: gregl@iglou.com
Message-ID: <32bbb623.5850914@news.iglou.com>
Source record: 188237

I recently purchased an ICOM IC-211 2-meter all-mode transceiver and had it completely aligned by ICOM so it is working very well and is a nice companion to my ICOM IC-701 HF rig (the two are virtual twins). The only problem I've run into so far is trying to get the memory backup working properly. According to the manual, the four-pin plug on the rear panel has a jumper between Pin 1 (13.8VDC input) and Pin 2 (13.8VDC output) since I'm using its internal power supply. The manual also states that I can use a 6 to 12VDC power source connected between Pin 3 (6-12VDC input) and Pin 4 (Ground) so the rig will maintain the current frequency when it is turned off. However, when I connect a 9V battery as shown in the manual, the rig is powered on -- even when the power switch is off and AC power is removed.

I know this can't be correct because a friend has an IC-211 with a 9V battery connected in the same manner and his rig operates correctly. When he pushes the power switch, the rig turns off; when turned on again, it restores the previous frequency. I have compared our two rigs and can't find any obvious differences, but neither of have schematics. Any ideas?

ICOM IC-211 2-meter all mode, probably made in the mid '80s or
thereabouts. It has FM, USB, LSB and CW and is a virtual twin of the
ICOM IC-701 HF rig.

Dave,

The IC-740 is Amateur band Only and will not extend beyond the Amateur bands.
The modification you see is the WARC modification that clears the transmit
muting on the 18 and 24 Mhz bands as they were not legal at the introduction of
the IC-740 transceiver for sale in the U.S.

Good greif, There have been NO Changes to the IC-706 since it was introduced in October 1995. Yes the IC-706 still has all the modes it was introduced with including 2 meter AM.

Looks like ICOMs advertising dept over looked the 2 meter AM mode in the description of the radio.

It's easy. Turn the power off on the radio. Hold down BAND, SQUELCH, and POWER for 5 seconds.
The receiver on the left side now has additional bands. It now covers 108 thru 999 MHz EXCEPT
for cellular and 200-300. The mod will not erase any memories that you've already programmed. Kudos
to ICOM for making it so easy!

If anybody has discovered how to enable the transmitter (only for use on the bench as a signal
generator!), I'd like to hear about it.

INCREDIBLE! He wants to CHARGE you!?! Here's what to do! Hold down
BAND, SQUELCH, and POWER for 5 seconds. The left receiver will now have
additional bands covering 108-999 MHz EXCEPT for cellular and 200-300.
Kudos to ICOM for making it so easy!!!

BTW, I've checked the receiver sensitivity at various frequencies
on a service monitor. It's <.5uV.

Thanks Gary. The ads in January QST seemed to imply no more "AM" mode on
2 meters. Thanks for setting me straight.Also, all the people who told
me about the ICOM 706A version and Icom 708 have seemed to dissappear
from the face of the earth?Perhaps ICOM put "ELIMINATED THEM"!
The Yaesu Rep at the BOXBORO MASSACHUSETTS ARRL convention did go on
the record saying that Yaesu will have a copy of the Icom 706 but with
440 mhz included (35 watts output all modes on 2 and 440 mhz). Available
in the Spring of 1997!

I haven't opened up this version of the radio, but I converted several of the weather cubes that RS used to sell. All that was required on them was changing the resistance of the reostat on the tuning circuit, I don't remember the exact values, but they used a variactor which had enough range to get down to the 2 meter band.

I don't know if it's of any use to you but Waters and Stanton over
here in the UK sell a Mizuho pocket HF SSB and CW 2 Watt transceiver
for ï¿½279.95 , although my catalogue is six months old, I don't think
the price will have changed much. They do sell by mail order, but if I
was you I would have a look round in the States as amateur equipment
generally tends to be a lot more expensive over here!

There are 3 models of radio

MX-3.5S (3.525-3.550 MHz)
MX-7S (7.075-7.100 MHz)
MX-14S (14.200-14.250MHz)

A range of accessories are also available, and frequency coverage is
determined by a variable crystal oscillator and the rig received a
favourable review in Practical Wireless a couple of years ago.

If you want to contact Waters and Stanton for more information, their
address is:-
Waters and Stanton electronics,
22,Main Road,
Hockley,
Essex.
SS5 4QS
England.

their phone number is
+ (44) for the UK
01702 206835
Their Fax number is

+(44) 01702 205843

I hope that is of some use to you Ira, best wishes for Christmas and the new year.

Hello freinds,

I bougth a Yaesu FT-50 some days ago, and i am very happy with it.

But after some testing, I found out that the antenna is not very good,
(low TX).

I tryed a Motorola antenna on it, ad it vas MUTCH better, but the
connector vas not the same.

Do anybody know about an antenna that works better, and fits the FT-50
??. I only use the 2M band.

Thanks

While you have that receiver open, can you give us any details of what's inside? Years ago, I had a Radio Shack weather receiver, and it amounted to a FM BCB receiver, moved to the weather channel. It was varactor tuned, and went to a 10.7MHz if. The filtering there was only IF transformers, no ceramic filters.

I had assumed that the weather receivers of today were a fancier design. But I bought some scrap hand held CB sets recently for parts, and their built in weather receivers had a single conversion design, and the crystal does not translate to any standard IF frequency. I need to do some more calculating to figure out what's going on.

Is there a second conversion in that weather receiver? You should be able to uncover that information by looking for a second crystal elsewhere on the circuit board.

Are there any ceramic filters? If the circuit fits the usual pattern, there'd be one at 10.7MHz (maybe marked with that number), which might look like a ceramic capacitor except it has three leads. Then maybe there'd be another filter, in a square plastic package maybe, most likely running at 455KHz. I have no idea whether this presumption is valid, but if it's a good quality receiver, then it probably would be double conversion 10.7MHz/455KHz and most likely at this date uses an IC for the IF strip, if not for the whole receiver.

This information would be useful to others. If the circuit is double conversion and uses ceramic filters, then they are well worth converting to 2M use, and would provide a cheap means of getting a 2M monitoring receiver, which many seem to desire.

If it's a much simpler circuit, it still might be useful in some cases, but less so and not something that I'd spend much money on.

> 87 FB 62 DA 9F 94 24 77

I mounted a TM-732 (same basic radio) in my '94 Grand Cherokee by taking out the ashtray and making a flat plate the same size as the control head, plus about 1/4" in height. Drilled two holes in the plate above the control head and used small sheet metal screws to go into the plastic lip above where the ashtray closed.

Put the radio and duplexer on a sheet of 1/4" plywood about 12" square and put the whole thing under the drivers seat..The remote cable from the head can be stuffed under the left side of the console, and the power cable from the radio does the same. Mic connector got screwed to the side of the console by the drivers seat.

Radio power was obtained from the fuse block (I know..I Know..you're supposed to go to the battery directly, but it works fine and has for 2+ years). I went on the cig lighter fuse since its 15a and not used by me. Grounded to the frame at the fuse block.

Antenna cable was run along the left side of the vehicle to the tail gate and out it. I use a mag mount antenna at the left rear of the roof and the cable runs thru the gasket on the tail gate. Hasn't leaked yet!! Just don't run the cable at right angles to the gasket, kind of

run it parallel to the gasket and let it slowly transition from outside to inside over about 12-18" while decending along the left side of the tailgate.

I put a remote speaker up under the dash on the drivers side. I just cable-tied it to the wire harness there and let it hang..I'ts out of sight and you can hear it fine..I used a Motorola land mobile speaker with the mounting bracket lashed to the wire harness.

Good luck...Doesn't take more than a couple of hours to do it this way and it comes out with no evidence of every being there..

Cole, AA7RD

5121. DX-70T vs IC-706

Hello everyone,

My name is Vic and I am looking for some information. Being new to HF I know very little ... about the whole scene. Looking at rigs however, I have decided I'd like to buy either an Alinco DX-70T or an Icom IC-706.
Does anyone have an actual comparison of the two rigs side by side so as to comment on performance? How about features on HF & 6M between the two? I know the DX-70T comes with CW & SSB narrow filters built in and they are an option on the Icom, but how about actual performance between the two?
I have seen MANY mods for the IC-706 but NONE for the DX-70T. Are there mods available for the DX-70T?
I have heard the 706 sounds lousy on HF with a stock mic. A friend said he talked with a DX-70 owner and it sounded like the "big rigs"! Is this true?
How about this ... ya know the typical finger indent on the tuning knob? Well, the 706 has it and I've tried it. Very comfortable, works well. The DX-70 doesn't have it! How is it to tune??? I don't have anywhere to local to try one. In fact in SE Florida here, don't know of a single person with a DX-70. Don't see them for sale either!

Awaiting your comments (and tips to mods)!

The FT-50R can not do full duplex because there is only a single
transceiver circuit in the radio. For FD you need to have two transceiver
circuits. The best that the FT-50 can do is half-duplex cross band by
setting separate xmit and rcv frequencies.

I've got a Tenma PS and the fan is AC, and it's not in a box (open
blades).
This fan is EXTREMELY quiet (never know it's on!).

You can get fans like the 3 inch square DC from:
Mouser at http://www.mouser.com
Digi-Key at http://www.digikey.com
or probably a couple other places, too, but these guys usually don't
have
minimum orders (always a bonus).
Enjoy,
Phil

Dear friends,

My AEA DSP 2232 doesn't work right.
I'm getting on the LCD of the TNC the following,
Packet
Packet
and both lights DCD and CMD are on.

On the screen of the computer appears the following message when i communicate with the TNC,

cmd: 3d: DSP failed load software and sometimes cmd: 2d: DSP failed load software.

I dont know if the Microchip Motorola 56001zl20 is doing wrong or some statics on it or other.
How can I solve this problem..
AEA they say is in processof closing, so they can not help me.
Please some one do it.
Awaiting your kind comments, have my best.

Greetings all,

I have a Tektronics 465 scope for sale. It's a dual trace, 100 MHZ portable version. The calibration expired in (I believe) April of 1994. I purchased this `scope used from my place of employment thinking I would explore the building side of the hobby. I've since decided that I have the time to either build or operate. Hence the reason for this post. Also, I do not have probes to go with this unit. I'm asking $350 plus shipping.

Primary reason (aside from lack of use) is that I want to shop for a DSP, and need the funds tied up in this piece of test equipment to offset the next purchase.

I can be reached at 716-654-2733 `till 4:30 EST, or 716-392-3183 eves.

>Why dig a hole 6.5 ft. deep? Unless the tower is really tall and self
>supporting, you would be better with a hole about 3'x3'x3'. Suggest you
>try to get hold of a copy of the Rohn or Heights tower manual. They
>give suggestions on how to design and make tower bases.
>
>If the tower is guyed, you can get by with a much smaller base.

The size of the base needed depends very much on local soil mechanics.
The tower base serves two purposes. It bears the weight of the tower,
and any loading that guys may impose. And it serves to resist the
overturning moment of the tower. Different soils can support different
ground pressures, and different soils have different resistances to
shear. There is no "one size fits all" for this sort of thing, but
in general deeper is better than wider.

Now my tower has almost a full section buried. In other words the
hole is 10 feet deep and has 2 feet of aggregate in the bottom. I
dug it by hand with a posthole digger. Not with an auger, with a
real posthole digger. I started the hole with the regular handles,
and changed to longer handles as the hole got deeper. It took two
leisurely mornings to finish (too hot to dig in the afternoon).

For a 6.5 foot hole, the standard handles will suffice. You just
have to get down and reach into the hole a bit to work them when
you get down near the bottom, the standard handles are about 5.5
feet long. It will help if you replace one of the wooden handles
with 1 inch galvanized water pipe, however, because the extra weight
makes the posthole digger dig better. Even in the hardpan clay here,
I can just drop the digger in the hole to get a bite, close the blades
with the handles, and lift out the dirt. That's a lot easier than

having to muscle the blades into the ground.

If you've never seen a real posthole digger, it is like two tile spades facing each other, joined with a pivot near the bottom. You drop it in the hole, spread the handles, which brings the spades together trapping dirt between them, and lift it out of the hole. Repeat as necessary until you are done.

Situation:
Moving to Greenland and just getting my License

Wanted:
ICOM-W32A or Yaesu FT-51RH

Question:

I've read the reports, got the specs and am going to buy in a 10 days
time. What would I be best off with ?

I'm looking for reports on everyday use since I will need this HH as
safety and as a "toy" for my newfound and growing hobby. I want it to
be my rig for the next couple of years until I get a higher license
and I want it to be the best choice !!! :-)

Please email me with your impressions and reports and please please do
it sometime before 24-12-96 as I will not be in touch with
civilisation the next 4 months or so.

Merry Christmas and Happy newyear to all

Hi Les,

Some monitors are worse than others and the greater the sweep frequency used the greater the problem. The last monitor I bought was an NEC 5FGp. NEC included two sets of split ferrite cores and tie-wraps. They are placed on the video cable, one set at each end. I have noticed no serious problem with electrical noise. You could probably find sinmilar cores at a computer store or use low-frequency types for RF.

5157. Re: Help me! Which is better FT50 or FT51?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-20 00:00:00 UTC
From: wsoon@primenet.com
Message-ID: <32bb4835.1938477@news.primenet.com>
Source record: 188153

The FT51 has a standard BNC connector for the antenna. I remember
hearing that the FT50 has a strange connector. I have an FT51, and
hook it up to all kinds of antennas, all of which have BNC connectors
on the coax or the end of the rubber duck.

I also have a Kenwood 220 HT which has a non-standard connector
which means I am stuck using the rubber duck that came with it
until I can find some adapter to allow me to connect to a BNC or other
standard connector.

That is one thing I like about my FT51 besides what others have
already mentioned.

Gee, Gary, you just blew your image. We all thought you were Hi Tek.

'Real hams do it on the giga hertz at 56k baud, and real hams dig tower holes with a post hole digger'. I don't know, something just doesn't seem to fit.

Personally I think post hole diggers are an obsolete, antiquated way to dig a hole that should be banned. Why should today's modern digital hams be forced to have a post hole digger jambed down their throat just because they want to have a tower ? No commercial outfit uses post hole diggers anymore. They all have gas powered augers, and big trucks with giant drill bits. Why should hams be subject to using silly, outdated, antiquated tools for digging holes when nobody else is using them ? To suggest a ham dig a tower hole with a post hole digger is nothing but HAZING ! Just because YOU like having blisters on YOUR hands doesn't mean ALL of us have to like it. How about people with disabilities ? Do you expect disabled people to spend two days in the yard with a post hole digger just because YOU did it ? What about people who live in places where the dirt is REALLY HARD ? Should they be kept out of ham radio just because of your silly post hole digger hazing ritual ?

I think not. I think people should be able to just pick up the phone, call one of those guys with the big trucks with the giant drill bits, and let THEM come over and dig the hole for the tower. Post hole diggers are keeping a lot of quality, qualified people out of ham radio, and it's time this hazing ritual come to an END !!! I am going to write to the ARRL and WARC 99 and tell them I think it's about time to get rid of post hole diggers for ever !!!

>
> Do anybody know about an antenna that works better, and fits the FT-50
> ??. I only use the 2M band.

I bought the adapter to a standard BNC, and used a Maldol FR30 (dual band).
To deal with the cosmetics of the adapter, I used a black heat-shrink wrap
(twice) and shimmied it down close to the base to help keep out dust/water.
Looks good and works GREAT! The Maldol AH 209s looks fantastic and works
almost as good as the stock, but is a fantastic very-small dual band
antennae. Including adapter, 4", without adapter, 3".

5173. WTB: Old SB-xxx chassis for homebrew project

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-20 00:00:00 UTC
From: gekko95@ix.netcom.com
Message-ID: <59d07e$1br@sjx-ixn6.ix.netcom.com>
Source record: 188201
Cross-posted to: rec.radio.swap,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Hi! I just bought an old SB-102 chassis with all of the parts removed for $15 to use as a homebrew project chassis. I plan to repaint, and cover the faceplace with a new thin sheet of aluminum for my new rig to live in. (2 stage, 30 watt all band CW rig with built-in VFO)

Well, I need another and possibly 2 more - one for a matching receiver I'm planning, and another for a small amplifier.

So I am looking for ANY SB-xxx chassis, completely stripped of parts or not - don't care what the model was - even could maybe use smaller boxes, like old SB-610 scopes or speaker boxes, or whatever. Again, I am after the boxes and the innards are not important (although if any parts still remain, they would be put away for future homebrew)

Cheap is kind of important, though. That's why I am specifying no parts and looks are unimportant, as long as no dents or cutouts that would be tough to paint over. $10 to $20 is the range I was thinking.

email to Dave gekko95@ix.netcom.com

Thanks to anyone who replies!

(PS - I now have 2, and the transmitter is coming along. Gathering parts for the receiver. Now if I can find another SB-xxx box for the 811 amp, and maybe a speaker box, or other similar SB-xxx.... 73's

Source record: 188215

JUST saw in the Icom Japan Web Page that Icom is coming out with a new MARINE/AMATUER HF RIG. It is called the IC-710.It supposedly costs 1/2 the price of similar radios of its class. It puts out 150 watts on HF and is all mode. 350 hz CW RITTY filter included. There are two versions. Version one is MARINE BAND transmit only. Version two is BOTH MARINE/AMATUER transmit FCC OK. Both radios have general coverage receive.NO Price yet.

5188. Plans for 70cm duplexer?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-20 00:00:00 UTC
From: Jeff Gregor <hobbes99@ziplink.net>
Message-ID: <32BA9AD8.38B6@ziplink.net>
Source record: 188216
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.antenna

I am trying to find blueprints for the construction of a 70cm duplexer. The ARRL Antenna book has a great set of directions for a 2M duplexer, but I have not been able to find the 70cm equivilant. A co-worker of mine owns his own machine shop, so I can get one made fairly cheaply (better than paying $500+ for a commercially made one, anyway). If anyone can suggest (or even supply) construction directions for this I would certainly appreciate it! Email replies would be preferred but I will try and check back in the newsgroups in a couple of days.

Thanks!

Source record: 188218

Hi Bill--

I'm guessing this is a KP1/6M mobile preamp. Sounds like something may have happened to the T/R switching circuit so the bypass relay isn't kicking in the pre-amp anymore. Have you contacted the factory? This unit should be covered by a 1-year full warrantee. If it is still under, Mirage would be obligated to either replace or repair it at no charge. Even if it is no longer covered, they MAY be able to fix it for a reasonable price. Too bad to throw it away if the problem isn't major.

I agree with the GAP antennas. I used a Challenger for several years with great results. I did have a minor problem with it. I guyed it a bit high, and the local winds did their thing and bent the antenna below the guy points. Sent some bucks to Texas Towers for replacement tubing and it's working like a champ again.

Hi all,

My nephew has been trying to learn enough electronics and code for over a year to get his license - without any luck. Seems he's one of the few people who has trouble with the theory, rather than the code. He just can't seem to grasp it the principals of electronics...

Was wondering if anyone has had any experience with the video training courses for an amateur radio license offered by the ARRL?

I would like to purchase the courses from someone who has used them and wants to re-coup some of their investment. I would like to get him (both) the tech and general license courses - in good condition of course.

Any help/information is appreciated. E-mail please.

John

>
> Has anyone here had any experiences with these, especially with
> possible modifications and TX/RX range? Any comparisons possible?

Hi ...

I had the unique experience of having a friend who
owned both radios. While out camping one weekend, I was
able to set them side-by-side and compare them.

90% or more of my operation is on HF Pactor. We
motorhome camp ... we camp a lot. I use HF to get into the
home BBS and keep up with things.

There was no question that the Icom was the better
of the two radios. On top of that, with the 2 meters, there is
potential of all kinds of satellite fun. But, you pay a BIG buck
for the extra features. So much so that I'm not sure a DX70<>IC-706
comparison isn't an apple-orange comparison.

For messing around, the DX70 would be great. For
more serious applications, get the 706. I did.

or...

Sign on to ftp.funet.fi with a userid of anonymous and
use your e-mail address as the password. Move to the
/pub/ham/hf-log directory and get xmlog125.zip

Version 1.25 has many minor improvements - the big
changes are DXCC/WAS/WAZ award submission tracking and
support for the Radio Amateur Callbook (Flying Horse) CD.

If your PC only has 4mb of memory, Version 1.23 is still
available at my home page or at BARC's home page (version
1.25 requires 8mb).

The archives can be busy at times, don't give up if you
can't sign on right away. Let me know if you:
- Want more info
- Can't fetch the file
- Want a diskette instead

Have fun...

For Sale--
2 Kenwood Model TW-4000A Dual Band Mobile Radios.
2 meter and 70 CM (440mhz)
Both Work 100%

High Power--
2 meter 25w
70cm 25w

Low Power 2 meter 5w
70cm 5w

VHF 144.0--148.0
UHF 440.0--450.0

Both have--
MC-48 Touch Tone/Up-Down Mike
TU-4C Tone Board
Mobile Bracket
Minor Scratches
10 Memory Channels

One has VS-1 Voice Synthesizer Unit

Both radios are in daily use now.

$275. For unit without VS-1
$295. For unit with VS-1

Jim, -
I have use low temperature skidoo grease in several rotators that I have got back on the road to working. At +90 or -40 they work well, & this grease does not harden & get tacky like a lot of other lubs.(We have both hi & low temp. here in Canada.
Hope this helps.

I am looking for a couple lengths of B&W 3012 coil stock for
a receiver project. I know I could wind my own, but there are
4 interlinked coils in the project and I doubt I'd have a very
easy go of trying to get them all on the money.

It's 3/4" in diameter, 32 tpi. I know there must be some old stock
lying around out there somewhere.

If you have any you can part with for a price fair to all, email me
at:

Dave gekko95@ix.netcom.com

Many thanks in advance to any who reply.

Dave

Do what everyone else who gets an amateur radio license today does:

Buy a Gorden West study guide and just memorize the questions and
answers.

Its quick. Its easy. And most of all, nobody knows the difference.

Why waste time and effort learning all that useless theory and
electronics when all you want to do is yack on the radio. Memorize
a question pool near you today.

I had to purchase a new ant out of neccessity. I came home and my dog pulled the radio off of the windoe sill and ate it. He only damaged the outside and the ant. The antenna seemed to be in good shape but it looked pretty bad so I tried to find a good replacement. I tested the Comet "shorty" (about 2") I think it was the SMA 503. It didn't access my local repeater as well as the stock did so it went back to the dealer. I found an antenna that affords the best of both worlds, it has a short base (1 1/2") and a wire that extends about 6 inches further. This wire is very flexible and it makes for a very good looking radio. The model is the Diamond SRH519. I use a 1/8" piece of 5/16" rubber tubing puschase fron the auto parts store as a spacer and to keep with the MILSPEC rating of the radio. Good Luck!

> Gary
Gary,
Its about time you said something about the am mode. I guess today
the new hams don't read the manual or push the button to see if the
radio funtion's. Lots of AM activity out their the old timers use it to
get away from the shack on the belt people. Oh yes Gary you may want to
coment about this I was told that if you are in SSB mode go to menu Q4
and change carrier freq. up or down it will change your transmitt audio.
The best setting is -190, I check with another Ham about this and we
tested it and it worked. The setting would change with the persons
voice.

Well, fellows, I just hooked up my Timewave DSP599zx. I can only say that it is, in a word, UNBELIEVABLE. I love 80 meter cw. But the noise is often just awful as you know.

Last nite, on a unusually noisy night, I tweaked the filter up...CF 600 and BW of 150...kicked in the random noise filter...and then tuned slowly up the band. The ONLY thing I could hear was quiet until I tuned across a station, which POPPED out of the quite and it was the only thing I could hear. I was just amazed.

The SSB filters are good too, and unless you really squeeze the signal, do an adequate job of cutting down on the band noise along with atmospherics.

I'm no expert, but I really like what I hear. I agree with the reviewer in QST last month...a SUPERB station accessory.

You should be able to simply scale those plans, IE reducing every
dimension by 3 would yield a set of 432 MHz duplexers. To reach
440 MHz, you'd reduce everything by slightly more than 3.

> Cap slot visible through hole...

If your 02AT's problem not due to a mistuned VCO(usually the result of previous weaking and failure to reseal the slug again with wax) then I would hazard a bet that it's the synthesizser's reference crystal gone west. It's the wire leaded rock that is attached to two pins of the PLL IC(right next to the VCO). Usre a 10 MHz or better Oscope and look at one of the two leads, you should see a very heathy sine wave(>2 v). Also try this: ID the crystal, then hit it with a SMALL amount of "freeze" spray. If this magicaly brings the radio back to life, that's your answer. Repalce the rock, because after it warms back up it will instantly die again. You can install the new rock by cliping back the leads from the old rock, flush with it's case. This leaves you with enough lead to solder to the new rock, eliminating the need to remove the radio's PC board. You will also need to use a freq counter to look at the radio's TX freq. Adjust the trim capacitor on one side of the ref crystal, so as the radio operates on the correct frequency. Remember to leave the radio set on Low power if you test TX with the back cover off, as this is the heat sink for the PA module(the thing covered in white goop). Good luck 73s DE WA1YKL

5241. Rotator Grease?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-21 00:00:00 UTC
From: kb7et@pipeline.com
Message-ID: <59fuo7$l9@camel5.mindspring.com>
Source record: 188170

I need some advice . . .
I'm rebuilding a very old rotator and want to clean and repack the bearings. Is white lithium grease the proper one to use? Where does one find the proper grease?
I've read that axle grease should not be used.
The lowest temperature in the winter here is mid 20's.
Any other advice?
Thanks in advance for any advice and Seasons Greetings.
73 de Jim, KB7ET

Comet makes a sma antenna called the sma 501
, it is about 1.3-1.5 inches long, diameter of
approx. .3 inches. It receives reasonably well
on UHF ham and out of band very well 450-520MHz.

On VHF, the FT50 seem to be OK, but not the best,
for close in repeaters within < 1.5mile it seems
OK to ?, but for a real stealth antenna on your
HT, most folks think you are carrying a celluar
phone. This antenna works well in the 800-999Mhz
band.

The best SMA antenna for the radio to date, but not
as tiny as the Comet SMA 501, is the Comet SMA 3 ,
it works great in band as well as out of band on VHF
and UHF.

The Yaesu FT-50 has a hot(very sensitive receiver)
and when you put the broadband(low VSWR SMA-3)

on the FT-50, strong signals out of band can cause intermod/crossmod products. But for the most part it not to bad when signal levels are to to strong nearby.

I have both the SMA 501 for stealth low profile applications were I will carry the FT-50 in public and not draw a lot of attention that its an HT.

I was at a car wash, waiting for my cash to be washed, and had the SMA-501 on my FT-50. A six year saw my FT-50, and remarked , oh, a celluar phone, I took off the SMA501 , and put the SMA3 on , and he said, ITS A WALKIE TALKIE!.
Anyway , that's the mentality test for the public, test it on a six year old!!, and most of the public respond in the same manner.

Most of the stock anteena's on these VHF/UHF are made to perform only good in the ham band, so that out of band signal don't crunch(overload the radio front end.

I listen alot out of band so changing to the Comet SMA3 was about the best ANTENNA for VHF and UHF, its about ~ 1 to 1.5inches longer than the stock Yaesu antenna that comes with the FT-50.
It seems to radiate alot better, getting into repeaters than any other comparable antenna's of the same size.

If you are trying to get maximum range on VHF, then I suggest the Diamond RH77CA, its fully flexable and twice as long than the stock antenna, but its a BNC mount. You will need an adapter BNC to SMA.

I would not recommend putting an Adapter BNC to SMA, with any of the Rigid BNC type antenna. Virbration, Mechanical Shock will dampen out easily and you could easily fatigue the metal at the base of the SMA mount in the casted housing of the FT-50. To replace the SMA mount on the radio looks like a real pain. DON'T USE RIGID ANTENNA's or YOU WILL BE SORRY!!!

I real like the Combination of having both the Comet SMA 501 (Stealth Like) and the SMA 3 for high performance (VHF/UHF/ & out of band Listening).

The Comet SMA 3 is real winner on the FT-50 in terms of super performance!!!!

I hope this helps you out

73
Mike

5244. RAPID CASH

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-21 00:00:00 UTC
From: Free Money <money@money.com>
Message-ID: <32BBAEF8.7CF4@money.com>
Source record: 188173

This is the fairest, most honest way I have seen to share in the wealth of the world.!

Take five minutes to read this and it WILL change your life. If you want to know how to make thousands of dollars quickly, legally, and with NO CATCH, then keep reading.

The Internet has grown tremendously. It doubles in size every 4 months. Think about it. You see those 'Make Money Fast' posts more and more. That's ... because it WORKS ! So I thought, all those new users might make it work. And I decided to try it out, a few months ago. Besides, what's $5.00, I spend more than that in the morning on my way to work on coffee and cigs for the day. So I sent in my money and posted. Everyone was calling it a scam, but there are SO many new users from AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began receiving bucks in the mail! I couldn't believe it! Not just a little, I mean big bucks! At first only a few hundred dollars, then a week later, a couple of thousand, then BOOM. By the end of the fourth week, I had received nearly $47,000.00. It came from all over the world. And every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still had enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking a similar chance with $5 of my own bucks. Not a big chance, I admit--but one with incredible potential, because $5 is all anyone ever invests in this system. Period. That's all Markus, Dave, or Dan invested, yet their $5 netted them tens of thousands of dollars each, in a safe, legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.
Invest your $5 by writing your name and address on five separate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill inside each paper, and mail them by standard U. S. Mail to the following five addresses:

1. Michael Barratt - 27 Park Ave. - Poughkeepsie, NY 12603

2. Brian Truter - 101 N. Park Avenue - Springfield, IL 62702

3. J. Campbell - 1040 C Winners Circle - Bowling Green, KY 42104

4. Joost Walter - P.O. Box 259 - 2870-AG Schoonhoven The Netherlands

5. S. Thomas - P.O. Box 4945 - Tampa, FL 33677-4945

STEP 2.
Now remove the top name from the list, and move the other names up. This way, #5 becomes #4 and so on. Put your name in as the fifth one on the list.

STEP 3.
Post the article to at least 250 newsgroups. There are at least 19000 newsgroups at any given moment in time. Try posting to as many newsgroups as you can. Remember the more groups you post to, the more people will see your article and send you cash!

STEP 4.
You are now in business for yourself, and should start seeing returns within 7 to 14 days! Remember, the Internet is new and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses. Yes, that's right, only 5. You make $5.00 in cash, not checks or money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250 additional postings with your name at #4, 1000 postings. On average then, 50 people will send you $1.00 with your name at #4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your name at #3 or 10,000 postings. Average return, 500 people= $500.

They make 250 postings each with your name at #2= 100,000 postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at #1 and you get a return of $60,000 before your name drops off the list. And that's only if everyone down the line makes only 250 postings each! Your total income for this one cycle is $55,000.

>From time to time when you see your name is no longer on the list, you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through and repost this article everywhere you can think of. The more postings you make, the more cash ends up in your mailbox. It's too easy and too cheap to pass up!!!

So that's it. Pretty simple sounding stuff, huh? But believe me, it works. There are millions of people surfing the net every day, all day, all over the world. And 100,000 new people get on the net every day. You know that, you've seen the stories in the paper. So, my friend, read and follow the simple instructions and play fair. That's the key, and that's all there is to it. Print this out right now so you can refer back to

this article easily. Try to keep an eye on all the postings you made to make sure everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real, then don't do it. But please print this article and pass it along to someone you know who really needs the bucks, and see what happens.

REMEMBER....HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS! GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the bucks to the people already included, you will not get much. I know someone who did this and only got about $150 (and that's after two months). Then he sent the 5 bills, people added him to their lists, and in 4-5 weeks he had over $10,000!

Christian,

I own two of the AEA DSP2232s, and have done some internal tinkering
with both, so I may be of assistance.
First, what were the circumstances of the failure, were you running
something, or did you just wake up and fine the 2232 "locked up"?

Second, I would assume that you have attempted a "hard" reset of the
units? This is done by holding in on the rear panel mounted reset switch
when powering up, continue to hold until the front display panel shows
Reset.

Third, what software are you using to communicate with the 2232? A
terminal program or AEA PKRATT. There have been several times that one

of my 2232s locked up and I could only get it going again after I started the unit using a terminal program like Procom Plus, PKRATT just did not work sometimes.

Also be certain to have all radio cables disconnected when doing the reset. Be certain the unit is not getting any audio, this always works for me.

I am not 100% certain that AEA is totally closed yet. Last time I checked thier fax was still in operation. Perhaps a quick fax with a note may bring some additional suggestions. If you need the fax number, or don't have access to a fax let me know, I would be happy to glad AEA on your behalf.

Hope these suggestions help, let me know how you make out.

Larry,

I have an old SWan 6oo that does not have any CW filter on it. It does have a very excellent audio filter but certainly nothing like you describe for the DSP filter.

Do you think that filter would be usable on my old swan. It is so old that I am unable to find a cw filter for it.

Your description of the signal popping out makes me ask the question of the possibility of a threshold below which the DSP unit does not even hear the signals causing you to maybe miss the weak DX stations. Is that a possibility?

Dick:
It is getting to be an older rig but I think it should be worth about
$400. You should be able to add an additional $100 to $150 if it has the
internal AC power supply (PS-35 it think). Hope this helps.

Dear friends,

My AEA DSP 2232 doesn't work right.
I'm getting on the little screen of the TNC the following,
Packet
Packet
and both lights DCD and CMD are on.

On the screen of the computer appears the following message when I
communicate with the TNC,

cmd: 3d: DSP software load failed and sometimes
cmd: 2e: DSP software load failed.

I dont know if the Microchip Motorola 56001zl20 is doing wrong or some
statics on it or other.
I can communicate and change modems, etc without any problem.
How can I solve this problem..
AEA they say is in process of closing, so they can not help me.
Please some one do it. If you have service maunal check the error
messages and answer me.
Awaiting your kind comments, have my best.

>>

Worthless?? I just bought the 10 meter version. It is sitting on my
desk right now doing nothing except receiving some people with
sporatic-E, but give it a few years. This worthless toy will be
working the world...even with 2 watts, which is more than enough.
Now would be the time to buy these kinds of toys, especially for 10
meters! The band is dead, so the equipment is cheap. Buy them now, or
else you will pay even more when 10 opens back up!
Merry Christmas, everybody!

Check out the Diamond SRH519 and be pleasantly surprised. It's about he
same length as the stock antenna, but thin and flexible, like a cat's
whisker, so it doesn't stick you when you clip the radio to your belt.
I did not have the equip. to test it myself, but I am told by someone
who did that it works better than stock. Good Luck!

Why sell it? The 10M band is doing fine; it just takes a little
patience. If you are interested, I'll send you mod information to
improve your modulation, tie the XIT to your RIT control, and raise the
power output to 40W. I've got one, and it's a great little rig I've been
DXing on for a while.

Another option would be the Nickel-Metal Hydride batteries (such as
the ones sold by Maha - their MH-FNB41 is the same exact size as the
Yaesu version, but is 900 mAh versus 600 mAh, lighter, and does not
develop a "memory" like NiCads do.

Hello everyone,

My name is Vic and I am looking for some information. Being new to HF I know very little ... about the whole scene. Looking at rigs however, I have decided I'd like to buy either an Alinco DX-70T or an Icom IC-706.
Does anyone have an actual comparison of the two rigs side by side so as to comment on performance? How about features on HF & 6M between the two? I know the DX-70T comes with CW & SSB narrow filters built in and they are an option on the Icom, but how about actual performance between the two?
I have seen MANY mods for the IC-706 but NONE for the DX-70T. Are there mods available for the DX-70T?
I have heard the 706 sounds lousy on HF with a stock mic. A friend said he talked with a DX-70 owner and it sounded like the "big rigs"! Is this true?
How about this ... ya know the typical finger indent on the tuning knob? Well, the 706 has it and I've tried it. Very comfortable, works well. The DX-70 doesn't have it! How is it to tune??? I don't have anywhere to local to try one. In fact in SE Florida here, don't know of a single person with a DX-70. Don't see them for sale either!

Which is the better HF rig? Awaiting your comments (and tips to mods)!

I would seriously consider the ICOM IC-706. I don't care for the Alinco products. A friend who repairs sand-state microprocessor-based radios for a living won't touch Alinco radios.

Pay a bit more - but get what you pay for!

I have one and I love it. As another ham said when I described it as
cute, " it's not cute,... it's precious "
It has a very sensitive receiver, and is a fine pocket scanner. I added
the Comet SMA501 mini dual band antenna, and use it with a dual band
mobile rig in the crossband repeat mode, and can get into any system I
need to.
It would be nice if it had a DTMF pad to control my IC-2410H remotely,
but then it wouldn't be so small and 'precious'.

I really like it!

Cross-posted to: rec.radio.swap,rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I am looking for a couple lengths of B&W 3012 coil stock for
a receiver project. I know I could wind my own, but there are
4 interlinked coils in the project and I doubt I'd have a very
easy go of trying to get them all on the money.

It's 3/4" in diameter, 32 tpi. I know there must be some old stock
lying around out there somewhere.

If you have any you can part with for a price fair to all, email me
at:

Dave gekko95@ix.netcom.com

Many thanks in advance to any who reply.

Dave

> of this for FM chit-chat

Very nice radio and I am very satisfied with it for usability as far as chit chat goes.

, packet,

I will let you know as Santa will be bringing a multi-mode TNC. It does do 9600 and it was rated hihgly in the QST dual band test and review article.

scanner,

As a scanner, it leaves alot to be desired. I have a 2006/456 with ScanStar so I am a bit spoiled in that respect. Only 50 channels per band and no real way to isolate one band from the other in order to sequencialy scan bands\freqs. Imaging is very apparent throuhgout the VHF\UHF bands (except the HAM bands). Cellular capability is not needed as calls are heard with ease in the 1100mhz area due to imaging.

working MIR/satellites.

There too I will let you know as I get all of the needed equipment at hand.

>I intend to use it as a base station.

I use mine as a BASE station and a mobile rig. It is smaller than the pictures lead you to expect. Nice radio and easy to operate. My second favorite HAM purchase next to the Yaesu FT50R.

Happy Holidays and enjoy.

Ah, I get to disagree with you, here, Michael.

Can't speak to the HF rig, but I've had pretty good luck with the two VHF/UHF Alinco rigs I've owned over the last 3-4 years. The DR-1200 I have has been in continuous tcpip packet operation, 24-hours a day for almost 4 years, through thunderstorms and such, with only dial backlight failure (a common problem with the 1200. I will admit), which I just fixed with $1.49 worth of bulbs (2) from Radio Shack. And their DR-570T dual-bander has been in my 1988 Acura Integra for almost as long, with nary a problem. I had to open both rigs to either expand reception , or fix the dial backlights (or both), and they are neither better nor worse than anything else I've seen. Their tech support seems reponsive enough, and from what I've read up on the newsgroups, their HF mobile has gotten rave reviews (except for its noise blanker--oh well). It is a LOT less expensive than the ICOM, I might add, and there are deals out there on the early version that are pretty tasty.

I'd like to hear specifics from your Alinco-unfriendly service buddy before I'd shun their equipment.

Do you ever get on 75 meters?

Happy Holidays.

5286. Needed: 8-conductor microphone cord. Kenwood - No Help

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-22 00:00:00 UTC
From: aor <aor@gteais.com>
Message-ID: <32BDAA33.3DD5@gteais.com>
Source record: 188063

Help. The Kenwood repair center says that I need to buy a whole new microphone because they do not sell the parts for it. As crazy as it sounds, the stock mic is considered an accessory, for which are sold in whole units only. I have an open wire in the 8-conductor mic cord.

My rig is the TM-241A 45 watt 2 meter mobile with the touch tone mic.

The total cost for a bad wire in this mic is $132.00 by the time I would be finished going thru an authorized Kenwood repair center. There has to be a better way. I would hate to see what the cost would be if something really needed rapair...

What ever happened to the good Kenwood repair name and services? I was unable to get a mic cord... Shame on them.

Any thoughts for a close replacement from the group here???

Thanks, and 73,

Al, NW2M

I contracted with a "tree planter" (look in the Yellow Pages) who advertised digging holes with a Bobcat. I asked the largest auger they had, which was 36" !!!! $100 bucks later I had a perfect hole 36" across and 6-1/2 feet deep. My tower is a TriEx crankup to 51', and has been up 4 years now.

73, and good luck.

I've had a '706 since November 95, and I love it. Yes, the noise
blanker leaves a lot to be desired, but I've not seen any other
blankers in rigs this price range that were any better.. I run my
706 mobile in a Geo Metro, without a lot of room for anything bigger.
I am on all bands but 75 with a Comet CA-HV anteena.

There is 1 "mod"... Hold down the "F" button (above PTT) when depressing
the light switch... Light will stay on until the unit is powered off, or
the Light button is pressed again.

Later,
Dave

Hi, Rick
a friend send me this msg..
but if you have a model th22-E (europe) you need to cut only
one wire, W202 (green wire).
Ciao Fabio

Hi,
I have mod for Kenwood TH-22, I already try it out by myself
and it work, I have Th22AT also. The mod ia as below :-

XTENDED TX/RX 136-174 MHZ
---

1. Disconnect the batt and ant.
2. Remove 2 long screws from the rear case.
3. Remove the control knobs from top of radio.
4. Remove the rubber top panel.
5. Separate the front + back 1/2. (Squeze the bottom front panel)
6. Locate and remove the Diode D-208 (Located of front panel circuit board)
7. Install the diode into location D-212
(Diodes D-210, D-211 + D-212 face the same direction)
8. Reassemble radio.

Rgds,

Hi, Tim N7XAU here, I have an Alinco DX70T, I bought it about 3 months
ago and have had great signal reports with it on 20 meters and 6 meters.
If your not interested in 2 mtr all mode then the Alinco is alot
cheaper. I havent had any problems with the radio, I have used it at
special event stations, mobile, and as a base. It doesnt have a built
in keyer, but its easy to use, its front end is hotter than the Icom,
and the recieve audio is better to. Thats my two cents worth.

5303. arrl tapes, blackbox for wefax, icom control software

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-22 00:00:00 UTC
From: burkebp@juno.COM
Message-ID: <19961222.105317.3630.0.burkebp@juno.com>
Source record: 188080

for John about ARRL videotapes: the arrl technician videotapes are rapid-fire and leave a glazed look on the faces of the uninitiated. Instead, get the question pool and go through and highlight the correct answers ONLY (never even look at the wrong answers!!!). Then review the questions and the RIGHT answers only. Remember - never look at a wrong answer. Then during the "exam," the right answer will jump out at you. Personal opinion: If the FCC and ARRL wanted you to learn theory, they shouldn't have given in to the freedom of information requests. This situation was created by cheaters to obtain info they shouldn't have right to. Imagine state run universities having to publish question pools of their exams? Maybe a med school?

for Robert Cone about black box for wefax: try the JBI Interface featured in the Dec 73 mag. It doesn't cost $129 like most manufacturers products, and is adaptable for many radios that are computer controllable. Number is 1-800-524-8658.

for Bob about Icom control software: LOGEQF works well, is DOS based, and a shareware copy is included with the JBI Interface above.
73,
Brian, N0iMD

5304. IC-706

I also just bought a new 706, am using it on bass. I bought mainly for it's size and the 6 & 2 mtrs. Have not made any contacts on 6 mtrss yet, but the 2 mtr works just fine for me. Although it is not as good a seperate 2 mtr rig. I find the Hf to be very operable and it does take up very little room, even with the AT-180 antenna tuner under it. Do not care for the modular mike plug though, I would rather it have the old eight pin. Have not used it mobile yet, but plan to this summer. It is a very compact rig and it does perform better then it looks.

From: psmeaton@globalnet.co.uk
Message-ID: <59h37r$6ea@kew.globalnet.co.uk>
Source record: 188112

Hello!

Thanks for reading this. I'm trying to get some information about the connections on the ACC-1 connector on the rear of the rig. I seem to remember, years ago, that if a particular pin was shorted to earth, then the display could be made to read a VHF frequency to be used when switched to the 10m band and using a transvertor. The rig is capable of displaying 50, 70, 144, 225 and 432 etc but I cannot for the life of me remember which pins does which band!
I am mainly interested in the 432 display as I am currently building a transvertor for this band.
I also seem to recall that there are a number of technical bulletins with handy tips and modifcations for the FT980, but I have never seen any nor do I know where to get a copy of any. Any ideas?

Any help would be greatly appreciated.

Please e-mail me if you can help:

psmeaton@globalnet.co.uk

Thanks!

I just wanted to wish everyone a very Merry Christmas. I have posted
a number of articles recently looking for homebrew parts, and the
responses have been a downright pleasure to read. It's nice to know that
the spirit of Ham Radio, contrary to the opinions so often found
in some of these groups, is VERY much alive and well.

After 12 years out of the hobby, I am DELIGHTED to be back in, and I have
alot of you folks to thank.

MERRY CHRISTMAS, AND HAPPY NEW YEAR.

A VERY merry 73's

Dave WB7AWK

From: Wave@mindspring.com
Message-ID: <59i36q$in4@camel5.mindspring.com>
Source record: 188118

I have two high quality direct analog synthesis synthesizers for sale. These are Programmed Test Sources PTS160. They cover .06 to 159,999,999 in steps of 1Hz. They have the built in TCXO or can be referenced to an external source of 5 or 10 MHz. Power is AGCed and can be varied from about 0 to 16 dBm. Switching time is between 5 and 20 microseconds depending on the frequency. All the units have the rack mount and GPIB and parallel interface allowing them to be fully computer controlled. Spurious outputs are down -75dBc(discrete), -35dBc(Harmonics). Phase noise is -63dBc(.5 Hz to 15KHz),-105dBc (100Hz), -115 dBc(1KHz). Power is within 0.5 dB flatness between .1 and 160 MHz. Price is $550 shipped. Current price on identical units is around $7000. These units are surplus from used NMR imaging equipment and are in great shape. For more information please e-mail me. Thanks

Pieter Ibelings

Very neat little radio John, BUT be aware that it only runs 1/4 watt. I just recently sold one because of this problem. If you near repeaters then it will work just fine. I live about 20 miles out of the nearest large city. The 1/4 watt was very noisy into the local machines. Also power drops to 100 miliwatts as the batteries get weaker.

Also lack of DTMF dialing can be a real problem. If you access autopatches, you will have to either get a DTMF tone generator or use a different radio.

Audio is not very loud. About the same as using a speaker/mic.

The physical size is great! Decent display. Very sensitive on all frequencies, including 800 Mhz. Easy to program. Uses an SMA connector for the antenna, so an adapter is needed to hook up outside antenna's.

If you can tolerate the low power and no dtmf dialing, its actually a neat little radio.

I am attempting to program a Motorola Spectra 450-480 model with Ham frequencies. It will accept freqs down to 445MHz, but nothing lower. Is there a way to "trick" the software into letting freqs down to 440MHz be programmed. With My GE S-825 control head, all I do is press ctrl-e instead of enter to program an invalid (Ham) freq. Will the spectra do something like this, too? I am using RSS version R05.03.00 5-APR-92

Please e-mail response. 73 de KD6KML (Josh)

Try Log-Eqf.... Logging, DXCC etc...Forget if the rig stuff
is in the shareware, but <$40. Ads in QST (EQF Software). Fills freq and
mode into log from Icom. Folows Icom tunning Memory pages... Freq and
mode to radio from keyboard. Packet cluster window. contest mode...auto
time/date logging.
Try the shareware to see if you like the log screen. ARRL Web and
others.
..Current V 8.07 is DOS and I run it in Win 3.1 as a "pif" window on the
shack-486/33 with 8 megs...Can do other stuff in Windows while
Log is in background. The memory pages are nice as the '735 only has
12 memories. They have a full line for freq, mode and a line of info.
Like the info space for what's in the memory - BBC etc.
Arrow down to a memory line, hit enter and the radio takes off.

GL, Bob

I have a Santec LS-202A VHF SSB/FM HT that I am trying to find a schematic for.
A service manual would be nice also, I would even settle for a owner's manual.

The unit receives properly, transmits properly, tx audio is good, rx signal is good,
rx audio is gone..... You can see the receive signal on the s-meter, and if you listen
very closely you can hear clear audio from the speaker, only very faint. I have bypassed
the speaker and replaced the audio IC, and now want to get some service info to go
further.

Any help appreciated, A current address for Santec or it's remains would also be a big
help. A copy of a manual and schematic would be a blessing.

Seasons greetings

>
> Thanks in advance.
>
Les,

By now, you have received quite a few suggestions, and now for my 2
cents worth.....

First, what is connected to the serial port? If you create a situation
in which the cpu and monitor are connected to ac via one outlet pair, and
the cpu is interfaced to an electronic device that is connected to ac at
another place in the location, the the potential for "ground loop" noise to
occur. The easiest way to
lower the odds for this happening is to avoid using pin one (1) -frame
ground of the 25 pin serial
connector ; the nine pin has only the signal ground, which is sufficient.
What may be happening is a difference in ground potential (small resistance
change between the ground wire resistance of the two outlets) allows the
signal to lag in phase, collide, and generally have a ball in the
background. I am not sure if this is the exact reference point, but when I
was faced with this in a large UNIX network that I had to support PCs for I
was told a difference in ground potential of 1 ohm in the first fifteen
feet of the ground wire on it's way back to the service entrance could not
only wreck date, but could destroy equipment.
When I was running my Oscar setup, I made a ground bar out of 1/2" hard
copper pipe which I ran the full length of the wall behind the equipment.
Then I used good high-density coax braid cut to length (and then a bit)
which I folded over the ends, tinned and drilled a hole the size of the
self-tapping screws that I used to attach to the pipe on one end, and sized
to fit the appropriate case screw that it was attached to the equipment
with. At the time, my wiring grounding was questionable (older aluminum
wiring), so I ran a large single conductor copper wire to the same rod my
tower was grounded to outside. (which may have been more conveinent than it
seems, as my tower was right outside the operating area.) My Oscar setup
included a computer and monitor, with a tracker/tuner board that ran data
to both the transceiver and rotor controller, which met the outside world
via coax and control cable. (And you never thought a computer had an
antennna).....To make a long, rambling story short, until I got all of this
together, S-9 and below were
"weak signals". I also use the practice mentioned in one of the previous
replies of ferrites on both ennds of the monitor cables, and I went a

little further than that to include ferrites on both ends of each power cord that was connected to anything going to the computer, circular ferrites that each rs-232 cable passed through via a one-loop wrap, same treatment to ribbon cables tying comm ports from the cup backplane or case to the motherboard or serial card. Also, don't overlook the keyboard; another candidate for ferrites. Radio shack carries a fair assortment of these guys, and I know Tandy's stock gains surged the day that I went shopping for mine....

I hope some of this will help to lessen your problem; keep us informed...

73,

David KD4NUE

I have had a try at both, and I like the 706 better. It is more expensive and harder to operate, but it does more, too. Although the DX70 comes with a cw filter, it is not very effective. The optional filters in the ICOM are pretty good (I have the 250 Hz in mine) although the rig does suffer some from "blowby", that is, signals leaking around the narrow filter. Neither rig has a very good noise blanker. The Alinco, I think, has the edge in strong signal handling capability, although I am judging this by ear as opposed to having the rigs on the bench. Alinco's break-in is also better. I like the fact that the ICOM has two meters, even if it is only ten watts. I already had a Mirage B3016 in the car, so now can run about 100 watts output on 160 thru 2.

The mods were unimportant to me as I don't see much value in opening up the transmitter for dc to light.

Hi Les,

In article <59d1db$eab@news3.texas.net>, From Lester Earnshaw
<lester@sedona.net>, the following was written:
> Has anyone any useful tips on how to prevent radiated noise from a
> computer monitor getting into the HF antennas. Switching the ac off
> to the monitor does not always stop it, but disconnecting the serial
> port does.

I hope someone answers, because I have similar problems.

My computer, with only the ac power line attached, generates more than
60 db of noise. I've made sure the case of the computer was fully
grounded and shielded (I even painted inside the plastic front cover
with conductive paint), I've pulled all the adapter boards while looking
for the noise.

I've tied the computer and ham equipment (and monitor, printer, etc) to
a common ground point, which, in turn, is connected to a set of 3, 8
foot ground rods.

All wires coming out of the computer box have ferrite suppressors on
them (even though disconnecting the wires at the box doesn't reduce the
interference).

I have the JPS ANC-4 noise reducer (which does a fantastic job -- just
not enough of a job for the level of noise I have).

I really must be missing something in the way of bypassing the computer
generated RF or shielding the RF -- but I sure can't figure out what.

I owned a DX-70 for about six months, earlier this year. I found it to be very easy to use, but very susceptible to front-end damage from other nearby transmitters. The Alinco people in Torrance were very helpful, and repaired the transceiver twice at no charge. In both cases, the VERY samll protective diodes in the front-end were shorted. The damage was caused by overloading from a 500 watt SSB antenna located about fifty feet from the DX-70 antenna; in both cases, the SSB RF was at a frequency substantially different that the DX-70 (8mHz SSB vs l4 mHz DX-70.) Obviously, a ham transceiver this "tender" would fare poorly in a "Field Day" environment. After the second repair, I took the DX-70 to Jun's Electronics, in Culver City, CA., and traded it in on a IC-706. I suffered a net loss of about $475 on the deal.

I think the design deficiency in the DX-70 is a a reflection on Alinco's lack of HF experience; the DX-70 was their first HF rig, all others being VHF-UHF types. The Alinco people in California could not have been more helpful or friendly. It's a shame that they go stuck with the DX-70. I hope that subsequent Alinco HF radios will be more rugged.

I have used the IC-706 in the identical environment that killed the DX-70, and have had no difficulty with it. It has some features that are lacking in the DX-70, but one would expect that from a radio that

costs $300-400 more. I like the built-in keyer, and the SWR meter is handy when I'm operating maritime mobile. I can use a simple antenna tuner eithout a tuning meter in it.

I'm a Merchant Marine radio officer, and I use the small HF rig to keep in touch with friends while I'm at sea.

Any questions, pls contact me at <w4pbc@digital.net>

As long as the box is protected by surge suppression on the AC line and landline/mmcp, there should be no problem. This assumes that the processor is adequately cooled. A fan will do that whether mounted on top of the processor or just drawing air out of the case but doing both is best.

You should also consider the MTBF of the components and warranty contract if any on the box. Sooner or later something is going to need replacing either for repair or upgrade. I don't know what your plan is for the box, but you'll probably upgrade before repair.

I have the Diamond and have found it to be a superb antenna. I was going to get the Comet, but my HRO rep said they were not nearly as good as the Diamond. To prove his point he pulled out his FT50 and he had a Diamond on it. As far as breaking it, I doubt it, my 11 mo old son got ahold of it and its still in one piece.I have bent it, dropped it etc. with no problems...

Hi Abe,

If the chip is getting proper heat dissipation, there should be no problem leaving it running. Although my PC is an older 486/33, I leave it on 24 hrs a day for at least four days at a stretch due to its application. Most of the chips made after mine include an integral fan, so they get more cooling than mine does (they also dissipate more heat).

The NWS WX receiver uses a 1050 Hz tone to activate. S-Com repeater controllers are easily set up to send this frequency tone. I have thought about doing the same conversion here in Paoli, IN. But so far have not had enough takers in the club.

Your drive will fial before the CPU, unless for some reason you are not
getting cooling. If I will use my PC gain within about 12-24 hours, I
just let it run.

Also, the thing doesn't heat up as much if there is almost no processing
going on, which is the case when the thing just sits there. The biggest
processing load is the screen saver.

hi... mitch here at vibroplex...

unfortunately, the prior owners of the vibroplex company did
not keep examples of bugs produced over the years for the
company collection... i am trying to remedy this situation
... so, if you have an old vibroplex bug (or know of one)
that you would like to see as part of the company's permanent
history, please email or call... i pretty much have good
examples of most post ww2 bugs (except those with tan bases)...
but i am very interested in knowing of any ww2 or prior bugs,
and especially bugs 'with a history'...

thanks for any help or leads...

ATV is a lot of fun. I believe there is an ATV Repeater in Phil. PA. I am now living in South Central NY. I moved from Baltimore MD three years ago. I am working to get an ATV Repeater here in Elmira, NY.

The repeater in Baltimore is operated by the Baltimore Radio and Television Socitity BRATS.
Every Thursday night they have a net. Voice is on a 2 meter repeater and Video is on the ATV repeater. While I was living in Baltimore I enjoyed these nets a great amount and I am looking forward to seeing something simular here. The BRATS where working on a link with the group in Philidelepha. I don't know weather it was ever set up or not.

When I started in Amateur Radio I was most interested in HF and DX. Now although I enjoy those aspects of Ham Radio I look have to say one of my main interests is ATV. I would encourage anyone who has never checked out ATV to find someone in your area who is active. I would also encourage anyone who is active in ATV to let those in your community know and share the fun.

Well if you have any small kids around you could take two tall garbage cans with the bottoms cut out, tape them together bottom to bottom put in hole to protect against side cave ins. At this point the cans should stick above the ground about two and a half feet. Tell the kid you need the hole deep enough so the cans are flush with ground level. Give the kid a garden troll and bucket and I'll bet it takes the kid less time to dig those two and a half feet than it took you to get the tower out of the ground. Just one idea... Merry Xmas

> and the recieve audio is better to. Thats my two cents worth.
> 73s

Tim,
I couldnt agree more. I own both the 706 and the 70T. I've owned the
DX70T since mid 1995 and the Icom since late 95. After using both
extensively during the past year, I think the 70T is a lot more radio
as far as HF goes. I enjoy CW DXing and I've used both rigs side by
side on a 2 element quad in the midst of some nice pileups.
I've also used both rigs on vacations throughout Asia.

I must say that the Alinco is BETTER ON HF than the Icom...even when the
Icom is equipped with the 250 HZ FL101 narrow cw filter. The Alinco RX
is better...the TX on CW QSK is much better on the Alinco too. I also
find the user interface of the Alinco to be better than the Icom.
Finally, the Icom runs very HOT, especially in the hot/humid southeast
Asia climate. Alinco needs to add a cw keyer and VSWR meter. Otherwise
a winner.

I like the all-in-one feature of the IC-706, but to be honest I use it
more as a 2M/6M allmode rig than as an HF rig. The SSB audio is not
nearly as hot/clear as the Alinco.

> 73, Don, W9SL

I have to agree with both of these fellows, I have owend one for about 2
months now & am very impressed.
Aside from the weak power output & no DTMF dialing it works great , and
the reciever blows my Kenwood TH-78a's out of the water! No intermod
problems with this puppy & I'm only using the stock rubber duckie.
Have not yet modified this unit & to be honest , I don't intend to- it
works fine out of the box , even on 800!
I use a Radio Shack Tone generator to access autopatch, but you have to
be getting in clean into the repeater for the tones to get across good.
I can access most of the major repeater systems in my area, use it on my
commute home just fine. Truly a marvel in "downsizing" of radios, I bet
in year or less Standard will have a model with DTMF functions, they had
the C108 (2meter), then they came out with the C508a.
I am curious on how some of the other antennas rate, they are very
expensive (but pretty), I tried a couple of them out at HRO & did a
quick mini-comparison to the stock Rubber duckie, didn't see much
difference off the bat, if anyone knows a specific antenna that works
much better than the stock model (besides external) that doesnt
compromise it's compactness & is worth the money, please advise.

Hi Nick,

RCI makes an OK 10M rig, as does Uniden but I have found that the Clear Channel Ranger AR-3500 to have
been a much better design internally. The RCI and Uniden radios although sold as "10M" rigs, they are
aimed at the CB'er market and seem to lack in a few areas of quality.

Unfortunately, Clear Channel no longer produces the AR-3500 so finding one may be difficult.

If I had to pick between the RCI and the Uniden, I'd be more likely to get the Uniden.

Jim..

From: markf@col.hp.com
Message-ID: <59m2gt$96k@nonews.col.hp.com>
Source record: 188011

I had one for a few years (while I last had a house). Worked fine.
Broadbandedness seemed adequate. It's heavy, and best I remember it
has a split (halved) boom... meaning that the mast has to slip into
the mounting HOLE (in the boom/mast bracket) from top or bottom while
it's up on the tower. Else, the boom and mast have to be preassembled
on the ground. The latter is much easier, but unless you have a
tremendously-long ginpole, you'll not be able to put the antenna
on a tall mast and gain some height above the top of the tower.

In other words, one doesn't put the mast in the tower first, tie it
too the rotator, and then hoist the antenna next to the mast and bolt
it on right there. The good thing about this design is that there
is a bolt that must go thru the mast to hold the antenna to it... any
slipping due to crosswind happens in the rotator.

I am open to my recollection being corrected by someone that's put
one up since 1988.

That's maybe some help??? It is bandwidth-wise better than the TH6.

-Mark

THE COMPLETE RF TECHNICIAN'S HANDBOOK

(Published by Howard W. Sams, Inc.)

"The Complete RF Technician's Handbook" is THE book for the radio communication's beginner, student, or experienced technician, and supplies priceless information on not only wireless fundamentals, but also the advanced concepts vital to a successful career in RF communications.

Included are over 400 informative ILLUSTRATIONS and tables

The handbook includes everything a technician needs to know in real-world RF electronics -- from the fundamental concepts to the more advanced explanations of modern ANALOG and DIGITAL RADIO circuits and modulation methods. Furthermore, operational instructions on RF TEST EQUIPMENT, as well as identifying proper and improper signal waveforms, and AM, FM, PM, and SSB theory are included. In addition, transmitter and receiver testing methods and TROUBLESHOOTING TECHNIQUES are solidly covered.

Message-ID: <59lhfh$s2q@csun2.csun.edu>
Source record: 188017

Just got my FT50R a few weeks ago and noticed the reception with the
stock antenna isn't all that great.
So after reading the comments of other people here, I narrowed my choices
down to two: Diamond SRH519 and Comet SMA3.
I've read that the Diamond is very slim. Is there a danger of
accidentally bending it and making a permanent fold on it?
Which would you recommend?
I normally listen in the 144, 440, 506, 960 Mhz area.

WRT antennae for the 508, you can't beat the laws of physics,... bigger is better! The standard duckie is OK on the ham bands for which it was designed, but doesn't perform as well 'out of band' as an after market antenna. I have what I believe is a Comet dual band duck that is 10" long, that is an outsatanding performer both in and out of the ham bands,but at 10", looks a little silly on the radio. It is however, amazing what a decent antenna will do with as little as 250mw output. It actually will match the performance of a 2.5W HT with a with a marginal antenna.

Source record: 188021

Nick Feliccia asked about the Uniden 2600

I bought one when my big rig was in for service, and have owned it for about 5 years. They are pretty nice and well built. Two things that I don't like are: 1. power output is non adjustable, 25 watts out (wish it was switchable to 1 or 2 watts). 2. the tx/rx switching is very slow - during rapid-fire contest QSO's, the other party is half-way through their info when the audio kicks in. Otherwise it is a very nice little radio.

About the Ranger/RCI 2950. I bought one and used it for about ONE afternoon before sending it packing. The heatsink is jagged and caught on my finger - ouch! The "VFO" knob is about the size of a toothpaste cap, and when you turn this little toothpaste cap knob, the audio blanks out with each click. Not very useful for the amateur market (but it's not really intended for the amateur market - the "mod" is supposed to be Chimp Simple; a very fitting description).

5391. TS-520S question

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-23 00:00:00 UTC
From: Davew@cris.com
Message-ID: <59mbqk$64p@herald.concentric.net>
Source record: 188022

I recently bought a Kenwood TS520S and while tuning it into a dummy load blew the main fuse (I hadn't read the instructions closely enough). After replacing the fuse, I can tune into a dummy load and the radio puts out about 100W on most bands, but when I measure the plate current idling it's at about 60mA like the manual says, but the meter twitches upward occasionally, (I don't think it did this before). Is something else wrong? Do I need to replace the driver or PA tubes? I can't try the radio out on the air yet, as I'm waiting to get a building permit issued for my antenna. Please reply here or to 150@westside.com
Thanks.

5395. whats up w/ ICOM HF?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-23 00:00:00 UTC
From: hopewell@ctg.net
Message-ID: <851359463.16534@dejanews.com>
Source record: 188026

Hello out there!

What's the deal with ICOM's latest HF offerings? If you'll take a look at their home page, you'll see that all they have to offer now are the IC-706, IC-707, IC-756 (on its way), IC-775DSP and the IC-781. The IC-736 and 738 have mysteriously vanished from their home page, and I noticed on the HRO page that HRO only has a demo IC-738 for sale.

Now I see that HRO has pre-priced the IC-756 at around $2,300. That leaves a HUGE gap in ICOM's HF selection, between about $1,200 (IC-706) and $2,300 (IC-756). NOTHING in the mid-level HF base category. Common sense would suggest that ICOM has another HF radio (competition for Kenwood's new TS-570D, maybe?) poised to strike the market, and they're waiting to get the most advertising bang for their buck on the IC-756 prior to introducing the next one.

Anyone heard anything?

Just curious why ICOM is currently offering low-end and pricey HF, but nothing in what has become a very popular price category (witness the success of rigs like TS-850S, IC-751, FT-990, etc). Watch out, I gotta feeling something's coming ...

Try creating a Dos Boot Disk and running the program under good old DOS
when finished just Boot your computer normally without the Dos Boot Disk.
This will solver your problem running the program but will dedicate your
computer to packet while the program is running.

5397. Any danger in leaving a CPU running constantly?

There are few if any *good* CAT programs for the Icoms, except for
a very expensive commercial one available here in UK.

I wrote my own in Power Basic. It works. It has squelch detect
built in and can scan from an ASCII file, zero and load memories,
but apart from that only does what is already built into my IC736.

Trouble with many shareware/freeware programs is they assume that
every rig has the same rig software address as the writer's and there
is seldom any way of deducing what address the program is using

and/or no way of changing the address anyway. The IC736 can use
a wide range of addresses.

I also had to build my own interface. The CT17 interface only works
in the direction computer>rig and does not have squech detect. A home-
brew interface is very easy to build and cost next to nothing.

Try the ARRL program someone else mentioned, and let us know how you
get on with it.

Source record: 187887

And don't forget to write your representatives in Washing, D.C. They are the culprits who are responsible for your RFI/TVI woes.

Several years ago, the FCC proposed that all consumer electronic goods be made RFI/TVI proof as a matter of law. Average cost to the consumer at that time would have been $1.20 per unit. The lobbyists ganged up on our representatives and persuaded them to refute the FCC's proposal. The FCC lost against big money and now you and I are paying the price.

It is not the ham or cb operator's fault. It is the fault of our representatives in our government.

Radio transmitters are designed to produce RF power at specific frequencies. Receivers are designed to intercept and demodulate these signals. Stereos, cordless phones, etcetera are not designed to intercept RF transmissions. Call your representatives and tell them to force the manufacturers to make consumer goods that perform as RF receivers to get their act together. It is not the ham or cb operator's fault (well, maybe the cb operator...)

Source record: 187891

Bob,

The thru-the-glass antennas I've tried have turned out to be very noisy compared to just about any of the alternatives. It's a neat concept, but in my experience, it doesn't seem to be well suited to "real-world" mobile use.

I would opt for a good magnet-mount or hatchback mount 5/8-wavelength antenna. As a lower-profile or easily-removeable alternative, you might check out the little "candy-kiss" magnet-mount (a really tiny magnet that looks like a Hershey chocolate kiss and just won't budge at highway speeds) antennas that are widely available through the mail and at hamfests. They won't match the 5/8 wave models, but I've tried a couple of them, and had much better results than with my two (former) glass mounts.

Good luck,

Bob Moroney

From: Brian Gould <rmedic@frii.com>
Message-ID: <32C01F90.45BF@frii.com>
Source record: 187892

Hi folks,

A couple of questions for those who might know. .

The extended RX mod for the YAESU FT-5100 Only shows it recieving down to 128 mhz. Is this as low as it will go? also how can you turn on/off the AM mode RX?

Along with this, when you wide RX the radio can you adjust the lower limits on the UHF side down to 410 or 400 mhz. without messing things up?

Now for the FT-8000R question.

The manual is vague about the AM mode, it automatically goes to AM mode when you tune down from 136mhz. I see no way to turn this mode on above the VHF band at all, likewise the AM mode box is "greyed out" on the software when I try to activate it on some of the milair freqs I like to listen to.

Email me if you have any ideas.

The first things to fail will be mechanical. Fans and hard disk drives.
I have seen many fan failures and it is usually due to worn out bearings.
If a cooling fan should fail it is likely other stuff will fail as the
heat builds up in the computer's case.
Also a computer is more likely to fail if it is powered up during a
thunder storm. Often high voltage low energy spikes are induced on the
wiring connected
to the computer (power, serial, network, etc.). The spikes may not have enough
energy to damage the computer by them self. However, they can provide a path
for the high current available from the power supply to flow and damage the
solid state components.

With proper cooling, you shouldn't have any trouble leaving yer computer
on 24-7. And, if you run A Real OS(TM) like linux, you shouldn't have any
trouble on the software side, either:

macross:~$ uptime
2:00pm up 23 days, 8:31, 3 users, load average: 0.12, 0.03, 0.01
macross:~$

WHich sorta brings us to my question. I'm not a ham (yet!), but I am
interested in tcp over packet networks. Specifically, I'd like to network
a notebook in my car to my linux box at home. Now, I know this is gonna
involve mote that just getting a radio & plugging it into my computer, but
what _does_ it involve? Can anyone point me at an URL or something?
Thanx for any help!

Cellular Group advertises that they can modify the Pro 26 along with
many others to receive cell freq. I don't happen to have their address
handy at the moment. They advertise in Monitoring Times all the time.
Maybe someone else has their address or it is on the Monitoring Times
web page.

5423. TS-690S 6M TX Intermodulation

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-24 00:00:00 UTC
From: Bill Evans <bevans@ebsys.mb.ca>
Message-ID: <01bbf1d5$4b2589e0$16b270cc@kbabb.mbnet.mb.ca>
Source record: 187904

I have operated a TS-690SAT for about 3 years since purchasing it. I never used it on 6m until recently and my buddy, VE4APG, reports that the audio is distorted and my signal appears to be generating intermod above and below the carrier.

However, when I move up the band to 52.525, where my antenna has a very poor VSWR and where foldback to about 20 Watts output takes place, my signal is clean and undistorted.

All efforts to generate a clean, clear signal at 50.120 are fruitless. I have tried less mike gain, less carrier and less power output - all with no avail. Does anyone have any suggestions?

Bill Evans VE4UD

Leave it on, I do it all the time and I could not begin to guess how many
thousands of hours on these units. (and they do not even have automatic
powering down BIOS) Hardrives can easily handle the constant running. I
have a old 286-12 that runs pack and has not been shut off for several
months and it still has the ol RLL hard drive. You system will be outdated
or upgraded before you wear it out

That sounds pretty scientific, Roger. Reminds me of the 10 meter after dinner ragchews we use to have:

Station A: I have a new microphone, how does it sound ?

Station B: Awful. Too many lows, no highs, and constricted.

Station C: Sounds OK to me....

Station D: I don't think it sounds as good as your other mic.

Station E: Sounds Great to me.

Personally, I have never heard any Icom HF radio that sounded 'OK' with an Icom stock mic, so I guess either opinons still differ or Icom finally figured out how to make a radio with decent transmit audio. Not that I don't like Icom HF radios, I have four of them, but never could make the audio sound good on any of them without some outboard equalization and a little help from Mr. Heil.

I am looking for a manual (or a copy of) for a Yaesu FT-727R HT Dual Band, just picked one up and have no info on it. Like charge times with certain chargers and there are a couple of features that I am missing like Priority channel.

If anyone has one please e-mail me at: vapor@sd.cybernex.net

5441. Mods for ICOM 211

Newsgroup: rec.radio.amateur.equipment

5444. Re: Standard C508A

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-24 00:00:00 UTC
From: dedger@aol.com
Message-ID: <19961224032700.WAA28850@ladder01.news.aol.com>
Source record: 187965

I agree with the previous postings. The 508A is hands down the best
HT for receiving I have ever owned. I carry mine around whenever I
travel, even overseas, with no hassle--after all, it is no bigger than a
pager with the antenna off.
Recently in Tokyo I bought the latest version of the radio -- the
Standard C701. It looks just like the 508A but has full coverage receiver
and transceive on the 1.2 GHZ band. The receiver is just as hot as the
508A and they have added more memories, 100 in all.
Standard makes great radios.

>
>Does anybody know where I can get a black box to interface an SSB
receiver
>with a laptop computer, in order to pick up Weatherfax images from
satellites?
>I'd really appreciate any tips, sent to my e-mail:
bobcone@rockaloid.com.
The AEA wefax product works well on laptop if you have good vga
type (compatible) display. 640X480 Active matrix works well.
Don't try to display on CGA type laptops. The interface can be built
instead of bought, but it would take me some time to post the schematic
Find the software from DL5YEC and build his interface. Also works
well 73 KD3SH

5447. FRG9600 discriminator access

>I purchased a TS-570D about a month ago. Its a great rig for the money
>but its not a contest radio...(snip)

I was thinking about buying this rig because I do mostly cw work, love to chase dx (when it's there :), and enjoy contesting...

Your comment concerns me somewhat...could you expound on it? I don't have money to waste on any rig that can't live up to my expectations. I only have the money for one rig, and one rig only. It's gotta a good dx, contesting radio...

Any help is appreciated. Thanks.

Have a great holiday season.

John

Want to trade IBM Lexmark Optra R (1200 d.p.i. @ 12 p.p.m.) laser
printer with xtra 2 meg ram & xtra 1 meg flash ram card for IC-706 or
maybe DX-70 or what have you. This is a top of line $1399.00 w/o xtra's.
Printer is as new w/all books etc and has printed less than 150 pages
since new. It was used in Atlanta 96 Olympics as a spare unit for IBM
site. Will only consider gear w/no problems or scratches. Send info to
rdodson@worldnet.att.net

Thnx

Check out the Yaseu FT-50R....
Change the antenna to a Comet SMA-3 - add the commercial battery clip
Change the Batt to Metal Hydride - Do the freeband mod
Then you have the best there is - Preferred by DMAT's and ARES/RACES
groups all over. No, I'm not affliated with Yaseu - Yes, I'm a happy
FT-50R owner ......

This is an interesting comment. I've owned an Icom 740 since it was
new, and am very happy with it. But I hardly ever see commnets about
it. Is there some defect that caused them to be melted down? Do happy
owners keep them a secret?

Seems they'd be a great used rig for newcomers, if you could find one.

Message-ID: <32C2190E.5C15@earthlink.net>
Source record: 187799

Can someone really tell me whaT mil-spec 810 is?
If I drop my HT into the ocean, will it work we I retrive it. I see a lot of hopla on this Mil -Spec., So the case is less likely to break if it drops on the ground.
I would bet my Bendix King or Motorola saber is more rugged than these Mil spec HT's.

Mike

I can't compare the FT-840 to the other rigs your refering to but I
can tell you that I am very satisfied with the performance I get from
mine and the price was definately right. If you plan on doing CW, I
would advise adding a 500Hz filter to the Yaesu. The 2.8kHz filter it
comes with is way too wide.

There is a general coverage tx mod for it too. It can be found at
http://www.qrz.com

5486. Kenwood TM-221A, Lithium battery missing!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-25 00:00:00 UTC
From: garry@shocking.com
Message-ID: <59s2ab$8rj$1@europa.winmail.com>
Source record: 187807

I have the above 2 meter mobile radio that I purchased used but the battery id dead or missing! I took the top cover off and the bottom as well and I couldn't find the battery anywhere. I spent an hour looking everywhere. The only thing is that I couldn't get the front panel off because the king-kong'ish bozo at the factory decided it would be funny to both glue the screws in and tighten them so tight that they could not be removed and I had to drill out two screws after they stripped despite screaming from straining to remove them without stripping em.

Can anyone tell me if the battery is even behind the front panel and the trick to getting the front cover off without having to use a chainsaw or hydraulic woodsplitter so I can replace the battery without having to send my new-to-me radio to the factory for a near eternity? If the battery is not behind the front panel where does it plug into because it is missing!!!

Thanks for the help!

Brian; You can program the VHF lower limit down to the point until
the synth. looses lock. The display will then flash. This happens
around 130Mhz. There is no AM mode available. Good luck
Dave WA0ZZG.

>I could contact to obtain one.
>
Yes it's true. The cable has a small pcb enclosed in the 25pin D
connector, mounting a simple limiter amp. e.g. 741. This is powered from
spare lines on the COM port.

The software - HamCom - drives the lines high + and low - for the rail
supplies and it polls a line from the amp. output at high speed. It senses
data present and calculates validity and data value from the results. This
can be code, rtty, hffax, etc.

Al,

I don't know who you talked to at Kenwood
but the cords are available. They come with the 8 pin connector.
I don't have the part number at the house with me but I can look
it up at the shop tomorrow.

5503. Forget TENTEC vs AMERITRON 811A - go Collins

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-25 00:00:00 UTC
From: Andy Vavra <avavra@erols.com>
Message-ID: <32C1E823.5A35@erols.com>
Source record: 187824

Save your money. For around $500 you can get a Collins 30L1 which runs four 811A's same as these amps and at the same time get a much better piece of equipment. Avoid Ameritron - now owned by MFJ. If you must buy new, go with the Ten-Tec. Good quality, good engineering, but still second fiddle to Collins.

I agree with most of the responses saying it is OK if sufficiently cooled.
On
Novell networks the server is really just a PC and runs constantly. Power
is
protected with a UPS.

Note that some high performance disk drives specify a minimum airflow. To
be safe, run your PC for several hours then quickly open the case and feel
the
drives. If they are hot rather than warm consider mounting a small (3" -
4")
DC fan near the drives. Remember that heat is the biggest enemy of silicon
chips. Also open up the machine periodically and remove dust as it will
accumulate much faster with the fans running all the time.

I always turn off the monitor when not in use to save power and to greatly
reduce fire hazard. Monitors more than any other computer component
cause fires.

I am looking to buy an HF rig. Recently, having posted a request for info
on Alinco DX-70T vs Icom IC-706, MANY responded and I concluded the DX-70T
while it has fewer bells and whistles, HF performance is better. NOW, the
FT-840 price is in the same range as the Alinco.Which one to buy?
Please send me your input on the FT-840 and any comparison to the DX-70T
if any. Also, I am wondering if there are mods for the FT-840. Thanks for
responding. I appreciate the input.

>
All you need now is the $35 service manual to identify the diodes!:>

Actually this mod is almost word for word from the "Radio/Tech
Modifications".

There are 8 diodes located just below the speaker and microphone
connector's. If the radio is rotated upside down (with the speaker
jack to the left) the diode to be removed is the 3rd one down on the
left row. This needs to be moved to the 3rd one down position on the
row on the left. (NOTE: make sure the polarity is the same as the
others in the new row). Also you may or may not have all positons
filled with diodes, it all depends on what model you have. But you
will see two rows of positions in that area.

I know kinda hard to follow, but after you open the radio, it will make
sense.

George

5520. Kenwood TS-570D

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-25 00:00:00 UTC
From: billnancy@sprynet.com
Message-ID: <59qe29$261@juliana.sprynet.com>
Source record: 187930

I purchased a TS-570D about a month ago. Its a great rig for the money
but its not a contest radio. I don't know why QST choose to use the CW filter
over the SSB one. The CW filter is NOT needed and it's a waste of money.
The narrow band SSB filter on the other hand does help out in a pile-up.

QST made mention of the Multi-channel knob being tide to to many features.
I do agree with them on that, but in a short time I got used to using it.

The TS-570D is a great buy for the money. I payed about $400 less then the
list price that was posted in QST. (Mail order from Texas Towers)

If your in the market for a low to mid priced radio, the 570D is a good way to go.

> it's all by itself, no other RF generator's for miles. Will DSP work on
> just plain QRN--FM??

Only if you could do it at the IF/RF level...doing it at the audio level
will not help....natural static peaks about 45-60 Mhz....so lowband
radio, cordless phones and 6mtrs (not to mention TV 2 and 3) all suffer!
What equipment are you running? GE or Motorola...if so, you need to
enable the Noise Blanker in the rcvr if you can (this is only true if the
duplexer is notch only or the rptr is split antennas or split site!)
That WILL make a difference (though in Micors, the NB in those rcvrs
suck!....I prefer GE myself on lowband.....and highband, 220 and UHF!

5525. Digital clocks for the shack?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-26 00:00:00 UTC
From: rocker@datasync.com
Message-ID: <59vdi6$ao4@osh1.datasync.com>
Source record: 187735

I'm looking for a digital clock for my shack that:

* has digits at least 1" tall
* displays in 24-hour format
* reasonably accurate
* not too much hassle to set
* LED display preferred over LCD

The only one I can find in my catalogs that fits the bill is the MFJ-114, and it's not only out of stock everywhere I checked but one dealer has discontinued it due to reputed poor quality. Don't know where to look next...

Any pointers to URLs or company names would be appreciated. Tnx es 73,

Anyone know if the antennas for these radios are interchangable. Was
told they were the same antenna.
Anyone know?
thanks
Lou

I purchased mine new for about $350 so I would say $200 is a fair deal.

5533. Directional ant for BC 200 ?

Do they make, or can one make, a directional antennae for the Bearcat 200 scanner that would fit on the scanner itself ?

I live near an area where they have collared bobcats with little radio transmitters and would like to find out where they go (at a distance).

Thanks - Vince

5536. Myth of IF DSP

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-26 00:00:00 UTC
From: David Ho <davidho@one.net>
Message-ID: <32C2A61E.382C@one.net>
Source record: 187746

Greetings to all!

I am extremely confused by the advertisements about IF-DSP from Yeasu, ICOM, and Kenwood, while I am trying to pick my next HF rig.

Yeasu's FT-1000MP features Enhanced Digital Signal Processing (DESP) for "noise reduction", "contour selection", and "audio equalization". It also says, "... EDSP provides SSB digital modulation, band width filter selection, mike response, and voice pass band tailoring....." But the underlined statement says that "COLLINS" 455 KHz/2.75 KHz SSB mechanical Filter Built in. That's not all, Collins 455KHz/500Hz CW "Mechanical Filter" is an option.

ICOM's IC-775(DSP) says the similar things...."Fully Adjustable DSP Noise
Reduction"... and "Pull Out Those Weak Signals that you've never heard before". Now, optional filters available.....

Newer the better? IC-756 has "Fully tunable IF-DSP" on transmit and receive. CW narrow filters are options.

The most impressive IF-DSP ad comes from Kenwood's TS-870 claiming the crystal filtering is inferior and absolutly no optional metal cubes are needed.

The TS-570D uses AF-DSP. Optional CW or SSB filters can be purchased but
only either one can be installed at any given time. That's not apple to apple so I'll disregard it for the sake of my topic.

Really! Can someone please explain why IF DSP will still need the crystal
filters installed? I thought the idea of having IF DSP is to do away the
need of the good old metal cubes; in addition to the "Pass Band Tuning" (or Slope tunning in Kenwood's term), and noise killing "Signal Processing".

Is the TS-870D on the right track? Or the competitors' implementations make up the lack of what Kenwood is missing when doing it 100% digitally?

Which implementation can really "Pick Up" signals by filtering out QRM and QRN? Which implementations have their short fall? I've heard about the Kenwood's front end overload problem, but is it just a myth?

Thanks for your time.

73!

5537. Opinions on Motorola Walkie-Talkies

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-26 00:00:00 UTC
From: jimr@a.crl.com
Message-ID: <jimr-2612962233570001@a104022.sfo4.as.crl.com>
Source record: 187747

I've been looking at the Motorola VHF/UHF General Services radios (462 MHz). Has anyone had experience with any of the Sport series radios? There are several models that are 2 watts output and now the new ones which don't require licensing but are only 0.5 watt.

The higher power ones advertise a 2 to 5 mile (line of sight) range while the lower power ones are about 1/2 a mile to 2 (line of sight).

Any actual user comments would be appreciated in terms of performance and application.

Thanks,

Jim

FOR SALE:
Double-Pole - Double-Throw Knife Switches
these are great for use in 450 or 300 ohm
ladder line antenna systems, to switch
between two antennas or from one antenna to
two different tuners, etc... they are made
in USA by Leviton, plastic base, all brass
metal parts, 1.25" x 2.25" in size, 6/32 brass
screws for connections. I have seen similar
ones at radio shack (for switching tv lead-in),
but these Levitons are a LOT more heavy duty.
I have used them at KW levels with no problems.
I have about 50 of them left...
I'll mail you 3 switchs for $10. postpaid (USA).

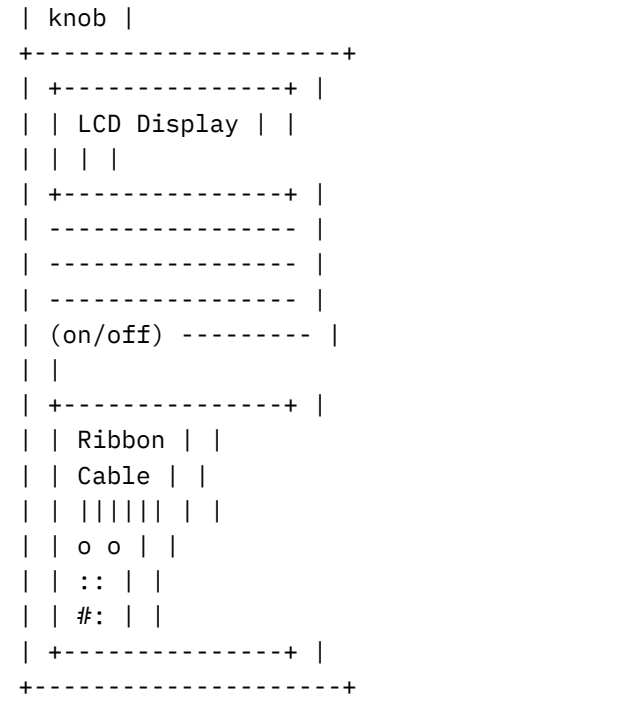
Source record: 187833

Yaesu FT-10 Extended Transmit Mod for 140-174MHz use.

1. Remove antenna and battery.
2. Locate the Ni-Cd battery sticker on the back of the radio chassis.
Pry up the corner of the sticker and peel it off carefully.
3. Remove the two screws located under the sticker. These retain the
keypad.
4. Slowly lift off the keypad. Use care not to dislodge the gasket.
5. Locate and unsolder the 0 ohm chip resistor at location "M" (see
diagram below).
6. Re-install keypad with two screws. Be sure gasket is properly seated.
7. Replace the Ni-Cd sticker if desired. Reattach battery and antenna.
8. Press down and hold the Top-Notch and Lamp button while turning the
radio on.



= Location "M", chip resistor to remove

If memory serves me, the board actually has an "M" near the correct
resistor.

I leave all of mine on constantly for one very important reason. It is best
to reduce the thermal shock of startup on CPU's and memory chips. Consider
that the average 486 CPU goes from room temprature of about 68-74 degrees F
to well over 140 degrees in a relatively short time. This can and does
cause tiny stress fractures that may contribute to component failure.
Repeated startup and cooldown may also cause a component to eventually
"walk" out of it's socket, although this is more prevalant in older
machines. My opinion is to make sure it is adequately protected from
electrical transients, and leave it on! Replacing a fan that wears out is a
lot cheaper than a CPU!

Also if you or a friend are a member of CompuServe you can look in library 14
of the HamNet forum and you will find a small QBasic program titled CI-V.ZIP or
CIV.ZIP. It is a IC-737 control program written in QBasic. It will work with
the 706 and give you a good base to add features to.

>Mike

Mike,

I do not have the actual text of Mil-Spec 810 at hand, but it is quite extensive. Conforming to Mil-Spec 810 can be anything from the color of the paint to some real breakproof stuff. What one needs to ask is what part or /s of Mil-Spec 810 has the unit been tested for. I know some of ICOMs land mobile units meet parts C,D, and E. ICOMs land mobile radios are not waterproof although they are factory mutual intrensically <sp> safe for several classes and groups.

Bottom line is a Mil-Spec radio is not necessarily any better that one that does not meet Mil-Specs. It is doubtful any are using Mil-Spec componets in them. Remember ask for what specific part of Mil-Spec 810 the radio meets.

5548. Yaesu FT-50R Bugs

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-26 00:00:00 UTC
From: anon@intca.com
Message-ID: <32C24D82.2FD@intca.com>
Source record: 187841

I recently purchased a Yaesu FT-50R and am very pleased with it.
However, I have encountered two bugs that I have not seen posted before.
The first is a rather nasty birdy at 146.75, and the second is that the
small speaker symbol in the lower right-hand corner of the display does
not display when a signal is being received (as stated in pg. 50 of the
manual).

Has anyone else encountered these? Does anyone know of any fixes
(especially for the birdy)? The serial # on my rig is of the format
6K111xxx.

Also, is there any way to perform the extended rx/tx mod on radios with
the newer firmware?

Thanks in advance!

>Nick Yatko
>yatkonj@ibm.net

There is a mod for the Pro-26, but you will have to order some parts
for it. You can either order just the UK CPU which takes a
considerable amount of skill, or you can get the logic board with the
CPU already attached. The latter doesnt even require soldering skills,
mainly screwdriver skills. Look at http://www.demon.co.uk/javiation/
for more information under the the Pro-26 subpage. This mod would make
the Pro-26 an awesome handheld. I wish that I had a few extra $$ to
spend.

Richard,
Check this page:

http://www.concentric.net/~n9zle/hc.html

Bruce, N9ZLE sells the hardware interface you need, and will give you the HamComm/JVFax shareware you need to make it work. It plugs into a serial port on your computer, copies CW, RTTY, PACKET (crude form), SSTV, and WEFAX pictures. It costs a whopping $20 usually, but they are on sale for $15 for Christmas. Once you get the software, there are schematics in the DOC files to show you how to build other interfaces if you are interested. I bought one a few months ago, and use if for HF WEFAX pictures, and it works great. Be aware that there isn't any hardware that copies 'perfect' CW. How well any of the hardware devises copy is very dependent on the strength of the received signal and the way the CW is being sent.

Date: 1996-12-26 00:00:00 UTC
From: n5off@aol.com
Message-ID: <19961226135000.IAA20393@ladder01.news.aol.com>
Source record: 187849

I have for sale a GE Custom Executive VHF mobile.

This is a one piece mobile for mounting in the cab of a vehicle, or for base use. Output is 20W, and it has tone squelch, built in speaker, and mic. Presently tuned up in the 154-155 range. With nice original book.

$45

Set of xtals for 154.600 Mhz $7

Set of new xtals for 146.520 Mhz $10

: No birdy here with mine either.

The manual says the speaker is displayed on the lower corner only when you
press the squelch override button (between the PTT and lamp buttons).

Its not the song, Its the singer...

5560. D-104 Microphone Restoration Project

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-26 00:00:00 UTC
From: nitz@selectsa.com
Message-ID: <59u3l1$6ec@clarknet.clark.net>
Source record: 187853

I have recently purchased a standard D-104 microphone with the TUG9 stand. The base of the stand is a grey color and it has many surface scratches in it. I'm interested in re-surfacing and painting it.

Does anyone have recommendations for cleaner, re-surfacing equipment (i.e. will fine sandpaper work?), and brand/type of paint?

I'm also interested in a good cleaner/polisher for the silver sections of both the stand and the "lolly-pop" mic head.

Thank you very much for your help and happy holidays/new year to all.

Ok It is Thursday and I am at work... The part number for the cord is
listed in the TM241A Service Manual as E30-2149-08 and shows to be a
current number in the parts list...

The mikes the others are talking about have the RJ-45 connector on them
and will not be a direct replacement for your mike (you need an 8 pin
mike plug)

The battery is behind the front panel. Besides the four screws you have
already removed the nut on the mike connector and the encoder have to be
removed also. BTW we charge $25 plus the battery to replace it and
turnaround is less than a week...

By the way I have a Motorola Visar that dropped once. It is dead. My Yaesu FT-10R
went down the Subway stairs (2) twice and across the room and hit the wall once.
It still works great and you can't even see the scratch. Both are Mil-Spec 810 rated and you are talking to someone who praises Motorola stuff.

>HT's.

>Mike

Mike,

I do not have the actual text of Mil-Spec 810 at hand, but it is quite extensive. Conforming to Mil-Spec 810 can be anything from the color of the
paint to some real breakproof stuff. What one needs to ask is what part or /s
of Mil-Spec 810 has the unit been tested for. I know some of ICOMs land mobile
units meet parts C,D, and E. ICOMs land mobile radios are not waterproof although they are factory mutual intrensically <sp> safe for several classes
and groups.

Bottom line is a Mil-Spec radio is not necessarily any better that one that does not meet Mil-Specs. It is doubtful any are using Mil-Spec componets in
them. Remember ask for what specific part of Mil-Spec 810 the radio meets.

I would definitely recommend it. Keep in mind that it does not have a DTMF pad for those who want autopatch or repeater control, but if you don't need DTMF I say get it. The price, size and weight are great. It is perfect for carrying in pocket, purse briefcase etc. Get one.

I have a 20 amp Astron supply I'm trying to fix for a retired friend. When ever any load is placed on it drops from 13.8 volts down to 8.5 volts. I have tried calling Astron and asking for help, they don't want to help. This supply was sent back for the same problem under warranty when new. So far I have installed a new bridge, two 2n3771?,the voltage regulator and the 2n3905 and a new triac with no luck. Had any experience with a similar problem? Sure would like to hear from you.

5577. SWR problem on TS-450SAT

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-26 00:00:00 UTC
From: mauricea@glo.be
Message-ID: <32c25e14.22355903@nntp.z03.glo.be>
Source record: 187870

Hi everybody,

I have a TS-450SAT which developed a problem (I think). 2 years ago I installed a Mosley TA-53M antenna (4 el 5 band) and this seemed to work perfect for the limited space I have here. Then after a while I noticed that SWR went up on 20 and 17 meter. On 15-12 and 10 everything was still ok (1:1 SWR) The strange thing was that even while I used the build in antennatuner and while tuning with 10W SWR went 1:1 it started to jump up and down again when in SSB on full power (100W). The same happened on 17 m.
Even after changing the coaxcable this problem remained the same. Then while away from home and using an FD-4 I once again noticed that SWR was jumping up and down on 20meter.
Now I used a TS-50S on the same antennasystem and everything is OK (1.7:1 SWR max on 20 meter that can be tuned with MFJ 941E to 1:1) With this tranceiver SWR is constant so the only thing at fault is the TS450.

Anybody has any idea what the problem might be?

Moving the TRX has no effect (I thought about RFI to the TRX....) The TS-50 was placed on exactly the same spot as the 450...

Please reply via e-mail since we tend to miss a lot of messages from the newsgroups.

Thanks, 73

Over in the comp.sys.ibm-pc.hardware groups, the concensus seems to be: if you only need it for a few hours contigious each day, boot up, use, and shut down. If you come back to the computer every few hours throught the day, you'd be better off leaving it on, untill an expected long period of non-use (like while you're sleeping at night).

Odds are that you'll upgrade to a 80786 (whenever that comes out) in a few years anyway. And we wil be laughing at Pentiums, like the way we laugh at XT's and 286's today.

From: rstevens@voicenet.com
Message-ID: <59uk7m$a0s@news1.voicenet.com>
Source record: 187873

Sure--but first let's look at this another way:

You buy a 30L1, and you get an amp that's no longer made, that doesn't cover 160 meters or any of the WARC bands, that for which any parts will be a real procurement challenge, that may be some predator reseller's military surplus issuance "wiped clean", that may need to be re-tubed (not a lot, but a bit), and whose sale will further erode the amateur radio industry as we know it in America.

That's it--support dead companies!. Let the live ones die, THEN buy their equipment. I get it.

Of course, if you love and run old gear a lot, as I do, these issues are not insurmountable problems (except the last one). But if you're a relatively new operator, or can't see the rig up front (ESPECIALLY in the case of gear that was once procured by the military), or if you hate to see American industry die a slow death, then think again.

Not that there's anything WRONG with Collins (love my 75A3). Actually, I wish I could AFFORD some new equipment.

Happy New Year.

Thanks for your response, but I beg to differ on the function of the speaker indicator. Pg 50 of my manual clearly states "...the BUSY function of the LED is duplicated by the <speaker> icon at the right side of the display when the squelch is open..."

On the subject of the birdy, what is the format of your serial #, and are you using the FTT-12 keypad option?

Thanks again!

5584. DSP & FM????

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-26 00:00:00 UTC
From: Rick Perry <w7av@wolfenet.com>
Message-ID: <32C2EB93.796C@wolfenet.com>
Source record: 187877

Now I'll show my ignorance. Will DSP work on the FM mode for QRN/general high noise level? Have a 6 meter repeater and the noise is quite bad at times. It's not related to any local equipment because it's all by itself, no other RF generator's for miles. Will DSP work on just plain QRN--FM??

Thanks, Rick, W7AV

5585. Yaesu FRG-100B- Where is it?

I have found that you can purchase the radio for about $15.00 less by ordering mail order. Some places ask that you pay shipping. It may even out. Store bought equals taxes but you get the face to face sale, you get to see what you bought BEFORE you buy it and you have a service point that doesn't require to wait a couple of days and risk your radio to the U.S.Post Office. My savings would have been $27 but I felt more comfortable dealing with a local company. Always pay with a credit card for your protection.

I have recently posted an ad for a fellow ham w/o Net access. In the Ad I plainly stated twice that all dealing would have to be made through the seller, and posted his phone number. I received two messages from rather prominent names on the ham groups who are, or give the impression of being, dealers of a sort. Both made offers substantially lower than the asking price, and both stated that they wanted me to present these offers, one said that he couldn't waste money on long distance calls. If you cannot justify the dollar or two it would cost to make a serious offer as overhead, or at the very least as the common courtesy of following the request of the posting, you probably shouldn't be making the offer in the first place. If the price is too high, and you want to make a legitimate offer to the seller, at least make the offer to him as requested. a $5.00 phone call on a 2-300 dollar item isn't that big a bite out of the profit margin, is it?
Bill

5606. Digital Journal Mismanagement?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-27 00:00:00 UTC
From: "Brian K. Short" <ke7gh@primenet.com>
Message-ID: <32C40FCE.7EC6@primenet.com>
Source record: 187699

Please excuse the negative tone of this information, but I am just forwarding it and folks do seem quite interested.

I do not know of a "replacement" journal." QST Jan 1997 had a nice review of the SCS PTC-II Pactor II controller. They have had several advanced digital articles lately. I have not seen nearly the coverage of Clover ANYWHERE else...

I personally will miss the "RTTY Journal." I received it back in the 80's and while not a glitzy, glossy publication at that time, I enjoyed reading it. As you know, the "RTTY Journal" has been around for quite a number of years (I've only been a ham since 1974 myself).

Many have commented about the economic realities of amateur radio organizations (shrinking numbers, reluctant sponsors), but also there has been a large trend to distribute information (more quickly and also more efficiently) via internet. Internet provides EVERYONE with access to "publish." There really are no editors/censors etc on internet (for good or bad).

Personally, if anyone has information of publication quality (or otherwise),
I would be happy to include it in my web page(s) or include a link.

73, Brian http://www.primenet.com/~ke7gh/

All I know is that I --and presumably everyone else-- received a plaintive plea for support from IDRA/DJ earlier this month, with the declaration that the mag was gg bimonthly. I responded with a show of faith-- a check for $32.

So, on the one hand, we have a statement about reorganization and staff changes and a plea for support, answered in my case. On the other hand, we have a flat statement from the departing Editor that the show is over.

Which is it, please?
--
Garry Shapiro, NI6T
Editor, The DXer

I don't want to seem like a Monday morning quarterback, but...

I seem to recall in a recent DJ, there were comments about paying off debt ahead of schedule (correct me if I'm wrong).

I'm no economist, but I do run small business. The way I see it, one
should not retire debt early, unless there is an ABUNDANCE of cash
flow. If anything, debt should be refinanced to extend the term and
decrease each payment, to try to salvage the company during a cash
flow crunch.
Can anyone explain?
73 Barry

I have a Drake TR-4, 80-10 meter Transceiver, AC-4 Power Supply with the MS-4 Speaker. This radio is a one-owner rig & kept under cover when not in use. $325.

Thanks & 73 de Bill, N4DH

5609. Kenwood TM-V7A 2M/440 Dua

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-27 00:00:00 UTC
From: tnic <tnic@styx.ios.com>
Message-ID: <5a13jr$kce@nnrp1.farm.idt.net>
Source record: 187702

Kenwood TM-V7A

I liked the 733. It has lots of features BUT but without the manual the programming was so complicated you were sunk. The 733 also had a nice display BUT many of the display characters were to small too read while driving. The buttons were too small on the 733 also. When you wanted to add a memory you had to keep track of which memories were in use and which were unoccupied. There was not built in CTSS decode ($60 option). Scanning was slow.

The TM-V7A addressed all the problems above. Its easy to read. Its very easy to program. It scans fast. It has all the features of the 733 and lots more in an easy to use package. EXCEPT ONE FEATURE - NO MUTE - If you want to express your Joy about this to Kenwoood they can be reached at 310-639-5300 when the talking computer chip answers hit 2 then 6 OR you can email them at cuyeda@ix.netcom.com They are slow to answer More on MUTE later.

The display looks terrible in the ads but in all but direct sunlight the display looks great. It gets lots of "wow's" from friends.

The characters are very large and easy to read from the drivers seat. When you select a band it displays that band in even larger characters. Even the small words on the display are easy to read from the drivers seat. There is a reverse video setting for those who like that or just need a change now and then. I like normal mode my girlfriend like reverse video mode on the display.

Press the menu button and you can click through a bunch of menus. Each of those menus can take you through sub menus. The "display" menu for instance will allow you to change the brightness, contrast, reverse video or normal, or auto dim. In auto dim you select the brightness you want the radio in. Then when you hit a button the radio gets brighter. after a few seconds it dims again for normal operation.

There is one menu that displays instructions for all the features such as cross band repeat and deleting memories and all sorts of other features.

The menus for adding auto dial memories etc. are all easy to understand.
You can set one band to stop scan on carrier and the other to pause and resume. Or set both bands the same way etc. There are about 20 menus and each has sub menu options.

MENU# Sub Menu

1 Transever guide: (instructions for loads like cross band repeat etc.

2 Front Panel: Number of Channels or "Visual Sacn", Power on message, Multi-Function Button lable

3 Display reverse, Display contrast, Display Dimmer, Auto Dimmer.
4 MEM chan lock out, VHF/UHF Mem Channel Ratio, Mem channel name, Auto PM Channel Store.
5 Automatic repeter offset, Offset Frequency,
6 Programable VFO (Upper/Lower limits (3 sets of limits per band))
7 DTMC Number storeing
8 Scan resume method
9 Advanced Ingercept on/off (Intermode reducer)
10 Atomatic power off
11 Transmit time out timer
12 DTSS Page code transmit delay, auto page cancel, Page Answer back
13 S-Meter squelch, S-Meter Squelch Hang time
14 Beep volume, Speaker config, Voice synthesizer (with optional board).
15 Data Transfer rate, Data TX/RX Band
16 Microphone control, Programable function keys, DTMF Monitor.
17 Reteater TX Hold

And more!

You can do most things right from the mike such as: reverse offset, change power setting, change frequency, direct enter a frequency, move memory to VFO or VFO to memory, turn off squelch, go into Function mode, start scanning, stop scanning, go to call channel, scan call channel and another channel continuously, change the dual bands to VHF & UHF or VHF and VHF or UHF & UHF.

You can listen to AM and hear aircraft communication. I can pick up several airports in a 50 mile radius of my car.

There is a simplex indicator mode which starts flashing if a station is within simplex range (when you activate it).

The CTSS decode works very well while repeater surfing. If you hear a repeater just press the tone button for a second and CTSS scan kicks in. It goes through the PL tones and beeps and flashes when it hits the correct one. If the station stops transmitting the CTSS scan pauses and waits for the station to transmit again. This means only one pass through CTSS is needed to find the right PL.
Programming memory.
Set the channel PL offset etc. on VFO mode then hit the function key. The memory display pops up and shows a solid triangle next to the memory number if the memory is occupied. It displays an empty triangle if the memory is not occupied. Hit memory on the mem number you want and your done.

To give that memory a name - display the memory number you want and hit the menu key. Stop at the memory menu option and select name. Enter the name and hit set etc. The name is programmed in. Its intuitive (at least for me).

There is a memory lock out that allows the scan mode to skip a memory. In case you have a repeater where a blabber mouth wont shut up. The radio is simple enough to do all this while driving.

Some nice features are.
If you were in scan mode when you turned off the rig. When you turn the radio on it jumps right back into scan mode!

SCAN is fast. It looks like the thing is scanning 7 to 10 memories a second. Scan is either stop on carrier or stop for a few seconds. You can set each band differently if desired. You can set 2 upper and 2 lower scan limit ranges for each band. I suppose you could scan 144 to 148 then jump to 150 to 154 mhz with the second set of limits. I have not needed or used the second limit. You can also scan a "call channel" and another channel on each band. The display looks pretty busy when all the scans are going.

MUTE mode is missing.
Kenwood for some reason left off the MUTE mode on this radio. Its on the 733 but not the TM-V7A. This is the only complaint I have. I would not be shocked if later model have mute. The mute key is unassigned on the mike and probably only needs a software change to work. If you want to express your Joy about this to Kenwoood they can be reached at 310-639-5300 when the talking computer chip answers hit 2 then 6 OR you can email them at cuyeda@ix.netcom.com They are slow to answer.

The last menu you accessed is the menu that pops up when you hit menu again. That's nice if you doing the same thing over again. Say you are toggling between normal display and reverse display. The menu take you right back there. If your entering lots of memories the display take you back there etc.

INTERMOD:
I live in Intermod hell. Being just across the Hudson river from New York City there is a constant assault from the building top antennas. I own a Yaesu FT-50R, Kenwood 733 and Kenwood TM-V7A. The Yaesu when hooked up to a roof antenna is almost unusable on some bands due to the Intermod. I ended up buying a $66 notch filter from PAR. That eliminated 98% of the problem.
The TM-V7A has an "anti intermod" mode. The TM-V7A is better than the other 2 rigs. But it still gets blasted when I'm in the city. Just outside the city (5 miles away) I get almost no Intermod but if your looking to totally eliminate Intermod with this radio you are going to need a notch filter.
In reality this is a very easy rig to use while driving. Its full featured. You don't need a manual (once you spend a little time with it). I will be picking a second one up for home use (when $$$ permits it).
I am using the detachable display.
The TM-V7A has LOTS more heat sinks inside and outside than the 733 has.

Audio reports have been very good. Add Mute and the radio is almost perfect!

Source record: 187703

David, I covered this in the .swap group re why DSP at the very low IF freqs is not enough. Many believe this to be a significant design flaw of the TS-870 by Kenwood. The TS-570D (which I have, now) does allow a CW 500 Hz xtal filter to be added. It comes with an SSB xtal filter built in .. so you would only add a narrower SSB filter if you NEVER do any serious CW work. The standard SSB xtal filter, plus the DSP, do a wonderful job on SSB, much better than my TS-440S with narrow SSB filter.

Until they get the IF for DSP up out of the audio freq range, a mechanical (or xtal) filter to avoid upstream blocking is a must. It will happen, but no radio I know of has the A/D technology do operate at 455KHz or higher in DSP today.

Steve, the DSP in the TS-570D is at least as good on CW as using the JPS NIR-12 on the same radio. Overall, having it all integrated into one box is a real plus.

But the 500 Hz xtal filter add in is a must (rig already has an xtal filter for SSB).

Phil W7OX

5612. WANT: GE MVP Radio

Since the FTT-12 has the bug in it does anyone have
the update on how to use the digital voice recorder and paging.
I have the older manual which dont seem to apply.

I cant find an email address on Yaesu home page to request the
updated information.

Steve

From: anon@intca.com
Message-ID: <32C46096.8D@intca.com>
Source record: 187713

Talked to Yaesu tech support, and they confirmed that some FT-50R's have birdy's anywhere from 146.73 - 146.76. They told me if I ship them the unit (it's still under warranty), they will put a new board in it that's hot off of the presses in Japan. This is suppose to fix the problem.

Unfortunately, they would not ship me the board so I could do the repair myself (and save a few weeks of waiting). Hope this helps out any others who have encountered this problem.

Thanks to all who responded!

P.S. Does anyone know what the CPU Clock shift function does????

Nobody has helped you with this yet?

I would post this in the rec.radio.amateur.boatanchors newsgroup to get the finer details, but there is one major point I can help you with--the E.F. Johnson Courier is a linear amplifier that has TWO (count 'em--2) 811A's in it. Not four. I think it has a wacky roller inductor-based final tuning circuit, a la the Thunderbolt and the Desk Kilowatt, perhaps--it's visually similar from a front-panel appearance standpoint--so it may offer continuous coverage from at least 3-30 MHz. If it covers 160 meters, I can't tell you. Tim, WA1HLR runs a Ranger with the accessory plug rewired to put LV B+ on the final, and then drives his Courier that way in AM linear mode, but as a linear, you can use it for CW or SSB, if you're concerned about that. It's a cute little amp, but isn't that easy to beef up, or so I've heard (like with 572B's, etc.)--power supply limitations and such. I think if you had a SSB rig that ran 25 watts on AM and wanted a better AM signal, it would be OK, but there are better ways to go, I would say. Unless it's free, that is. There aren't many of them around.

Happy New Year.

Is it a proprietary interface, or does it have a header that you can graft a TAPR G3RUH modem onto? I would check out the TAPR homepage (sorry, don't have the URL handy). I know there's a 9600 bps solution they have for my PK-232, but I've never pursued it.

Good luck--I snagged the Pactor/Gateway firmware upgrade and the DOS-to-Windows software upgrade to Pakratt for Windows v.2.00 a week or so ago, which I probably would have never missed except I assumed that they were going away forever, and didn't want a dead dog on my hands. Somebody will address the PK-900 if there's any decent installed base, and TAPR's where I'd look first--then PACCOM (sp?).

Happy New Year.

Hello,

I have a htx 100 myself... It looks like it has been through hell, but works great. I picked it up originally for a very low price because of its cosmetic condition and the fact that it had minor problems which i fixed. It is a fabulous little radio when ten meters is open. I have pages and pages of contacts in the log book that I made with that rig and a little ten meter homemade dipole hanging off of a tv antenna. I made the antenna with insulated electrical wire that was destined for the trash can... and it served me very well.

I would be interested in knowing how to make the little radio produce 40W. That would make a great radio for mobiling around and doing DX. Could you mail me (or post for all) the information on doing the conversion or mod.

Thanks and 73

Dan

Happy 97 all

You can easily modify them to 2 meters. However, the receiver and
exciter are on the same board. No isolation. If you use one sealed
mocom70 as the transmitter and one as the receiver, you'll have a
winner! BTW, they make an excellent packet radio. I have three at a
nodestack running flawlessly for 5 years.

Will email u details abt mods for 2 meters.

Source record: 187726

I am going to put my FT757 in the mobil (91 Chevy full size pickup) and would like options on the best type of antenna to use. What kind of experence does any one have with the SGC smart tuner or any of the look alikes?

How about the ProAm 5 bander?
I am sure that the old standby Hustler will work just fine but I don't care for the profile with 3 resonators.

Thank you for your responce.

Dick

Yes it can be done with just one op-amp and a PCB
the size of the RS232 connector. Get Hamcomm (see below)
there is a schematics inside for simple and more complex
interfaces.

http://oak.oakland.edu:8080/pub/hamradio/arrl/bbs/programs/hamcom31.exe

There is also on the Web someone selling some cheap interfaces for
Hamcomm (never tested one but must be a one op-amp solution too)

5636. FT-530 Howling Audio

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-27 00:00:00 UTC
From: Steve Yuroff <yuri@itis.com>
Message-ID: <32C46E81.3935@itis.com>
Source record: 187729

Hello,

I have a Yeasu FT-530 that I use as a "mobile rig", with the display mic and a speaker from a cellphone handsfree kit, attached through the jack on the display mic. I am searching for a way to eliminate the audio "howl" when the volume is set at anything greater than halfway. Using the internal/external options (FM -> 0 -> VFO) dosen't solve it.

The oddest thing with this is that sometimes it insists on howling like a wolf at the full moon, and other days, it behaves very nicely without making a stray noise at all. I can't figure out what causes that!

73,
KB8RFU
Steve.

Alex, I had a problem similar to yours involving the Astron power supply. First check to see if the input voltage to the regulator is sagging. I'll bet you it is! I looked all over the place for the cause and finally found a VERY corroded connection between the PC board the negative terminal of the filter capacitor! Astron suspended the PC board on the firmly mounted capacitor with a large screw. Under the board was a star lockwasher. Dumb construction to be sure! Cliff Buttschardt K7RR

5653. Yaesu vs. Icom / Dual Band HT's

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-27 00:00:00 UTC
From: ccartee@cisco.com
Message-ID: <CCARTEE.96Dec26203737@griffon.cisco.com>
Source record: 187763

I would like to hear any opinions regarding the Icom IC-W32A or the Yaesu FT-51 dual band hand helds...

I've looked through Deja News and it looks like the Yaesu gets mentioned more often. It also looks like the Yaesu has a bit better software support.

I'm leaning towards the Yaesu for the following reasons:

Modifications:
Appears to allow wider band receive _and_ transmit. Would allow transmission on Fire/Police VHF. Also allows transmission on GMRS bands. (I know that transmitting on PS frequencies is illegal and intend to do so only as an emergency measure.)

Only found two Icom modifications, one for enhanced rx range (big deal, already own a scanner ;). The other allows use as cross band repeater, which I believe is standard on Yaesu.

Flexibility:
Yaesu has multi-function speaker/mic with LCD display.

My local salesman at HRO leans towards the Icom because it's cheaper and it will Tx @ 5W with built in battery pack.

Any comments or references greatly appreciated.

Would also like to hear recommendations for other high-end dual band HT's...

I got the following modification from AA5NU:

" To enable AM aircraft receive:

Hold down # key, Mr/B key, and function key at the same time and turn power on. Wait about two seconds and you are good to go. You can also now go into the set mode and change the PL setting to 100 which will give you full frequency input (i.e. all digits must be input). I find the latter feature very helpful in flipping between the ham bands and the aircraft band."

This opens up the receive frequencies enabling aircraft band receive. You'll also be able to enter frequencies that are not receivable, for instance, 25Mhz or 900Mhz. 175.00 can be entered and I suspect the receiver is still sensitive at this frequency; however, this does NOT open the transmit any more than before. I personally would not want the transmitter to operate outside of amateur frequencies because it would be too easy to cause inadvertant interference.

Hello all,

Is there anybody who can help me to suply some info about the
EMPEROR TS-5010.

If anyone know's where to get a service manual, please tell me, (or send
it me if possible, in Email), also i'm looking for the manufacturor.

Any help is welcome, in the hope i can repair my broken emperor ts-5010.

Arjan Filius
Email: iafilius@xs4all.nl

Argh! All right, so how am I supposed to work with Linux when
everything's already been done?! Can't these people leave some
broken MSDOS like parts so there's problems left to solve!?....

Bottom line on dsp hype is. Use your old rig such as the Omni-5, TS-940, TS440, FT-990, IC-765 etc etc etc. with one of the outboard dsp units such as the MFJ, NIR or Timewave. Perfomance will be just as good and often better.

I've used the TS-570. The dsp in it is strictly in the audio section.

DSP used in this manner does not prevent strong signals from desensing your RF stages due to agc pumping. Thus, a TS-450 fully loaded with real filters should outperform it at least in the selectivity arena. The 570 does have more "convience features" so consider all factors before purchasing.

I have a problem with my VFO 230 (goes with TS830).

When initially turned on it works OK, i.e., changes frequency by rotating the dial.....

.....after a few minutes of warm up, the change in frequency does not track in proportion to dial rotation, and after 15-30 minutes turning the dial has no effect on frequency....the display remains the same.

I can use the VFO, however, my using the"memory" feature to "import" a frequency into the VFO.

Has anyone had a similar experience, and found a solution? Maybe I can repair it myself. Noted on Contest Reflector that Kenwood has parts distribution points on the West and East Coasts, so should be able to get parts.

Not to clutter up the newsgroup......pse respond to my e-mail

Hello Anybody,

I have for sale a Rare find Kenwood Tm-441 Japan version uhf
mobile. The radio is in the box and is in near mint condition. It
includes the digital voice recorder and ctcss tone decoder. The rig is
similar to the TM441-A except for the display; that is a multi-colored
L-E-D and the unit is a 1/2 watt, 1 watt, 10 watt power level. Frequency
range is 430-450 mhz. Instruction manual is in Japanese, however you
can get one from kenwood or borrow one from one of our ham friends :)
If you are intrested in a rare collectable; this jewell is a special
item you may not want to pass up.

Asking 425.00$ plus shipping -FIRM-
Intrested? kc6kim@pacbell.net

No key strokes, but diode removal. I do not remember which one needs to be removed on the USA version. Also do be aware the CPU may not allow for a wider receive than you already have. Several years ago ICOM started installing CPUs in some versions that had the frequency range locked in the program code. The european versions are that way. Can not say if the 32E is though. I do know W2E needs to have both CPU s replaced for North American frequency coverage.

Ray,

Check out your local friendly Radio Shack. I recently saw a couple clocks in local RS stores that meet your general requirements, and the prices didn't seem out of line. I have the MFJ clock you've been looking for, and can verify that the quality is marginal. It looks neat, but is a bear to set, and doesn't keep great time. Based on other RS stuff I've owned, the RS clocks have *got* to be better than the MFJ.

Cheers,

Bob K9CMR

5690. TM741E : display backlight refuses to light up

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-28 00:00:00 UTC
From: rlogghe@club.innet.be
Message-ID: <32c59f1e.5029900@news.innet.be>
Source record: 187550

Hello,

I'm using the TM741E for a couple of years now, and I still find it
a nice piece of equipment.

However, some weeks ago the display backlight began to react
quite funny: when I turn the power on, the display backlight
lighted up for a couple of minutes, and then ... gone, no
backlight anymore... The same phenomenon happened
always when bringing up power.
A week or so later: no backlight at all! It refused to light up, no
matter what I tried...

So, are there other guys out there who witnessed the same
thing? And (even more important), what did you do to repair
it?

Thanks in advance!

>Timothy
>KD4IKY

Well, lets see what you need. For mode U/V (the old mode B), you'll need a 70cm Tx and a 2m Rx. Now an easy way to get these is with transverters from a 10m rig (or an old SSB CB). The latter can be had cheap if you don't already have something for 10m. You don't have to convert it, you can choose the crystals in the transverters to go direct to and from CB frequencies. You'll want to mod it to allow enough RIT range to cover between channels, and to allow XIT as well. This is usually pretty easy to do. Down East Microwave sells suitable transverter kits, or you can build from scratch based on the designs in the RSGB VHF/UHF Dx Book. A preamp will be needed, and the ARRL Handbook and the Proceedings of the Central States VHF Conference (available from ARRL) have several suitable designs.

Another approach is to build a 2m Rx and 70cm Tx. The Rick Campbell R2 and T2, described in a QST series and in newer Handbooks, are suitable for this. Kanga sells kits, but these radios are simple enough to build dead bug style. The R2 and T2 are universal designs which can be made to work from LF up through UHF (up to 500 MHz anyway). They use the phasing method to generate SSB and to obtain single signal reception. You have to supply the LO. A VXO and multiplier should do fine. You can find suitable VXO designs in the Handbook. A good mast mount preamp will be required for receive, and any of the ones referenced above should work fine. You'll need a PA for the Tx. RF Parts sells suitable brick amps, as does Down East Microwave. Depending on antenna gain, you'll need from 10 watts to 100 watts uplink power. Err on the side of too much, you can turn it down if you wind up louder than the beacon.

(Note that you can set the R2 and T2 up for 10m and use transverters, as with the CB set recomendation above, if you prefer. There are some advantages to this approach, though it adds some complexity and cost.)

If you'd like to try your hand at digital via the satellite. A suitable receiver for 9600 baud on P3D and the Microsats can be made from a GE UHF Exec II or Mastr II receive strip. Use the temperature compensation input of the Icom (channel element) for doppler tracking. These Rx strips can be found at hamfests for $25, or $50 for a complete radio. The UHF Tx strip can be used as a CW transmitter for mode U/V as is. With 80 watts output, they do great. For data uplink, a VHF version of the Tx strip can be modified for 9600 baud. Disable the PM modulator and use the temperature compensation input to the Icom for modulation (or rewire to use a Motorola channel element and modulate that, it's a bit more linear).

If you prefer to scratch build the FM setup, a receiver based on the MC13135 receiver subsystem chip, and a Tx based on the MC2833 exciter chip, are pretty easy to do. Add a power brick from RF Parts, and you're on your way. Converting the business band radios is so easy and cheap, though, it is really the better way to go.

P3D will have many more modes. Setting up for them will require either more transverters or more radios. Mode U/V and the Microsat style 9600 baud digital mode will likely the be the most popular in the beginning, however, because everyone equipped for Oscar 10 and Oscar 13 will already be set for mode U/V and all the Microsat ground stations will be set for 9600 baud data.

You'll need a pair of steerable yagis or helixes, for mode U/V. You can build these yourself and save a bunch of money. When the sat is near apogee, it hangs in virtually the same spot in the sky for long periods, so you can aim the antennas by hand, no need for auto-tracking, or even for rotators. The antennas don't have to be very high off the ground, since they are looking up. You can use a tripod or post mount and turn them directly by hand as needed. The antennas can be made from a length of 2x2 and use aluminum clothesline wire for elements. There are a number of antenna programs available on the net which can optimize the design for you.

It doesn't have to cost gobs of money to get on the satellites if you use a little ingenuity. You can be on the digital birds for under $100, or on U/V SSB for a bit over $300, if you scrounge and adapt a bit.

The following is worth what you paid for it. I'm sure there are others who can do a better job than I. Nevertheless, I can't resist, so here goes...

As I understand it, for a variety of reasons, the earlier a filter is in the signal chain, the better. This is the basic argument for IF DSP over AF DSP (and other signal processing, AGC, and so on). However, the current state of the art in digital signal processing requires that it be done at a relatively low frequency (below 100 kHz or so?). Image rejection requirements mean that the first IF in an HF rig is at a much higher frequency. Whether DSP is IF or AF, today it's still fairly late in the signal chain. If you want immunity to strong nearby signals, you need to filter them out as early as possible to get them out of the passband of overloadable mixers and amplifiers. This calls for as narrow a filter as possible as early as possible.

An AF DSP unit can indeed knock out interference from the signal in your headphones, but it can't stop the receiver desensing, AGC pumping or spurious signals that result when nearby strong signals are within the passband. An IF DSP may help on AGC performance, and it may be great as

a replacement for passband or slope tuning, noise balnking and other signal processing, but without a narrow filter in the first IF, good dynamic range performance would seem to be hard to achieve. Never having seen any of these new rigs, I can't say whether front end overload is a problem in the TS-870D, but it sounds plausible.

By the way, many hams seem to concentrate on receiver sensitivity as the measure of excellence, but it ain't necessarily so. Perhaps if you are using a linear and a gain antenna in a quiet location, sensitivity is the most important thing to look for -- I wouldn't know. With my compromise antennas, I can copy lots of stations who appear to be unable to hear me even in the absence of QRM, so I guess I've got all the sensitivity I can handle. My main problem is other hams in the neighbourhood with similar operating interests, so freedom from strong signal overload is far more important to me, and DSP, IF or AF, is not that high on my priority list. Your situation may be different.

5694. ICOM IC-1271A Synthesizer Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-28 00:00:00 UTC
From: Dave Hallidy <76342.3662@CompuServe.COM>
Message-ID: <5a4a67$4tk@nr1.vancouver.istar.net>
Source record: 187554

I'm appealing to anyone out there who might have had the same, or a similar problem. I have an ICOM IC-1271A 1.2GHz All-mode transceiver (similar to the 271 and 471 series from the mid-80's). It's been a good performer and I use it regularly on 1296 EME. But, it's developed a problem with its synthesizer. It "wobbles" slightly, causing SSB/CW signals to sound real watery. FM sounds ok. You can imagine what EME echoes sound like- really bad! Anyway, I've looked at the reference oscillator for the PLL and it's fine. They multiply the output of the synth up to get to the LO frequency and it's here where the wobble can be heard. I was told by a friend to replace the caps in the VCO and reference oscillator, which I did, to no avail. What's more interesting, the VCO is actually TWO VCO's, split up to give full band coverage, and the lower freq VCO works fine. The upper (from 1270-1300 MHz) is th bum one, but I don't see any differences between them. Any ideas? Sending it back to ICOM is the last resort, so please don't suggest that, yet.
Thanks in advance.
Dave K2DH

5695. IC-32E..How to make wideband RX?

5698. Mirage D26 final stage oscillates - help!

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-28 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfE35Dy0.JJo@netcom.com>
Source record: 187558

I have a Mirage D26 (440 MHz, 2 in 60 out brick) that was damaged in shipment (the shipper packed VERY inadequately). I've fixed up the mechanical problems, but have trouble with it's final stage (MRF648) oscillating. I've looked at the output on a spectrum analyzer and find stuff about every 30 MHz up thru about 500 MHz. Tried removing collector voltage from the driver (MRF644) stage and no difference. Tried removing collector voltage from the final stage and the oscillation is not present.

The oscillation begins at the first activation of transmit.

Input is on a 50 ohm load. Output is into a 50 ohm load (both bird types) with 50 dB directional coupler into the spectrum analyzer.

Can't find any mechanical sensitivity.

Doesn't seem to be affected by bias on the final stage.

Oscillation continues when amp is in RX mode (no DC bias on transistor bases).

One clue of my own - I found a stray 40 pf chip (old style metal tab type) cap floating around (literally rattling around in the case). This is the same cap as is used in matching both transistors (8 should be in the amp - those are in place and this is an unidentified extra one). No such part found on the schematic and MFJ has no clue about it. I can't see any obvious place where it would have been located. If you have a later model D26 and would care to open it and see if there is a 9th 40pF cap in there, I'd be in your debt!

This is one of the later production units when MFJ had already moved to MS.

Any clues?

I'm going to put a VHF/UHF tranceiver in my Explorer. I like the
FT-8000R because it has such a wide receive. I also have a Yeasu
FT-2400H in my '87 Dodge D-50 and have been very happy with both the
radio and the truck. 8-) Another argument for the FT-8000R.

The C5900DA has a greater (wider) receive along with a greater (higher)
price. It's a triple bander with two frequency displays. This radio has
more features than the Yeasu but I don't have any experience with Standard.

Any one have opinions on either of these radios?

Source record: 187564

Help! I just received a 220MHz KDK4033 as a gift in need of repair, and I need the manual and schematic (or perhaps some direction) to get it on the air. The receiver is fine. The problem is the transmitter - the frequency drifts a few seconds after you key it up, throwing it off enough to make it worthless for simplex or repeater use (I may as well use it for spread-spectrum - hi-hi). Could I just shotgun it replacing the PLL crystal(s)? Any help here is appreciated. I'm trying to get the radio up for use on the Condor net here in California.

This may sound silly, but I would just get a cheap CB rig (one of the real small ones) and use that. You can pick these things up for $5-$10 at a lot of flea markets. Probably cheaper than buying the parts. And you certainly don't have to ever turn on the 11-meter part.

5710. Icom IC02at audio output problem

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-28 00:00:00 UTC
From: Mike.Ward@f150.n2613.z1.fidonet.org
Message-ID: <852225532.AA06637@rochgte.fidonet.org>
Source record: 187570

I was using one of my IC-02at radios the other day (for packet) and noticed that I was not receiving any responses to my packets.

I pulled out the plug that goes into the earphone jack and found that there was no audio. I thought that the problem might be with the battery, so I hooked it up to the 12-volt supply. Using this source (or a BP-7 13.2v battery), I found that I do get some low-volume audio. However, it is not enough to be useable.

Does anyone recognize this symptom (voltage-dependent volume) and have any idea what the solution might be? Thanks for any help you might have.

I've bought 3 scanners from Pawnshops and have always gotten good prices
and good products. They take them only if they work properly, because they
don't want to lose their collateral if the units don't work. Also, most
people that pawn their equipment don't intend to lose their items, but just
don't have the money to get it back. I'm on very friendly terms with three
pawnshops in my area, and they will let me know if they have something I
might be interested in. One even has ham gear once in a while. If it were
me, I would grab that scanner before someone else does!

I am looking for a fairly heavy stainless steel spring to mount by mobile antenna on. I used to have a military version for years but it finally gave up the gost. Then I purchased one from Hustler "the heavy duty type" I was told. The thing is puny to say the least. When I have my 20 meter resonator on the mast it flops around like a cows tail. If anyone has such for sale or knows where i can find such, would you please drop me a line at garyh@ezonline.com

Thanks

Hi Phil, Interesting comments on the IF versus AF DSP scheme. I'm curious how the 570 is on cw. One guy commented that it is hardly a contest rig. It was also interesting to note your comparison to a TS440S. Not to be critical to your post, but I think the TS440S was one of the worst receivers ever manufactured (especially on CW). Curious how much better the 570 really is.

Thanks,
Joe

Source record: 187642

The FCC, on August 5, !996 adopted a rule which partially pre-emts the enforcement of community association restrictions with respect to satellite dish antennas, broadcast television antennas, and other communication reception devices.

The above statement is the leading sentence of a memo sent to the Board of Directors of my community's Home Owners Association.
I will try to convey the main points.

"Under the new rule, any association Covenant, rule, or similar restriction which "impairs" the installation, maitenence or use of certain antenas is UNENFORCEABLE."

Antennas protected include dishes up to one meter and any size antenna designed to recieve television broadcast services.

The FCC rule allows communities to regulate antennas so long as the restriction does not "impair" the installation, maitenence or use of the antenna.

HOA's can regulate the placement of antennas so long as the reception would not be compromised

>Timothy
>KD4IKY

Well, lets see what you need. For mode U/V (the old mode B), you'll need a 70cm Tx and a 2m Rx. Now an easy way to get these is with transverters from a 10m rig (or an old SSB CB). The latter can be had cheap if you don't already have something for 10m. You don't have to convert it, you can choose the crystals in the transverters to go direct to and from CB frequencies. You'll want to mod it to allow enough RIT range to cover between channels, and to allow XIT as well. This is usually pretty easy to do. Down East Microwave sells suitable transverter kits, or you can build from scratch based on the designs in the RSGB VHF/UHF Dx Book. A preamp will be needed, and the ARRL Handbook and the Proceedings of the Central States VHF Conference (available from ARRL) have several suitable designs.

Another approach is to build a 2m Rx and 70cm Tx. The Rick Campbell R2 and T2, described in a QST series and in newer Handbooks, are suitable for this. Kanga sells kits, but these radios are simple enough to build dead bug style. The R2 and T2 are universal designs which can be made to work from LF up through UHF (up to 500 MHz anyway). They use the phasing method to generate SSB and to obtain single signal reception. You have to supply the LO. A VXO and multiplier should do fine. You can find suitable VXO designs in the Handbook. A good mast mount preamp will be required for receive, and any of the ones referenced above should work fine. You'll need a PA for the Tx. RF Parts sells suitable brick amps, as does Down East Microwave. Depending on antenna gain, you'll need from 10 watts to 100 watts uplink power. Err on the side of too much, you can turn it down if you wind up louder than the beacon.

(Note that you can set the R2 and T2 up for 10m and use transverters, as with the CB set recomendation above, if you prefer. There are some advantages to this approach, though it adds some complexity and cost.)

If you'd like to try your hand at digital via the satellite. A suitable receiver for 9600 baud on P3D and the Microsats can be made from a GE UHF Exec II or Mastr II receive strip. Use the temperature compensation input of the Icom (channel element) for doppler tracking. These Rx strips can be found at hamfests for $25, or $50 for a complete radio. The UHF Tx strip can be used as a CW transmitter for mode U/V as is. With 80 watts output, they do great. For data uplink, a VHF version of the Tx strip can be modified for 9600 baud. Disable the PM modulator and use the temperature compensation input to the Icom for modulation (or rewire to use a Motorola channel element and modulate that, it's a bit more linear).

If you prefer to scratch build the FM setup, a receiver based on the MC13135 receiver subsystem chip, and a Tx based on the MC2833 exciter chip, are pretty easy to do. Add a power brick from RF Parts, and you're on your way. Converting the business band radios is so easy and cheap, though, it is really the better way to go.

P3D will have many more modes. Setting up for them will require either more transverters or more radios. Mode U/V and the Microsat style 9600 baud digital mode will likely the be the most popular in the beginning, however, because everyone equipped for Oscar 10 and Oscar 13 will already be set for mode U/V and all the Microsat ground stations will be set for 9600 baud data.

You'll need a pair of steerable yagis or helixes, for mode U/V. You can build these yourself and save a bunch of money. When the sat is near apogee, it hangs in virtually the same spot in the sky for long periods, so you can aim the antennas by hand, no need for auto-tracking, or even for rotators. The antennas don't have to be very high off the ground, since they are looking up. You can use a tripod or post mount and turn them directly by hand as needed. The antennas can be made from a length of 2x2 and use aluminum clothesline wire for elements. There are a number of antenna programs available on the net which can optimize the design for you.

It doesn't have to cost gobs of money to get on the satellites if you use a little ingenuity. You can be on the digital birds for under $100, or on U/V SSB for a bit over $300, if you scrounge and adapt a bit.

Hello,

I have a htx 100 myself... It looks like it has been through hell, but
works great. I picked it up originally for a very low price because of
its cosmetic condition and the fact that it had minor problems which i
fixed. It is a fabulous little radio when ten meters is open. I have
pages and pages of contacts in the log book that I made with that rig
and a little ten meter homemade dipole hanging off of a tv antenna. I
made the antenna with insulated electrical wire that was destined for the
trash can... and it served me very well.

I would be interested in knowing how to make the little radio produce
40W. That would make a great radio for mobiling around and doing DX.
Could you mail me (or post for all) the information on doing the
conversion or mod.

Thanks and 73

Dan

Happy 97 all

From: Dave Hallidy <76342.3662@CompuServe.COM>
Message-ID: <5a2eqqkcs1@mhafn.production.compuserve.com>
Source record: 187654

I'm appealing to anyone out there who might have had the same, or a similar problem. I have an ICOM IC-1271A 1.2GHz All-mode transceiver (similar to the 271 and 471 series from the mid-80's). It's been a good performer and I use it regularly on 1296 EME. But, it's developed a problem with its synthesizer. It "wobbles" slightly, causing SSB/CW signals to sound real watery. FM sounds ok. You can imagine what EME echoes sound like- really bad! Anyway, I've looked at the reference oscillator for the PLL and it's fine. They multiply the output of the synth up to get to the LO frequency and it's here where the wobble can be heard. I was told by a friend to replace the caps in the VCO and reference oscillator, which I did, to no avail. What's more interesting, the VCO is actually TWO VCO's, split up to give full band coverage, and the lower freq VCO works fine. The upper (from 1270-1300 MHz) is th bum one, but I don't see any differences between them. Any ideas? Sending it back to ICOM is the last resort, so please don't suggest that, yet.
Thanks in advance.
Dave K2DH

Heard from a source directly from ICOM that thyey are considering coming
out with an improved version of the Icom 706 called the ICOM 706 MARK II
I have no idea what the improvements will be.A guess would be 440 mhz
at 35 watts and 2 mtrs at 45 watts. That is what a Yaesu Rep told me
Yaesu is coming out with this JUNE 1997!

5742. ICOM 780 ??

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-28 00:00:00 UTC
From: hershman <hershman@ix.netcom.com>

Source record: 187665

WAS considering getting a TENTEC AMP with the 811A in it called the
CENTAUR. I went to the TENTEC REFLECTOR site and saw lots of complants
about constant "ARCING" during tune up. Also gettin aloud thud during
"TURN ON". If this is happaning please get back to me so I also don't
make a mistake. I guess the alternative is to get either the AMERITRON
811A or 811B. My only concern is that Ameritron is ouned by "MFJ".
In the past I have had a lot of trouble with the poor quality-cheap
products of MFJ.I don't want a collins amp since I want 160 meters plus
the WARC bands.

5744. GPS / Radio Equipment for sale

Well here is the list. Most of this equipment was hardly ever used. I am
getting out of many parts of ham radio concentrating on my UHF repeater and
links to it. I will pay for shipping. Can do COD or check in advice.
Please pass on this message to others that may be interested. If you are
on packet please post it on the local BBS. Trying to generate revenue.
Thank you for your time. People have asked if I was a smoker. No I nor
anybody
in my home smokes. The TS-690SAT is stock out of the factory with no extra
filters. If interested will discuss other offers. Need cash. I have
references to others
that I have sold via e-mail/UPS and they were very happy.

Joe,

The 570D is MUCH better than the 440 .. and, I'm told by a former owner, much better than the 450 as well.

With DSP NR-2 switched in, the CW signals jump out at you, with no noise. The bandwidth can be set down to 50 Hz; usually I tune at 400-600 Hz and reduce if needed.

Now I must add the caveat that I do a lot of CW operating with QRP kits that I've built, with an outboard SCAF filter. So it may be argued that I'm not the best judge of a good "contesting" radio.

Still, the 570D is the nicest radio I've laid my hands on.

There was a very extensive (and favorable) review of it posted in one of the newgroups about two weeks ago. Alas, I think I saved in another computer, or I would attach it now.

Ray,

Check out your local friendly Radio Shack. I recently saw a couple clocks in local stores that meet your general requirements, and the prices didn't seem out of line. I have the MFJ clock you've been looking for, and can verify that the quality is marginal. It looks neat, but is a bear to set, and doesn't keep great time. Based on other RS stuff I've owned, the RS clocks have *got* to be better than the MFJ.

Cheers,

Bob K9CMR

Hi Robert,

Please find some info on the memory module of your 751, It was taken
from the internet somewhere.

Best Luck,

PE1FBO,
Fred de Vries

THIS INFORMATION WILL COMPLEMENT THE PRODUCT REVIEW THAT WAS
PRESENTED IN THE JULY 94 ISSUE OF QST (PAGE 79)

THE WILLCO ELECTRONICS ICM-1024 ("NO FAIL" MEMORY FOR ICOM RADIOS)
CONTAINS A READ ONLY MEMORY THAT STORES THE RADIO'S IMPORTANT DATA.
WHEN THE BACKUP BATTERY DIES, THE RADIO WON'T FAIL!

MORE MEMORIES THAN YOU'LL EVER NEED!

USING A 32k RAM THE ICM-1024 INCREASES THE MEMORY SIZE 32 TIMES
PROVIDING UP TO 1024 LOCATIONS (INCLUDING THE IC-745) FOR FREQUENCY
AND MODE TO HELP YOU MANAGE YOUR FREQUENCIES, WILLCO ELECTRONICS
PROVIDES A MEMORY LOG SHEET AND UTILITY WORLD'S HOT 250 H.F.
FREQUENCIES ARE PRE LOADED ("UTILITY WORLD" IS EDITED BY LARRY
VAN HORN AND PUBLISHED BY MONITORING TIMES MAGAZINE).

EASY TO INSTALL

THE ICM1024 IS EASY TO INSTALL AND IT CAN BE USED AS A 32 CHANNEL
DIRECT REPLACEMENT FOR ICOM'S EX-314 RAM UNIT.

WHEN INSTALLED IN THE R71 or IC-751, THE 32 BANKS CAN BE ACCESSED
DIRECTLY FROM THE RADIO'S FRONT PANEL WITHOUT ADDING PUSH BUTTONS
OR SWITCHES. THE HEART OF THE ICM1024 IS A CUSTOM INTEGRATED CIRCUIT
THAT HANDLES DATA AND BANK SWITCHING. (THE IC-745 REQUIRES EXTERNAL
SWITCHES.)

HERE'S HOW IT WORKS

BY CONNECTING THE ICM1024 RIBBON CABLE TO THE R71 MATRIX BOARD, THE MEMORY NUMBER (THAT'S DISPLAYED ON THE RADIOS FRONT PANEL) CAN BE USED TO CHANGE THE BANK NUMBER.

WITH OR WITHOUT THE IC-EX310 SPEECH MODULE , THE SPEECH BUTTON ON YOUR R71 WILL SERVE AS A BANK=MEMORY SWITCH. TO RAPIDLY CHANGE BANKS, SIMPLY ROTATE THE MEMORY KNOB AND SELECT A MEMORY. THEN PRESS THE SPEECH BUTTON AND THE BANK, (THAT CORRESPONDS TO THE MEMORY NUMBER) WILL BE SELECTED.

EACH TIME YOU PRESS THE SPEECH BUTTON ON THE IC-751, YOU STEP TO THE NEXT BANK. THE FUNCTION BUTTON REVERSES THE STEP DIRECTION AND THE XIT/RIT RESET BUTTON JUMPS YOU BACK TO BANK 1. THE IC-745 REQUIRES 3 EXTERNAL SWITCHS.

BY PLACING A FREQUENCY (THAT CORRESPONDS TO A BANK) IN A MEMORY LOCATION, YOU CAN DETERMINE THE BANK NUMBER. FOR EXAMPLE, 2.2 MHz IN MEMORY 32 CAN INDICATE THAT BANK 22 WAS SELECTED.

EXTENDED FREQUENCIES

THE RECEIVE FREQUENCY LIMITS ROM WHERE MODIFIED AND NOW THE RADIO CAN TUNE FROM 10KHz TO 31 MHz. (MODELS IC-751, IC-751A, IC745 AND R71). HERE IN THE MIDWEST, FOR EXAMPLE, I CAN COPY RTTY ON 48 kHz, THE S.L.F.C.S. (Survivable Low Frequency Communications System) TRANSMITTING FROM SILVER CREEK NEBRASKA IN THE CLEAR!

CONTACT; WILLCO ELECTRONICS, P.O. BOX 788, NEW LENOX, IL 60451.
PHONE (815) 723-1874

You can also reach us on Compuserve at 74562,2673 and America On Line at WILLCO788

our Internet address is willco788@aol.com

> Thanks in advance.
> Dave K2DH

Dave,

Here's a service buletin from ICOM which might give you some help.

Most Common Failures and Cures for the Icom IC-271A/H

Symptom: "Rushing water" or "aurora" sound in FM receive
audio. SSB sounds raspy and distorted.
Probable Causes: 1) Bad plastic trimmer capacitors on HPL
unit. 2) Old, dried out electrolytic capacitor C2 on HPL
unit is allowing regulator to oscillate.
Cure: Replace faulty trimmers C16 and C78 on HPL unit with
ceramic versions. Replace C2.
Remarks: To allow proper alignment of ceramic trimmers,
reverse values of C16 and C78: Make C16=12pf, and C78=6pf.

Symptom: Frequency instability.
Probable Causes: 1) Bad plastic trimmer capacitors in HPL
unit. 2) Bad solder at IC2 regulator on HPL unit.
Cure: Replace trimmers as stated above. Resolder cracked
joints at regulator.

Symptom: No RX/TX, or no RX/TX when unit warms up. Unit
may have dead spots in tuning range. Inspection reveals

that the HPL loop is unlocked. Trimmer capacitors on HPL unit have already been replaced.
Probable Cause: Bad C9 on HPL unit.
Cure: Replace C9 (1uF, 50-volt) BP capacitor on HPL unit.

Symptom: No frequency display, only decimal points. Problem may be intermittent or temperature related.
Probable Cause: Display DC-DC converter has noisy output.
Cure: Replace all of the following dried-out electrolytic capacitors on the display unit: C3, C6, C7, C8, C9, C10, C11, and C14. (These capacitors are dark to light blue when they are new. Capacitors that have turned gray are old and dried-out.)
Remarks: While servicing the DC-DC converter section, look for cracked solder joints as this section of the radio tends to run hot. Also, we recommend reprogramming the RAM card after servicing the DC-DC section.

Symptom: Erratic display i.e., frequency listed will be out of the normal operating range of the radio. Rotating the VFO knob may cause strange characters to appear in the display. Cycling the power switch a few times may restore operation temporarily.
Possible Causes: 1) Cracked solder on RAM unit is causing logic errors. 2) Program in RAM unit is corrupted. 3) IC21 regulator on logic unit is producing noise or oscillating.
Cure: Replace filter capacitors C11, C26 and C26 on logic unit if they appear overheated or dried out. Resolder cracked joints at J1 and J2 connectors on RAM unit, then reprogram. If this does not help, substitute RAM unit with a known good one. If the substitute RAM unit works properly, then the RAM unit must be replaced. If the substitute RAM unit does not cure the problem, there may be noise from the DC-DC converter causing the logic unit to glitch. Follow instructions for the previous problem.

Symptom: Intermittent RX/TX. May have dead spots in tuning range.
Probable Cause: Bad data to HPL unit.
Cure: Resolder joints at J11on logic unit. Resolder other suspected poor joints on logic unit. If this does not help, there may be a problem with RAM unit or associated circuitry. (See previous listed repair)

Symptom: CPU noise in audio.
Probable Cause: Poor ground on display unit.
Cure: Tighten the three screws that hold down the display unit PCB. If this does not help, install a plastic-coated metal shield over the display unit. (This type of shield is available through our parts department.)

Symptom: Loud, high pitched-squeal emanates from inside radio.
Probable Cause: DC-DC converter transformer has a loose core.
Cure: Replace T1 (TO-9) on the display unit.

Symptom: Very low RX sensitivity.
Probable Cause: Bad Q7 on YGR unit.
Cure: Replace bad Q7 (2SK125).

Symptom: No RX. Investigation reveals that T/R relay (RL1) on filter unit does not release in receive mode.
Probable Cause: Leaky Q39 on main unit.
Cure: Replace leaky Q39 (2SC2785).

Symptom: Drastic change in audio frequency response between USB and LSB., i.e. USB audio has too much bass while LSB audio has too much treble. TX frequency response is also poor.
Probable Cause: Misadjustment of the BFO or a faulty crystal filter.
Cure: Realign the BFO. If this doesn't help, then the problem is most likely a bad FI-1 on the main unit (10M24D4).

Symptom: VFO tuning is erratic. Sometimes frequency doesn't increment steadily when VFO knob is turned.
Probable Cause: Dirty rotary encoder.
Cure: Remove white plastic cover from back of rotary encoder and spray-clean the carbon track with Blue Showers solvent. Spin VFO knob vigorously while spraying.
Remarks: Do not let solvent saturate the display unit or allow it to come into contact with the plastic display lens. Stuff a paper towel between the rotary encoder and display unit to catch spray run-off.

Symptom: In 271H, low TX power output with high current draw from the power supply.
Probable Cause: Bad C28 chip cap on PA unit.
Cure: Replace C28.
CJR 2/96

Brian,
Use a MSTR EXEC II instead unless you plan to run LOW power on the MVP (say 15 watts or less)....the MVP is not meant for high power 100% duty on VHF...the UHF models are ok....but I would not subject a VHF model to that...get a 40watt or 65 watt EXEC II or 100watt and set it to 40watts max....(the others can also run at 40 because they have enough heatsinking....the 100watt cannot run at 100 for long...at 40, they last!)

You can find EXEC IIs in a lot of commercial trade mags for about 70-100 bucks....

I may have one I might be willing to part with....(I'll look and see; I think its a mobile phone...RCC style....type EXEC II....already does full duplex but needs a squelch circuit...which the MICOR chip does really well!)

Hello, OM,

I have ICOM IC-738. I have been looking for modification info to extend
its xmit coverage for MARS Op.

Is any one has an idea ? I will be very much appreciated

Have to disagree, Andy. The new Ten Tec Cenataur is a fantastic
amplifier.
While good, the Collins 30L1 does not offer qsk out-of-box. I would
personally pick a new TenTec amp over a 30 yr old Collins amp. Also,
the
30-L-1 does not do very well on the warc bands...and I recall it wont do
top band w/o some mods.

regards,
Joe BV/N0IAT

5762. Mocomm-70 Good For 2 Meter Repeater??

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-28 00:00:00 UTC
From: n5zgt@swcp.com

Hello Everybody,
I have two Motorola Mocomm-70's and I am wondering if they are good radios to use as a 2 meter repeater transceiver. How can I convert them to 2 meters (Any documents, web pages, etc.?)? Can one be used for both transmit and receive for the repeater? Anything else I should know?
Please e-mail me at: n5zgt@swcp.com
Thanks!
73,
Brian, N5ZGT

I have the same birdie on my FT-50. Also, my manual reads as yours on
page 50, and the speaker icon only appears when the squelch overide is
pressed.

Serial no. is 6K112381 and I'm not using FTT-12 pad.

>
> Gary

Good point Gary. Motorola and the other major land mobile manufacturers
are guilty of mis quoting "Mil Spec 810" They would like you to beleive
that you are getting something that will withstand battlefield
conditions and therefore suitable for any public safety or commercial
environment. However, as you said, the standards are quite lengthy and a
radio may be "Mil Spec" even though it can withstand only a light rain.
Always be sure to specify what you expect the product to do. If it is to
be routinely doused from an errant fire hose or submersion in 10 feet of
seawater without damage, then specify that it should be capable of that
treatment. By the way the military is getting away from Mil Spec and
seeking a cheaper alternatice called COTS (Commercial off the shelf).

> cross band repeater, which I believe is standard on Yaesu.

If you're interested in cross-banding, get the Yaesu. I have the
IC-W31A, Yaesu 530, & have played with a 51r for a while. Yaesu is more
flexible in crossband mode, allowing different pl tones on each band, no
squelch tail, ability to use keypad while crossbanding (Icom is locked).
The Yaesu will even scan in while crossbanding (for whatever reason).

Source record: 187483

Hi John:

I have a Kenwood TS-870 and I like it. I have owned several transceivers including a Kenwood TS-950 and my pick over all of them is the 870. It is not a simple radio however. There is a menu system that sets the radio up for use and that menu system has 68 items on it. It is important that you clearly understand the meaning of each of the items to make the radio behave as you want it to. It has one of the finest receivers I have ever used and it has all of the DSP features built in. There have been a number of posts in the swap group offering the 870 for sale at what I believe to be very low prices. That might indicate some unhappiness with the radio. I believe that is due to the complicated set up that is required and the frustration with the radio over it. Again, my opinion, I like mine and think it's a very nice radio.

I tend to agree with Steve, N4LQ. I prefer a rig with crystal filters and outboard DSP. I have owned a Kenwood TS870 and I am now using a JST-245 with the NIR-12 audio DSP. Although, the ability to vary the bandwidth digitally with the 870 was nice and really functioned well, the noise reduction mode, auto notch and beat cancel didn't perform as well as I thought they should, based on Kenwood ads.

Good luck!

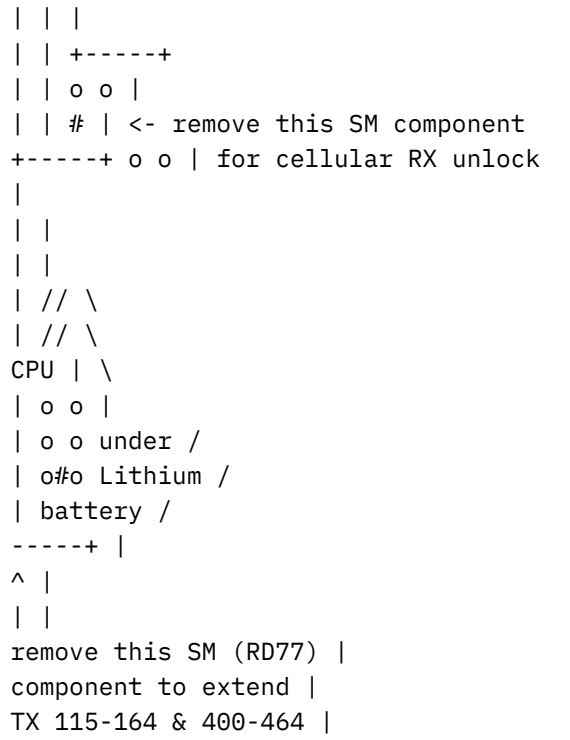
>>Does anybody have any info on what mods are possible for The C508A
>>Standard Dual Band Micro size HT? Wondering about extended XMT
>>abbility in particular.

Subject: Standard C508A mods

top right-hand corner



The following procedure involves removing the
lithium battery which saves your memory channels.
Note any memory channels you wish to save -- you
will have to re-enter them. Also note the placement
of the battery before you remove it, since you don't
want to put it back in the wrong way.

Remove the 4 screws from the back of the radio and
separate the front and back pieces. Be careful not
to damage the flexible cable connecting the two.
Unsolder and remove the lithium battery, being careful
not to short-circuit it. Remove the surface mount
chip resistor RD77, at the fifth pin of the CPU chip,
counting up from the bottom. Two component pads
above it are already empty. To permit RX of cellular,
also remove the surface mount component depicted in

the diagram above, way in the upper right-hand corner.
Resolder the lithium battery back into place, noting
that the polarity is correct. Press the reset switch,
and reattach the two halves of the radio. Place the
batteries back in and power on.

From scottw@atlcom.net Mon Sep 30 14:48 MST 1996
Subject: Revision of modification to model C-508A

Seperate radio halves, DO NOT desolder lithium battery, use wood carving
razor to remove SM. Razor must be long, sharp and thin at which point
you can get up under the SM and pop off. Remove SM's and press reset
button, reattach two halves. Place batteries back in and power on.

I don't know if this will work on the IC-W32E, but on the US version turn the power off, then press and hold the Squelch, Band, and Power buttons for five seconds. The left receiver will have more bands providing coverage from 108 thru 999 MHz except for 200-300 and cellular.

5790. FT50R versus other handhelds

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-29 00:00:00 UTC
From: Michael Aust <maust21401@earthlink.net>
Message-ID: <32C7525A.2A48@earthlink.net>
Source record: 187499

I just got two FT50R hand helds.
I noticed something unique in the
performance of the FT50R.

I use to have an Icom W32A and a
Kenwood TH79AD, when I put both the
W32A and TH79AD, on 2 meters, both
go crazy with noise generated from
the computer.
Now I have the FT5OR, I have no
computer interference in to the radio,
while it sits on top of the computer.

Anyone else notice this. I believe ,
since the FT50R has a 45Mhz IF that the
images are 90Mhz away.

Also, I noticed less frequency mixes
into the receiver which may explain why
its better.

I am not saying its intermod proof, a
highly radiated multi-repeater site
can drive most radio's crazy.

I am amazed that possibly that someone
did their homework on the spur analysis.
I heard one guy who had an FT50R with a
birdie spur at 146.75, I scanned both of
mine in that area, mine are SN# 6J series,
these was a post Yaesu had a fix, anyway,
it seems the the New FT50R's really perform
well.

73

Mike

I really like the Hyper scan rate
of the FT50, can scan all 112 memories
in less than a few seconds, even with
CTCSS, try that on a W32A or TH79AD,
its slow there.

Message-ID: <n3xcm-2912961255260001@phd-as12s14.erols.com>
Source record: 187501

I bought the IC-W32A and two days later spent the extra $30 for the 51R. I didn't like or feel that I needed two control knobs on the top of the HT, and also felt that the software support for the 51R was better. I haven't regretted my purchase and think that it is a fantiastic little rig, I think that the audio is great and can't think of any features that it is missing. My brother just bought a FT-50 and thinks that it is a great little radio, but was disappointed when he found out that CTCSS decode was an option.

I have only been a Ham for 1 year so I don't have any experience with the older HTs and the frustrations associated with owning an older rig and seeing all of the cool features come out on the new rigs along with the high price tags. I bought my 51R-HP with the display mike, a Diamond mag mount for the car, the car charger and a low power battery and paid about $700. I just ordered a Kantronics TNC to try some packet, I just hope I get the time to use it when it comes.

Good Luck with your decision.

MG>73 and "Happy New Year"
MG>Morel, 4X1AD

HI MOREL
I HAVE TWO OF THE MFJ 989 C.
MY OTHER EQUIP INCLUDES A FULL POWER AMP.
WITH MY FIRST MFJ 989, I TOOK TOO LONG TUNING UP THE ANTENNA AND THE
AMP (400 WATT RANGE) ; THE COIL FORM OF THE MFJ 989C INSIDE THE INDUCTOR
MELTED DOWN. I'V NOTICED SINCE THAT MY OTHER MFJ 989C HAS EXCESSIVE HEAT
TO THE INDUCTOR FORM IF I TAKE TOO LONG TUNING UP. I SEE FROM THE LATEST
MFJ CATALOG THEY HAVE MFJ 989C WITH "AIR CORE INDUCTOR". THIS MAY HELP
FIX THE PROBLEM. (I CAN'T IMAGINE WHY THEY DONT CALL IT A MFJ 989 "D".

GOOD LUCK TO YOU; BY THE WAY, CLEARLY THE NYE ANTENNA TUNER IS A MUCH
BETTER UNIT, BUT COSTS ABOUT ABOUT THREE TIMES AS MUCH.

I BELIEVE THE MFJ CONSTRUCTION ON THE MFJ 989 C IS OK, AND BETTER THAN
MOST OF THEIR STUFF; EVEN SO, I SEE SOME SHARP EDGES ON THE SHEET METAL
COVERS, ETC.

LET ME KNOW IF OTHER QUESTIONS, OR WHAT YOU EXPERIENCE BECOMES!

Hello.
I've just updated my FTV program, which does FAX & SSTV using a SoundCard, to decode Baudot using the same (FM) demodulation engine.

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can be analysed again at a different keying rate or polarity! Garbage can be resampled on the fly, which means that minutes of received signals decoded at the wrong baud rate or keying polarity are recovered, on the fly, while still receiving.

(2) Keying rate and polarity are analysed automatically - standard baud rates are automatically set following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

(5) I wrote it, and I love it - I myself can't believe it works so well!

Download your copy of FTV from my web site, at:
http://www.geocities.com/SiliconValley/2504

System requirements, and the standard features of FTV are described in the following page:
http://www.geocities.com/SiliconValley/2504/ftv.htm

By the way, AM signals from low orbiting weather satellites are also decoded - no extra interfaces needed. Demodulation mode is user selectable in software.

Hope you all have a load of fun receiving 'words and pictures' - I hope to get some feedback !

Happy New Year 1997
All the best from Brian, 9H1JS, on the Island of Malta.

I have a Yaesu FT-530 which is having some problems with the tone squelch. When I enable tone squelch on some freqs like 146.73 I get either no opening although the tone is present or I get attenuated audio. I'm told that someone has a web page dedicated to the FT-530 and they have listed some adjustments that can be made to the tone squelch. I haven't been able to located the web page and any hints would be greatly appreciated.

Thanks in advance.

**** FOR SALE **** FOR SALE **** FOR SALE **** FOR SALE ****

Hi

I have an MFJ 1278BX Multi-mode controller for private sale, this is
an excellent unit with loads of features as follows :-

1) Modes :

AMTOR, PACTOR, RTTY, PACKET, ACSII, FAX, Colour SSTV, NAVTEX, CW,
Contest memory keyer, Modulated CW, MARS.

ASA - Automatic signal analysis (set the mode type automatically).

2) Mailboxes:

PACKET - 32K RAM expandable to 128/512K
PACTOR - 32K RAM " " "
Forwarding and reverse forwarding to your local BBS. (ie gets mail
from your local BBS and puts it in your TNC mailbox).

3) Baud:

HF PACKET - 300 baud
VHF PACKET - 1200 baud (expandable to 2400 or 9600)
Terminal to TNC baud rates upto 19200 baud (automatic)

4) Other:
Built-in 20 LED tunning indicator, Parallel printer port (on TNC!), 2
radio ports, TTL in/out, RS232 in/out, 2 manuals (very big), PSU.

This TNC has served me very well for about 12 months with no problems
at all and comes complete with the BOX and all MANUALS and LEADS as
original. They are currently selling for £339 at Waters & Stanton.

I would accept £200 'ono' and can post the unit upon receipt of
payment.

Thanks, Steve O'Malley (G7ANV)

Greetings all...

I need a couple large knobs, anywhere between 2 and 2.5 in. diameter. Must be for 1/4" shaft and have a setscrew. Not picky about style. Would like two matching knobs, tho. If anyone has a couple laying around they'd be willing to part with, pls let me know. Or if anyone has a source for them, pls pass it along. I've looked in all my catalogs and other on-line sources without any luck. Lots of little ones but no big ones.

Actually, I'm trying to find the large knobs for a Johnson Matchbox tuner. I'd REALLY like to find a couple for it but will settle for a pair of large generic knobs.

Thanks, 73, & HNY... Mark AA7TA

5813. Modifying HR-2600

Newsgroup: rec.radio.amateur.equipment

Does anyone know about modifying the President HR-2600 for operation on other frequencies?

5814. FS: DRAKE XTALS for all T4* tx and R4* rx

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-29 00:00:00 UTC
From: n3bj@aol.com
Message-ID: <19961229215000.QAA19468@ladder01.news.aol.com>
Source record: 187523

For Sale: Crystals for all Drake R4, R4A, R4B, R4C receivers. Same crystals may be used in the T4X, T4XB, T4XC transmitters. To determine operating frequency desired, subtract 11.1 mhz from the crystal frequency (shown below).

Example: 12.6 minus 11.1 = 1.5 mhz (160M)

Available crystals:

18.6, 12.6, 12.9, 38.6, 26.1, 38.1, 40.6, 22.6, 40.1, 21.1, 25.6, 39.1, 16.0, 24.1, 31.1, 26.1, 25.1, 13.1, 15.6, 39.6, 31.6, 13.6, 20.8, 22.1, 24.6, 23.1, 30.6, 27.1, 15.4

12.6 (160M), 21.1 (30M), 39.1 (10M CW) are $12.00 EA
All others are $9.00 EA

Let me know, they're going fast....

Also have other Drake stuff, including Sherwood filters, PCB board for the filter mods, sheetmetal brackets for the same, PCB for the product detector mod and audio amp mod. Also have rare TL442CN IC for the product detector mod.

Happly Holidays !!

I use the High Sierra. I have had great reports with it and would
recommend it to anyone. Although, if you want the ultimate mobile
antenna and don't mind getting out of the vehicle to change bands, then
go for the BugCatcher.

BTW, Check out my webpage, "N5RV's Mobile HF Home Page"

5820. WinTrak Pro

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-29 00:00:00 UTC
From: "Paul E. Traufler" <wintrak@traveller.com>
Message-ID: <01bbf5e2$1ec71c40$51ae1ace@traveller.com.traveller.com>
Source record: 187529

WinTrak Pro 4.5 Released!

WinTrak Pro Version 4.5 has added and improved many areas in the program. The Rendered views have been improved along with several new views available also. This is just a small list of the many improvements made to the program. Remember this program is a full 32-bit version, do not accept any substitutions! Do not let those other programs fool you with the old, "It works under Win95", but in reality it is a Windows 3.1 16-bit program. Its your money, demand the best!

New Items:

Visible now satellites can be any of the 4 satellite groups.
Satellite elements statistics, such as oldest, newest and average age of elements.
Zoom in on the Render views.
Added plot the next 2 passes option to render views.
Automatic LF to CR-LF text file detection and correction. (UNIX to DOS Text conversion)
Mercator map added to the Rendered maps options.
Added Multi-Satellite 3D and Mercator maps Rendered views.
Added satellite labels to Rendered views.
Added option to set Sun terminator on the Render views.
Added satellite Rise/Set alarms, can play user recorded Wave files or provided Wave files.
Greatly improved help file with printed manual options included in help file.
Lowered the minimum satellite altitude to 90 km from the past 160 km.
This version works with Windows NT 4.0 now also.

WAS considering getting a TENTEC AMP with the 811A in it called the
CENTAUR. I went to the TENTEC REFLECTOR site and saw lots of complants
about constant "ARCING" during tune up. Also gettin aloud thud during
"TURN ON". If this is happaning please get back to me so I also don't
make a mistake. I guess the alternative is to get either the AMERITRON
811A or 811B. My only concern is that Ameritron is ouned by "MFJ".
In the past I have had a lot of trouble with the poor quality-cheap
products of MFJ.I don't want a collins amp since I want 160 meters plus
the WARC bands.

Ray,

Check out your local friendly Radio Shack. I recently saw a couple
clocks in local stores that meet your general requirements, and the
prices didn't seem out of line. I have the MFJ clock you've been looking
for, and can verify that the quality is marginal. It looks neat,
but is a bear to set, and doesn't keep great time. Based on other RS
stuff I've owned, the RS clocks have *got* to be better than the MFJ.

Cheers,

Bob K9CMR

> Thanks in advance.
> Dave K2DH

Dave,

Here's a service buletin from ICOM which might give you some help.

Most Common Failures and Cures for the Icom IC-271A/H

Symptom: "Rushing water" or "aurora" sound in FM receive
audio. SSB sounds raspy and distorted.
Probable Causes: 1) Bad plastic trimmer capacitors on HPL
unit. 2) Old, dried out electrolytic capacitor C2 on HPL
unit is allowing regulator to oscillate.
Cure: Replace faulty trimmers C16 and C78 on HPL unit with
ceramic versions. Replace C2.
Remarks: To allow proper alignment of ceramic trimmers,
reverse values of C16 and C78: Make C16=12pf, and C78=6pf.

Symptom: Frequency instability.
Probable Causes: 1) Bad plastic trimmer capacitors in HPL
unit. 2) Bad solder at IC2 regulator on HPL unit.
Cure: Replace trimmers as stated above. Resolder cracked
joints at regulator.

Symptom: No RX/TX, or no RX/TX when unit warms up. Unit
may have dead spots in tuning range. Inspection reveals

that the HPL loop is unlocked. Trimmer capacitors on HPL unit have already been replaced.
Probable Cause: Bad C9 on HPL unit.
Cure: Replace C9 (1uF, 50-volt) BP capacitor on HPL unit.

Symptom: No frequency display, only decimal points. Problem may be intermittent or temperature related.
Probable Cause: Display DC-DC converter has noisy output.
Cure: Replace all of the following dried-out electrolytic capacitors on the display unit: C3, C6, C7, C8, C9, C10, C11, and C14. (These capacitors are dark to light blue when they are new. Capacitors that have turned gray are old and dried-out.)
Remarks: While servicing the DC-DC converter section, look for cracked solder joints as this section of the radio tends to run hot. Also, we recommend reprogramming the RAM card after servicing the DC-DC section.

Symptom: Erratic display i.e., frequency listed will be out of the normal operating range of the radio. Rotating the VFO knob may cause strange characters to appear in the display. Cycling the power switch a few times may restore operation temporarily.
Possible Causes: 1) Cracked solder on RAM unit is causing logic errors. 2) Program in RAM unit is corrupted. 3) IC21 regulator on logic unit is producing noise or oscillating.
Cure: Replace filter capacitors C11, C26 and C26 on logic unit if they appear overheated or dried out. Resolder cracked joints at J1 and J2 connectors on RAM unit, then reprogram. If this does not help, substitute RAM unit with a known good one. If the substitute RAM unit works properly, then the RAM unit must be replaced. If the substitute RAM unit does not cure the problem, there may be noise from the DC-DC converter causing the logic unit to glitch. Follow instructions for the previous problem.

Symptom: Intermittent RX/TX. May have dead spots in tuning range.
Probable Cause: Bad data to HPL unit.
Cure: Resolder joints at J11on logic unit. Resolder other suspected poor joints on logic unit. If this does not help, there may be a problem with RAM unit or associated circuitry. (See previous listed repair)

Symptom: CPU noise in audio.
Probable Cause: Poor ground on display unit.
Cure: Tighten the three screws that hold down the display unit PCB. If this does not help, install a plastic-coated metal shield over the display unit. (This type of shield is available through our parts department.)

Symptom: Loud, high pitched-squeal emanates from inside radio.
Probable Cause: DC-DC converter transformer has a loose core.
Cure: Replace T1 (TO-9) on the display unit.

Symptom: Very low RX sensitivity.
Probable Cause: Bad Q7 on YGR unit.
Cure: Replace bad Q7 (2SK125).

Symptom: No RX. Investigation reveals that T/R relay (RL1) on filter unit does not release in receive mode.
Probable Cause: Leaky Q39 on main unit.
Cure: Replace leaky Q39 (2SC2785).

Symptom: Drastic change in audio frequency response between USB and LSB., i.e. USB audio has too much bass while LSB audio has too much treble. TX frequency response is also poor.
Probable Cause: Misadjustment of the BFO or a faulty crystal filter.
Cure: Realign the BFO. If this doesn't help, then the problem is most likely a bad FI-1 on the main unit (10M24D4).

Symptom: VFO tuning is erratic. Sometimes frequency doesn't increment steadily when VFO knob is turned.
Probable Cause: Dirty rotary encoder.
Cure: Remove white plastic cover from back of rotary encoder and spray-clean the carbon track with Blue Showers solvent. Spin VFO knob vigorously while spraying.
Remarks: Do not let solvent saturate the display unit or allow it to come into contact with the plastic display lens. Stuff a paper towel between the rotary encoder and display unit to catch spray run-off.

Symptom: In 271H, low TX power output with high current draw from the power supply.
Probable Cause: Bad C28 chip cap on PA unit.
Cure: Replace C28.

Looks like the VCO is FMing on you. Generally the trimmer caps must be
replaced. This 1271 is a finicky radio usually better to ship to ICOM or
Malcom Technical Support at 509-732-8883.

>Buckinghamshire, U.K.

No key strokes, but diode removal. I do not remember which one needs to be removed on the USA version. Also do be aware the CPU may not allow for a wider receive than you already have. Several years ago ICOM started installing CPUs in some versions that had the frequency range locked in the program code. The european versions are that way. Can not say if the 32E is though. I do know W2E needs to have both CPU s replaced for North American frequency coverage.

Ray,

Check out your local friendly Radio Shack. I recently saw a couple
clocks in local RS stores that meet your general requirements, and the
prices didn't seem out of line. I have the MFJ clock you've been looking
for, and can verify that the quality is marginal. It looks neat,
but is a bear to set, and doesn't keep great time. Based on other RS
stuff I've owned, the RS clocks have *got* to be better than the MFJ.

Cheers,

Bob K9CMR

> either the W32A or the FT-51.
>
> Ken, WB7SFO/KL7

I agree , the FT50R is the best dual band HT out
there, don't kid yourself otherwise. The Yaesu
FT50R is outselling all the dual band HT's out
there and there is a good reason.

Super wide band receiver, 76 -999Mhz, Higher IF,
thus images are typically 90Mhz away from desired band,
maker it easier to keep image problems occuring, as I
saw in other HTs.

The water resistant gaset seals to protect internal
circuitry is a real plus in moist environments.

The W32A does not hear as well out of band above
165Mhz, but does exemely well on UHF (400-512).

The FT51R is ok, a little better on VHF out of
band than the W32A.

I use to have a W32A for UHF scanning, a Kenwood
TH79 for VHF.

Since the FT50R came out, I got rid of the TH79AD
and W32A and bouht two, not one FT-50R's!!!!!!!!!!

I like the FT-50R so much , I have two of them, just
in case Yaesu decides to stop making it, or changes
anything with it, I did'nt want to lose any of the
super abilities it has!!!!!

No kidding aside folks, get a FT50R, you will
amazed at the sensitity of this wide band rcvr!!!

I use to have a TH78, thought it was great, droped it
and at that time bought a TH79AD, I wanted to use it

as a wide band scanner on UHF, well they reduced the
receive bandwidth on UHF, well when the FT50R came out,
all the other HT's I had were history!!

Buy it! You might even try to talk them down a few bucks. Believe it
or not, I was able to find the same scanner for $100 also at a pawn
shop. I think they must have mistaken it for an older model since it
was a lower number than they were used to seeing. They don't make this
type of mistake often so if you're lucky enough to catch one, grab it!

Enjoy!

John

Jerry,
Thanks for confirming my suspicion... I am looking at the extra smt

diode that I got from Icom when I did the mod to my IC2SAT back around '93
I believe. Well, got the parts, got the gear, just gotta get the location.
Thanks
again for the pointers.

Source record: 187619
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.space

Having recently discovered FM activity through sattelites, I'd like to try my hand at getting through the FM repeater on the Mir space station. Unfortunately, my UHF rig (a Kenwood TM-401B) only covers 440-450 MHz. Is there a mod available to allow this rig to operate below 440 MHz?
BTW -- the Japanese TM-401 apparently oerated from 430-450 MHz, judging by some of the Japanese WWW pages.

Thanks for any help

> either the W32A or the FT-51.
>
> Ken, WB7SFO/KL7

I just sold my W32A to a friend for $200
and replaced it with the Yaesu FT50R.
The FT50R has a wideband rcvr 76Mhz - 999Mhz
It has a 45Mhz IF with fewer Images than the FT51R
or W32A..
If your into out of band tx capabilitiy , the
FT50R beats both, and the better sensitivity than
the FT51R or W32A for both VHF/UHF.

I like it so much that I have two FT-50R's,
also have a Kenwood TH79AD, but don't recommend
it if you into wide band listening(only 120-173MHZ
and (410-470MHz)

Hope you get the FT-50R!!

Try pressing the 3, B an # keys while turning on the radio. I can tell from experience the W2E does not have the same CPUs as the W2A. This is done to limit possiable frequency expansion as required by many european countries. So the above may not work until you change out the CPus with the North American CPUs.

Source record: 187287

Your collective wisdom please...I'm an avid dxer, especially in the jungle which is 20 mtrs (yes believe it or not I actually enjoy working the pileups on the rare ones), and have been running 500 watts output from a great old amplifier (an Eldico 1000F). I've been debating over whether to upgrade to an amp capable of 1.5 kw and I'm wondering if the 5 db gain I'd get from tripling my power output would really justify the expense and the potential havoc it might wreak in the neighborhood. The figures indicate only 5 db gain (less than an S unit) but what is the real "operating" effect from such a power increase?? I suspect that the real benefit will be more than the figures might indicate. Any thoughts on this?? Please...only diehard HF dxers need respond...nobody else would probably understand trying to squeeze blood from a stone! Thanks. de John, K7JY, Seattle.

Hi All, ALWAYS, ALWAYS get a receipt with name of pawn shop, signature of seller, model, serial number, and amount paid.

The pawn shop may have "loaned" on stolen items. If you are in possession of stolen items the law is not never nice. I have purchased items from pawn shops and have been offered low, low prices but no paperwork. I always get the paperwork.

Happy Holidays, Lawrence

>
Hi Andy !

Yes, I have got one.
If you open the case, you will ask yourself, why you gave away so much
money for it. However it has performed its duty very good so far in my
shak. I use it mainly to tune a 77meter long wire on 160, but all other
band are tunable, too. On fielddays i have used it for balanced line
operation and no problems there either.
The power rating is 3 KW, I only have 1.8 KW. It works up to that power,
more i connot say.
There is a lot of critisism on the tuner in the net. But i have had no
problems whatsoever. I would say buy it.

>Thanks. Mike
Make VERY sure that you have a good rf ground. I oned one of those and had the very same problems. This "feedbacl" is cased by poor microphone shielding and an number of other facors including inadequate power line shielding. You can make a "quiet ground" for this unit by taking any length of rg-8/u cable (long enough to reach the ground stake from your station) and solder a pair of .01 microfarad 1000vdc caps across it (one at each end). connect one end to the radio's ground lug, and the other to the ground stake.

this should help. Also, make sure that your coax line (to the antenna) is properly set up (good connections on both ends, etc).

5896. Re: Kenwood TS-570D

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-30 00:00:00 UTC
From: Rick Lapp <rickl@unix.asb.com>
Message-ID: <E38CID.Duq@nonexistent.com>
Source record: 187335

I've been asked by several on this group to post my 570 review again:

These are my Impressions of the TS-570.
My thanks to Joe, W2HPM who also spent some
time with me reviewing this new Kenwood.

I'm comparing the radio based on others I have owned:
940, 765, 850, Omni6, 450, 50, Delta2, and a 706. I've also
operated the FT-1000 enough to compare it to the others.

The radio was setup by removing all the connectors from the
450 and simply plugging them into the 570. Only the CW jack
changed from a "phone jack to an 1/8" mini which was
quickly fixed with an adapter. The amplifier keying and
PK232 interface all worked exactly as they did on the 450.

The LCD display reminds me most of the IC-728. The numbers
are large and easy to read. The backlight is adjustable via
a menu selection. The meter is a nice compromise between an
analog movement and a bargraph, since the LCD segments are
laid out in a radius, resembling an analog movement. This
is a simultaneous
S meter, power level, SWR, Compression level and ALC. It
looks like the audio level function in the 450 was left out
of the 570 meter. The peak hold function works well. (2
segments remain at the peak level for about .5 secs.)

The front panel is well laid out. It's exactly the same
size as the 450 but MUCH easier to operate. The location of
each of the buttons has been well thought out for operator
convenience or efficient contest operation. The buttons are
rounded rubber, not the squared off plastic and metal ones
on the 450 and 850 and 940. The buttons are divided into
groups depending on function. Each one of these groups has
a different shape and feel - a nice touch for the sightless
or sleepy contest operator who has his eyes on the monitor
and only his left hand on the controls. The buttons work
easily and don't take much effort. This was annoying to me
on the 706, Delta2 and Omni6 which take entirely too much
pressure to make contact. This is an important point for
contestors.

Joe pointed out that a "reminder" LED was missing from
functions like notch (beat canceler and noise blanker)
although the LCD segments for these functions are of good
size and difficult to miss.

The receiver was compared side by side to my 450. Without doing extensive lab tests with a signal generator, it's seems that the receiver is somewhat more sensitive yet quieter from phase noise. I didn't seem to need the pre-amp in situations where I needed it with the 450. The Noise Blanker seemed effective to pulsing noise and compared to the 450, did not cause the usual distortion on strong signals or strong adjacent signals.

IF shift control works well and I'm please to see it with a center detent, like the 450. I tend to leave mine a few degrees off center which seems to emphasize the lows of a SSB signal, making the signal sound "full".

The memory channel selector knob doubles as a menu selection control. The following functions are not controlled by the menus but can be individually controlled with this "multi" knob: mic gain, pwr level, keyer speed, vox/break-in delay, and bandwidth selector.

The menu function is extensive, yet fairly easy to use. It is similar to the 450 and 850 but has an alpha numeric scrolling display describing the function so you don't need to constantly refer to the manual. We were able to set and control most of the menu driven functions for the first time without referring to the manual.

The DSP function is in both the transmit and receive audio circuits, not in the IF like some of the other radios currently on the market. There are advantages and disadvantages to both techniques and Kenwood has chosen to put it in the AF. I think this was good choice, although I haven't compared it to an IF DSP radio. The complaints I've heard about transmit and receive audio distortion in the 870, appear to be non existent in the 570. Both transmit and receive audio are clean and non-distorted. Even with the DSP beat canceler or DSP Noise Reducer functions on, receive audio is still clean, although it is possible to hear a hint that the audio is being "processed". There is no comparison though to the distortion introduced in the audio through the low end Radio Shack DSP unit. There are two NR selections. NR1 and NR2. One is used normally for SSB and the other for CW. These tend to reduce background "hiss" and is a separate function from the Beat Cancel which works well on SSB. Kenwood could have had the NR1 and NR2 functions automatically selected depending on mode selected, SSB or CW. I don't know why they didn't do this. I'm mostly a CW operator and the NR2 works well but may not be that pleasing to listen to while copying CW at over 40 WPM. There is just a hint of rising edge distortion as the DSP does it's work. What is impressive however, is the "hiss" reduction with the NR function enabled. The receiver is

almost completely quiet except for the desired signal. It would be interesting to compare this DSP with one of the high end external DSP units. The Beat canceler does a fine job of eliminating heterodynes on SSB and does not add any objectionable distortion to the received audio.

The CW tuning is cute, but I'm not sure how often I'd use it. Perhaps new operators or contestors would find more use for it than I would. I suppose my ear has enough training and experience where I don't see that it's necessary. It is not as precise as I thought it would be as it usually comes within 10 or 20 Hz of the correct frequency depending on signal strength, QRM or keying speed.

I installed the 8Mhz, 500Hz CW filter in my radio. It appears that there is only one spot for this additional filter - I would not be able to install a 1.8Khz filter with my CW filter installed. I don't see this as a problem since a combination of the DSP slope tuning and the IF shift does an adequate job.

On CW, the IF filtering works well. There is a filter bandwidth control that controls the DSP AF bandwidth. The DSP bandwidth is variable from 2.0Khz to 1.0Khz, 600 Hz, 400, 300, 200,100 and 50 Hz! The resulting combination of 500 Hz IF filter and DSP AF filtering reminds me of the Jones Filter arrangement that Ten-Tec put in their Delta2 transceiver which was continuously variable from wide down to less than 100 Hz. I found it difficult to find a crowded portion of the band where the 570's IF and DSP AF filtering could not effectively knock out adjacent interference. Compared to my 450 which had both 8Mhz and 455Khz, 500Hz CW filters, the 570 seemed to be cleaner with less "ringing" while copying CW at narrow filter settings.

The automatic antenna tuner seems to do a good job of matching the radio on any band to my 80 meter dipole fed with ladder line through a 4:1 balun, although the 450 never had a problem either. The "AT Tune" function is different than on the 850 and 450. Kenwood saved the "Auto/Thru" button and put both functions on one button. Depressing the "AT Tune" button toggles the tuner on or off. Holding it down for longer than a second, starts the tuning cycle. The tuner sounds much different than previous Kenwoods. Rather than hearing the whirring of a motor, it sounds more like a relay chattering. It took some getting used to. I'm curious what they did different with the tuner that makes it sound like this. The tuner, like previous radios, memorizes settings for each band.

On Pactor, Amtor and RTTY, the radio performed well. The variable bandwidth of the DSP filter is a nice feature when

operating on the digital modes to knock out any adjacent frequency QRM. On transmit, I was able to operate at 100 Watts key down on long FEC and Baudot transmissions with no temperature excessive rise. The radio seems to handle this 100% duty cycle operation. A nice feature for the digital modes are menu selections to vary BOTH the audio input and output from and to the TNC.

On CW, the 570, in my opinion, is the best Kenwood yet that I've operated. My criteria for CW operation is mainly how smooth the transmit to receive transition is, how smooth the sidetone sounds and any audible noise or clicks from either the speaker or relays while on QSK or semi-QSK. The amplifier keying relay is easily enabled or disabled via a menu selection and with this relay disabled, the radio is very smooth and quiet in QSK. During QSK, you have to strain to hear a small, perhaps reed relay. I heard very little, to no difference in another receiver while switching between semi-QSK and full break in while sending a string of dits at 50+ WPM. This is a test that Joe and I usually run to see how good the QSK operation is and essentially duplicates the CW dual trace scope photo you see in the QST rig reviews. On QSK, I would rate the 570 second only to the Ten-Tec Omni 6 for silky smooth QSK operation and nice sounding CW on receive.

Although the AF output stages are spec'd at 1.5 Watts for the 450 and 570, the 570 seemed to have somewhat less audio drive into my external speaker than the 450. It's not a problem since I never seem to run the audio gain up less than 10 or 11 o'clock . The audio quality on SSB and AM was clean and comparable to the 450.

We ran a number of transmit audio tests on 75 meter LSB. Using a Radio Shack Highball mic, the consensus was that "High Boost" transmit audio equalization, and the mic gain at 40, seemed to work best. A half dozen critical ears on the frequency preferred the 570 over the 450 for transmit audio quality.

I'd be interested to hear from other 570 users and will try to answer question from others who may be interested.

5897. Help>Ten-Tec Argosy>Non- QSK problem

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-30 00:00:00 UTC
From: "Dennis F. Terribile" <terri001@mc.duke.org>
Message-ID: <32C7D8B2.4DDC@mc.duke.org>
Source record: 187336

Hi,
Recently bought a Argosy(non-digital) and it does not have QSK. It came loaded with all the accessories and mods. At first I thought the 'relay' accessory for using a linear was the culprit..so disconnected it. Nope. Now I'm thinking its the mods that were done. Has anyone found that doing the AGC mod disables QSK?? The reason I buy Tec-Tec is for QSK. No-one comes close. Before I ship it to TT..maybe someone has the answer?
Thanks for reading..
73 & Happy New Year!

The way the Pawn business works is items are held as loan collateral for
a minimun of 3 months and if the loan is not repayed the collateral
becomes the property of the pawn shop to sell. So the pawn owner would
most likely know what is coming out of pawn each week..... Just FYI

5900. Re: Upgrading my AEA PK-900

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-30 00:00:00 UTC
From: Bob Smith <rsmith@internetmci.com>
Message-ID: <01bbf667$893a8a00$60edbdcc@rsmith>
Source record: 187339

I used my PK900 with the TAPR DSP93 for 1 year with no problems at all. The header seems to confirm nicely.

I did toy with hooking up a MFJ 9600 bd modem (really nice, actually made by PACCOMM to the G3RUH standard and licensed - the AEA is not I think- about the best you can buy).

The problem is that the header is oriented opposite of the board so you will need to make a ribbon connector to reverse it.

This combination would make a super setup - switchless between 9600 and 1200 - something others can't claim.

Another idea would be to call AEA or HRO - they may have it in stock at any of their locations.

The AEA is cheaper abt $75 I think vs. $109 for the MFJ but the MFJ or PACCOMM would give the best performance for sure.

>should do to upgrade the PK-900?
>
>Jim W8ZR

Hi Jim,

The PK-900 does have a TAPR Modem Disconnect Header on the main board. Look for it about a third of the way across from the left side and near the middle of the PC board. That would be one way to add a 9600 bps modem. The 9600 board that AEA offered for the PK-900 is not too complicated, but I can't remember if the manual included a schematic - probably not. So - either wait to see who surfaces to continue handling AEA's data products line, or add one of the several 9600 bps modem kits that are available using the modem disconnect header.

As a 'supporting' note, when I was with AEA, I looked over the modem disconnect header circuitry as closely as I could, and it seemed to conform to the TAPR implementation. But that was done on a 'time available' basis, between customer service phone calls, etc. I did

not have an opportunity to connect any of the common modems to the connector to verify function.

Good luck in your quest, and 73

Bob, KD7NM

I would like to hear from others that have the FT1000/FT1000D radios about the sluggishness of the s-meter.

If possible, pls email data gathered from ur radio by use of the MARK generator at a 10kHz increment; for example, what does the s-meter show when tuned to 7100kHz with FRONT END at NOR and selected CW mode with 2.4K BANDWIDTH for the main receiver. This data is for my comparison with what I am getting here.

Is it normal to get an s5 reading from MARK gen signal at 7100kHz with NOR es CW and 2.4K BANDWIDTH ???

Thanks and a Happy 1997 New Year to all.

Hi,

I've been using a PK-232 for a while now and I would like to upgrade to a newer DSP based TNC. I'm mostly interested in HF weak signal work. I good CW recovery is important. I was wondering what people here would recommend. I like the spec of the SCS PT-II, but it is very expensive. Too bad AEA is screwed up because the DSP-232 looks good.

Thanks,
Kory

Ray, look for one of the old Heathkit digital alarms with the 1" gas-discharge tubes. They do 12/24 hours with a jumper setting. Mine's still ok after 20 years or so. No you can't have it :) but they do show up at hamfests. It's got a smoked plexi face and genuine simulated walnut (tm) trim.

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-30 00:00:00 UTC
From: Nutcracker <colin@willacy.enta.net>
Message-ID: <01bbf68e$b8245b80$9724cfc2@colin.entanet>
Source record: 187358

Hi All
I've got some gear to swap, sorry if this message is a bit blunt & to the point but this is the fourth time i've typed this out, every time i come to send my bloody pc crashes

got:- trio 201A 2 m mobile & all accesories
icom ic2sat portable & battery packs
baycom in a box unit
hamcomm in a box unit (fax\sstv\rtty)
cables & software for data units (wired for trio)
All above i will swap for :- good scanner, synthesizer/keyboard (not Casio or Yamaha PSS/PSR range) drum machine, studio equipment
injet or laser printer, i regard the equipment to be worth at least 150-175 uk pounds so reasonable offers only please, especially need synthesizers so they will receive preference over other offers, but offer anything anyway, you never know!
Also for sale:- log periodic antenna, covers 100-1000mhz, cost over 250 pounds 18 months ago, good condition, offers around 100 pounds
All offers or enquiries to Colin@willacy.enta.net
Location Telford England, UK RESIDENTS ONLY NEED APPLY
.

When you compare the SCS PTC-II to less expensive units, take a close
look at the hardware you are getting (processor and DSP chip
power/speed). I don't believe the DSP-232 has near the capability of the
PTC-II (even if AEA was still in business).

>
> Bob.... KN6GA
I had the MFJ -989C with the regular roller inductor. The unit is a
piece of "CRAP" . The roller inductor fell apart while tuning it. Also
the metering was way off "out of the box". The digital counter was
"junk"! I had a MFJ 949E 300 watt tuner that seemed Ok. DEFINETELY
GET THE TUCKER OR VECTRONICS TUNER!!! Also, the Roller inductor caught
on fire while running 1300 watts into a center fed zep on 80 meters.
Luckily I had a fire extinguisher handy!

> Bob K7IQ

Bob,
I guess we both stand to be corrected, it is 110 memories,
not 112 which I claimed or 100 uou claimed. I use the AMDS1c
software and memories 1 to 100 plus Ux, Lx, (5 channels) for
a total of 110 can se t set for scanning. In the lower right
menu under each freq, use can assing it for scanning, or to
not to scan.

Now the Box says 112channels, but I can only scan 110channels,
I think that enough channels.
I bought two FT50R' so I guess I have 220 channels, as long
as I hold one in my right hand and the other the left hand.

Hum!! may have a difficult time to remember all those channels!!

5954. FAQ: Plectron and Motorola Alert Monitor Receivers

Newsgroup: rec.radio.amateur.equipment

Add a Plectron or Motorola Alert
Crystal Controlled Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. Although UHF versions were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

Still have my laptop available, willing to trade for the following stuff.....
The Laptop: A Compaq Contura 486 SX25 200 mb hd, 4mb RAM built in modem, plasma(?) screen (I am really not a computer know it all.....) Its not color but but gives a good picture....In great shape otherwise, with a new battery, accessories.

What I am looking for:
Pro 2006's
FT50/40/10/51
Dual band mobiles
cash
Looking to get around 550 for the computer, so will take about that in trade, both sides pay their own shipping or if you live in the Mass area we can meet.....Scannaman@AOL

>should do to upgrade the PK-900?
>
>Jim W8ZR

Hi Jim,

The PK-900 does have a TAPR Modem Disconnect Header on the main board. Look for it about a third of the way across from the left side and near the middle of the PC board. That would be one way to add a 9600 bps modem. The 9600 board that AEA offered for the PK-900 is not too complicated, but I can't remember if the manual included a schematic - probably not. So - either wait to see who surfaces to continue handling AEA's data products line, or add one of the several 9600 bps modem kits that are available using the modem disconnect header.

As a 'supporting' note, when I was with AEA, I looked over the modem disconnect header circuitry as closely as I could, and it seemed to conform to the TAPR implementation. But that was done on a 'time available' basis, between customer service phone calls, etc. I did not have an opportunity to connect any of the common modems to the connector to verify function.

Good luck in your quest, and 73

Bob, KD7NM

5974. Opinions wanted - Standard C-228A/C-528A

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-30 00:00:00 UTC
From: joec1101@ix.netcom.com
Message-ID: <32c76212.19071201@nntp.ix.netcom.com>
Source record: 187474

Anyone have any experience with either of these radios? I am considering buying the C-228A (2M/1.25M). I have been told they are excellent quality from retailers, but I would like some feedback from actual users. They seem to be a bit pricey compared to ICOM/Yaesu, but if they are durable/reliable, I am willing to spend the extra cash.

Thanks in advance for any replies.

> similar the ICOM 781 . Anyone know the differance?

Rigs for the JA market are often labeled with different nomenclature from the non-JA (export) market. Icom is about the only one who uses a different numbering scheme. Most others use a suffix to the model number i.e. Sort of like Kenwood adding an A for America, E for Europe etc. No difference usually, except the final PA in some cases due to the licensing structure of JA ham tickets. I think I recall sending you a note about that about a month or two ago.

For example, JA now has a 20watt, 50watt, 100watt, and 500watt station license. Generally, the rigs are available either in the 20 watt, 50 watt, or 100watt variety.....the PA's are "modular" and can be upgraded as the beginner upgrades his/her station license.

In the past (before last year) the licensing was 10 watt, 25watt 50watt, 100watt and 500watt. Most HF rigs came in 3 "JA MODELS", either a 10 watt, a 25 watt, or a 100 watt model. This is why there were several supposedly "QRP Rigs" available with same features as full power rigs. Kenwood was well know for doing this (TS-130S and TS-130V among others).

By the way....
For the real "scoop" on new products, you should consider subscribing to several JA ham magazines. (CQ Ham Radio is one of the best). I did when I was working/living in Japan and have continued to receive the magazines for the past 5 years. I enjoy it immensely. Usually, ads for the new rigs appear in the local magazines 2 to 3 months before hitting the pages of QST or the Web or the other US/European ham magazines. Reading japanese helps, but, you can look at the pictures
and specs and still get lots of information.

Have fun,
Joe

> improvements it would have.

No...it is not an improved ICOM 775DSP. It is the same...just a
nomenclature change for the JA market. This rig is and has been
available in Japan since early 1995; I saw them in Akihabara all
the time.

5979. ADMS-1c ... Euro Mode???

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-30 00:00:00 UTC
From: bone@accessnv.com
Message-ID: <5a845r$7c6@usenet78.supernews.com>
Source record: 187479

I received the ADMS-1c software version 1.05 for christmas, and while
messing with it, I seemed to have gotton myself into EURO mode.
I have limited TX range (2M 144-146 mhz).
ADMS won't take my original template (does it think it's for a
different radio, say one sold in Europe?), but does take templates
saved AFTER my mishap.
Is there a way to get full TX capabilities (ala stock USA) back?
My radio has NOT had hardware mods and I do not wish to do them.

Thanks in advance.......

I have available four GE JAN-211 tubes in their original U.S. Army/Navy cartons. I believe these tubes were used in WWII era transmitters. They are about 7.5" long by 1.75" diameter with four pins set in a metal base. If interested please send email to mszabo@cybergate.net. Thanks.

>

The dealer who says 'I might have some next week', is really saying 'I
don't have any scanners and I need to get some.' Pawn dealers often
buy/sell/trade among themselves to balance their inventories.

5983. Re: What is a birdy?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-31 00:00:00 UTC
From: Michael Aust <maust21401@earthlink.net>
Message-ID: <32C8F40E.7623@earthlink.net>
Source record: 187291

A birdy is belong in the order of strigiformes, which
evolved thru DNA hybridization back to the Cretaceous
Period, eighty million years ago. Some birdies were first
observed in the Quaternay Period along with the presence
of man.
As time progressed thru Tertiary Period, these birdies
were tytonids and strigids which expanded into Bubo, Otus,
Strix forms of this creature.
As man entered into the new age, late 19th century, past the Eocene
Epoch period, he noticed that evolution of these species took on a new
look. Instead of feathers, These creatures were were form thru
DNA chains into polycarbonate creatures with tails know as
ducks. We had these creatures with Big Ducks, little ducks,
etc. Funny how evolution did not give them feathers. But alas,
these wisdom creators had the MIL-SPEC-APPROVED to be as robust as the
fine feathered friends.
Man, in is infinite wisdom, was not perfect, and thru mutation
of this tribe of Ogygoptynx , found that the Local Oscillator
would harmonics or offset mixes would beat with other incoming signals
and provide a beat note, and products to fall within the desired
passband of this polycarbonate duck and become a birdie.

I hope this explains it all to you.

>one, please contact me. I have also all the plans.
I am sorry I don't know what a 545B is, but I have repaired type D83 in
the past.

I advise the first thing you do is verify that all the power supply
voltages are correct, but take care as there will be some dangerously
high supply rails.

If all is well then you may proceed to diagnose the time base unit (I
assume that it will be a removable module). The time base unit may
have an indicator lamp (Neon) that will flash with each sweep, reduce
time base to a slow sweep and see if there is any indication.

To diagnose what is going on you could do with another scope, or may be
your scope has more than one time base unit and means another channel
could be used for that purpose.

If the time base is not running then check any additional supply
regulation that may exist with the time base unit. If you have the
service manual it will have many test points with voltages that should
be checked and may even have a diagnotic flow chart.

If the time base is running then you could assume a problem with the
drive to the X plates on the tube. Your scope may have an external Z
socket, intended to drive the X axes without the use of the time base
(You may need to select it). You could try feeding a suitable voltage
to it, to see if you get any deflection.

Have a general look around for any components that have got/damaged
broken/burnt out wires or PCB tracks, it is worth a try.

Difficult to comment any further without reference to service manual or
circuit diagrams.

I don't know if this was any use, but I tried.

If you need more help you could Email me.

Best of luck.

Beware of the MFJ-114. I am about to return my 4th unit to MFJ. The first two lost more than a minute a week. The third blew two LEDs and the 4th just lost a LED. This is beginning to cost money in terms of shipping the bad units back to MFJ. I will say this about MFJ, they don't question me and the turnaround is QUICK. Once it was less than a week.

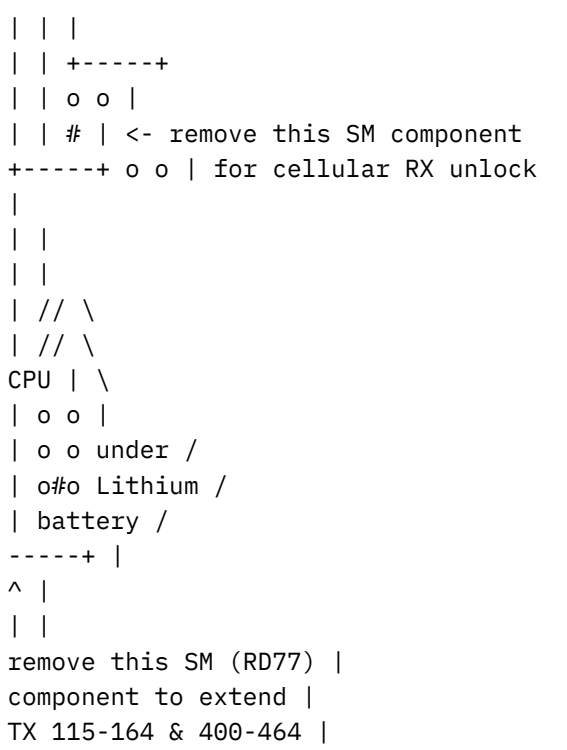
Source record: 187302

Here's the mods.....

Subject: Standard C508A mods

top right-hand corner



The following procedure involves removing the lithium battery which saves your memory channels. Note any memory channels you wish to save -- you will have to re-enter them. Also note the placement of the battery before you remove it, since you don't want to put it back in the wrong way.

Remove the 4 screws from the back of the radio and separate the front and back pieces. Be careful not to damage the flexible cable connecting the two. Unsolder and remove the lithium battery, being careful not to short-circuit it. Remove the surface mount chip resistor RD77, at the fifth pin of the CPU chip, counting up from the bottom. Two component pads above it are already empty. To permit RX of cellular, also remove the surface mount component depicted in the diagram above, way in the upper right-hand corner. Resolder the lithium battery back into place, noting

that the polarity is correct. Press the reset switch,
and reattach the two halves of the radio. Place the
batteries back in and power on.

From scottw@atlcom.net Mon Sep 30 14:48 MST 1996
Subject: Revision of modification to model C-508A

Seperate radio halves, DO NOT desolder lithium battery, use wood carving
razor to remove SM. Razor must be long, sharp and thin at which point
you can get up under the SM and pop off. Remove SM's and press reset
button, reattach two halves. Place batteries back in and power on.

Did this mod on my 508 and it worked fine. BE CAREFUL!!! Its smaaaaall in
there!
Martin, N3HRT.

Kenwood TH79 Dual Bander Modification and Feature Guide r1.5 9/13/94
==========
Clayton Wagar, KD4IDN
920 West Crawford Street #7
Dalton, GA 30720

Here is a compiled list of modifications and features I've found for the
Kenwood TH79 Dual Band HT.

Thanks to the following for their contributions to this document:
Mike Musick, N0QBF
Cole Cunningham, AA7RD
Duane Voth, KC5BGV
Chuck Scott, N8DNX

Having had many other radios in the past, and certain to have many in
the future, I understand the anticipation of Amateur Radio operators to
find modifications to their equipment. I started this document because I
want to see _quality_ information circulated as quickly as possible, in
order to save a lot of time and effort for others.

If you have any other comments, mods, or information you would like to see
included in this document in the future, please send them to:
Clayton Wagar KD4IDN
yensid1@aol.com

Outstanding questions at the time this document was released:

* Rumor of a keypad modification to the radio for "Wide band" TX, RX. If
you
know of this mod, please write to me, even if you wish it not to be
published. This would save a number of poor radios from useless torture!

Hope you find all of this information useful. Again, please send
corrections
or additions to yensid1@aol.com

++
I. Disclaimer
++

Well, don't you get sick of this stuff? I know, I know. However, I must say that I cannot and will not be responsible for anything that might happen to your radio, your person, your dog, or other operators you might talk to with your th79. In addition, if you decide that, with your newly modified HT, you just absolutely must cause unlawful interference with another ham or another radio service, I won't pay your NAL. Really.

Oh, and while we're at it... The extended RX/TX modifications may require you to solder or desolder really, really small components. If you want to know how small, look at the tip of an average ball point pen. Smaller than that. It takes about 1/2 of a second to wipe out several components as well as fry the board inside the 79. Please be careful.

++
II. TH79 Description and Impressions, by Mike Musick, N0QBF
++

Lulled by the sexy small size, I succumbed (or, rather, the credit card succumbed) and bought a Kenwood TH-79 dual-band H-T recently. Already owning a TH-78, the comparison comes easy.

SPECS. The TH-79A is a U.S.-spec dual-band transceiver, featuring coverage from 144-148 and 438-450 MHz. Receive coverage is extended on the 2M side from 118 to 174 MHz with AM in the aircraft band; there is no extended UHF coverage without modification. Max power is rated 5W on VHF and 3.5W on UHF with a 12V source; max power with stock 600 mAH nicad pack is 2.5/2.0. There are three power levels for each band - high, low, and extra-low (30mW). There are 80 memory channels, with no evident expansion capability. U.S./Canada version comes with the CTCSS encode/decode option. Going price at a 7/17/94 hamfest was $480.

GENERAL IMPRESSIONS. Tiny, tiny, tiny. Imagine putting a small duckie on the ARRL Repeater Directory - except that the 79 is narrower by about an inch. With the standard battery and not counting the belt clip, the dimensions are roughly 2" wide, 5" tall, and 1" thick. The belt clip adds 3/8" to the thickness; I left it off so it would be pocketable, and, frankly, it fits moderately comfortably in my work slacks' front pockets, which

was surprising. It's tiny! (Oh, I said that already.)

The 79's keyboard has larger buttons than it's predecessor (lacks the cover, too) which are much easier to use. Control layout in general is better and even in just a couple of days I appreciated the change. No more ambiguous power switch - it's in the primary band volume knob in a normal OFF/ON/VOL setup. Secondary band volume control is on the "ring" of the freq/channel encoder knob in a coaxial arrangement.

There are no squelch knobs; it a key+knob function for both bands. Squelch control was, well, interesting. There are only six "settings", with usually only the lowest setting opening the squelch under no signal. Reading between the lines in the manual, apparently the squelch circuit is semi-automatic. I expected some limitations, but had no complaints under actual use - it worked well.

With my expected habit of putting it in my pocket, I like the control lock switch - it's *not* an F-key function, but, rather is a slide switch next to the PTT. No more fumbling around to unlock it. Unfortunately, the lock function does not lock PTT - that has to be disabled with the "Tx Stop" menu setting. I found this out the hard way by putting it in my pocket and inadvertently keying-up a repeater.

The 79 has an alphanumeric display capability of two lines of 10 characters, which is used in several ways. First, there is a "guide" facility, which provides online instruction for most operation features with a scrolling display. Then there is a "menu" function, which provides access to the settings which were normally done with obscure F-key commands in the 78. Setting the various functions is very clear this way. There is also a status review mode, where the more important settings are displayed.

Finally, the alphanumeric display can be set for each programmed channel. Seven characters positions are available, and almost the entire extended ANSI character set - that's right: lower case, symbols, and accented characters - can be used. However, alpha display is mutually exclusive with frequency display. Frequency display mode can be selected in case you forgot what was "underneath" your programmed channel ID.

++
III. MARS/CAP Modification provided by Mike Musick, N0QBF
++

Here is the MARS/CAP modification for the new Kenwood TH-79A dual-band HT. Usual disclaimers about doing mods apply.

1. Remove battery.

2. Open case by first removing 3 screws (#00 Phillips) on back
and 1 screw on side hidden underneath the rubber flap covering
the DC power jack. Gently pry apart starting at top; BNC
connector will move with back, knobs with front.

3. Spread unit out. Wires will "hinge" on the side with the PTT
button.

4. Looking on the back of the keypad (front) half, locate green
wire on upper left, just below the CTCSS decoder module.

5. Neatly cut this green wire, and tuck back in so ends won't
touch each other or other components.

6. Reassemble.

Programmed memory will be lost since the CPU will notice the
strap change and reset itself.

End result -

Before: VHF RX - 118.000-173.995 TX - 144.000-147.995
UHF RX - 438.000-449.995 TX - 438.000-449.995

After: VHF RX - 118.000-173.995 TX - 142.000-151.995
UHF RX - 420.000-449.995 TX - 420.000-449.995

Automatic repeater offset and shift selections remain normal.

And this tip comes from Duane Voth, KC5BGV...

"The MARS/CAP mod can be made without opening the entire case up. You
can fairly easily cut the green wire by simply (and carefully) removing
the CTCSS decoder cover and using a small pair of diagonal wire cutters."

++
IV. "Wide Band" Modification, provided by Cole Cunningham, AA7RD
++

Following is a modification for the Kenwood TH-79A Dual Band HT which
opens it up to tuning from 67-174 MHz and 400-511 MHz. Actual receive was
85-135.995 AM and 136-179.995 FM with reasonable (0.5 microvolt
or better) sensitivity at all the points I measured. Transmit was
136-179.995 and 400-511 with power dropping off at the ends but still
usable (about 0.5w on the high scale at the band edges).

As usual, I take no responsibility for the mods, or your use of the unit
after mod. Please exercise good judgement and don't endanger our ham bands
with your irresponsible actions.

The observations noted are all I tried and I have no further data.
This is such a delicate operation that one shot was all I wanted to do,
and when it worked I quit!!!

WARNING-CAUTION-LOOKOUT-ETC!!!
The diodes to be moved are microscopic!! About 1mm long by 0.5mm wide.

This mod should be done by professionals on a closed track only.
Children, do not attempt this at home. Requires extremely small soldering
tools and MUCH skill. I had a professional surface mount facility do
mine...

1. Open the unit by removing three screws from the back and one under the
DC power input cover. Carefully separate the front and back pieces.
The two case halves may be disconnected by pulling the wired plug and by
prying the brown latch on the ribbon cable connector up enough to
release it.

2. On the front PC board in the lower right corner as viewed from the rear
with the knobs pointing up there are seven spots for diodes in a row,
with one diode missing.

```
|
o o o o x o o |
_______________|
2 3 4 5 6 7 8
```

The numbers are D302-D308, left to right, with D306 missing.

3. Remove D304, and D307. Put them away in a safe place (Just in case...)_

4. You should now have:

```
|
o o x o x x o |
_______________|
2 3 4 5 6 7 8
```

5. Reassemble and good Luck.

Enjoy, but don't create problems with the new capability...Wouldn't it be
nice if Kenwood would make a RX only mod with these capabilities and we
wouldn't have to worry about accidental transmissions where we shouldn't
be transmitting. I, for one, don't want or need to TX, just RX...

73, Cole, AA7RD
August 11, 1994

(Note - This mod also adds 2 more menu settings. One of which is an
AM/FM demod selector for the 300-400 Mhz band. To access this
band, select the VHF band, press F, then press the Low/Hi key.
Repeat to return to 144 Mhz. The AM/FM selector will allow you
to listen to Military transmissions in the 300Mhz band in
either AM or FM.
- Clayton)

++
V. Remote Base Operation with Kenwood 732/733
++

Kenwood has now simplified remote base operation of their mobile rigs
with the TH79.

I will not give a step by step on how to control the mobile rigs, since they are different. Hoewever, to really understand this feature, I would first get to know the remote control feature on the mobile very well. This makes the following explanation a little clearer!

To access this feature, hold [PTT] and [MR] while [POWER ON].

The display will indicate -RC-, which I presume means 'Remote Control'.

If you have correctly matched your DTSS codes, frequencies, etc, the dual bander's keypad now becomes a function pad. Pressing certain keys enables or disables functions on the mobile rig by sending the DTMF sequences for you.

Please note that all this fuction does is send the DTMF tones over the air to control your mobile rig. I have not made a list of what each key does, but as the 79 sends the DTMF tones, the display will indicate the function. (i.e. - RPT ON, RPT OFF, TONE ON, TONE OFF, etc.)

73 de Clayton
KD4IDN

And this from Chuck Scott, N8DNX...

"The "RC" function is configured to directly control radios such as the TM-732. In fact, if you look at the layout of the microphone remote commands for the 732 it very closely matches the key assignments for of the "RC" mode. Since I have a TM-732 installed in my car, I had a chance to try this out and it's VERY convenient. Everything from direct frequency entry with the "F" key to enabling X-Band repeat. I'm really surprised they aren't marketing this feature of the radio."

++
VI. Post Modification Spec Sheet, by Clayton Wagar, KD4IDN
++

Here is a small chart showing the measured specifictions of TH79 S/N 60300272 after modification. The measurements were made with an IFR 1200S Service Monitor, on the bench, with a 6V power supply. Your milage may vary - these are just what happened with mine, and I would suspect that most units are pretty similar.

++
VII. Cross Band Repeat, from Chuck Scott, N8DNX
++

The TH-79 does go into X-Band repeat. Press the "F" key then the "MONI"
key to enter repeat mode. Use the same to return to normal. There is a
10 min transmit limit so it's not useable for long duration monitoring of
a continuous transmission. That's understandable in light of the number
of horror stories I've heard of people frying their HT's in repeat mode.

++
VIII. Other Observations, Ramblings, Etc.

++

From Chuck Scott, N8DNX....

"Regarding the lack of a memory Lock Out function, I talked at length
with the Kenwood people. They have been inundated calls about this and
have told me that they are preasuring Japan to come up with a processor
replacement to fix this, perhaps as a retrofit. I encourage any owner of
a TH-79 to write to Kenwood insisting on such a modification at no cost
and asking that they be informed when it is available. I think this is
justified for several reasons. First, I have been told by another ham
that the official brochure indicates that such a feature is included.
Second, and more important, it is arguable that the radio is not suited
to the application without memory lockout. After all, it's an 80 channel
radio. To make effective use of that many channels REQUIRES a channel
lockout function. Without effective use of that many channels, the radio
is not comparable to the current standard for such a unit.

BTW, close inspection of the RF deck in my radio shows no obvious
missing parts. I didn't remove the board to check the other side, but
my suspicion is that the 800 MHz parts are installed. I'd be interested
in input from others on that. So far I've not discovered how to make it
display any 800 MHz frequencies though."

Hi all,
Is it possible to modify the Kenwood 850 so that the internal tuner
is also active on receive? I note that the 870 allows this but I've
never seen a mod to allow it on the 850.
Thanks & Happy New Year.

Ian,

You can do it one of two ways, buy a CHIPSWITCH replacement cpu or, replace the crystal in the radio...

I highly recommend the CHIPSWITCH cpu. It adds alot of capability to that little radio. the crystal swap works... but
the freq readout does not follow the actual freq and you'll lose some of the freqs you had to begin with.

I have an FNB-42 battery and it is just like the FNB-41,
except it is about twice as thick as the FNB-41, no belt
clip, and if you get one, there is no case Yaesu has out
for it that has an external clip.

I will say, that it does last a long time, before
discharging, but I think having two FNB-41's and being
able to have a beltclip, and a protective case
warrants two of the 600mA batteries, as opposed to
the 1100mA battery.
I guess if you do a lot of transmittting , the
FNB-42 is ok. I found a leather case that holds
the FT50 with FNB-42(like the pouch product) in
a camera store, but I can not see the keyboard.
Usually I perfer having a fresh battery, along
one on the radio, and cycle between the two.
With an FNB42 and FNB41, you have to leave the
FNB-42 on a long time before it goes down.
You have to fully discharge these Ni-CADS so
you get a memory effect.
One Plus of the FNB-42, if you going out for
few days, use radio alot, the FNB-42 has less
trips to the battery charger.
If you get the FNB-42, be sure to get the quick
charger, it takes something like 24-28 hours to
rechage that big battery, were as it 12-15 with the
600mA battery.
I wish Yaesu came ou with a case with a belt clip
for the FNB42 to fit the FT50R.
Anyway, the FNB-42 does work for me, but I have to
put it in a pouch.

Hi

Is it possible to use the IC-706 as a second receiver on another ICOM radio ? In other words to mimic the dual receiver function of the IC-781 :-)

If the '706 has a mute input it should be possible. I don't own one but is looking at the possibilities to upgrade to IC-781 status :-)

> but i can't find any info on them, is there an
> 'online tube manual' anywhere on the net ???
> any info appreciated....
> 73,

Ron,
The 6293 is essentially a 6146 intended for "pulse-modulator" (i.e.
radar) service.
As per RCA in 4-63, Typical operation is:
DC Plate Supply Voltage 3000 Volts (!)
DC Grid-No.2 Supply Voltage 300 Volts
DC Grid-No.1 Supply Voltage -175 Volts
Peak Positive Grid-No.1 Voltage 65 Volts
Plate Current:
Peak 1.5 Amp (!)
Average 0.015 Amp
DC Grid-No.2 Current 0.004 Amp
DC Grid-No.1 Current 0.0025 Amp
Load Resistance, 100 watts 1500 Ohms

Naturally, these ratings apply to a very short duty cycle. Pin
connections, and filament voltage appear to be identical to a 6146.

73 - Steve KA4RSZ

6008. Icom 706 information requested

I just bought an Icom 706. I have seen the "yellow-wire" mod,
and I have also seen the removal of capacitors in the VHF high-band
filter to improve the receiver sensitivity in the VHF high-band,
outside of the 2 meter filter. Which mod works better to improve the
coverage between 148 and 170 mHz? I am not interested in transmit
capability in this range, but I would like to use the 706's
capabilities to receive some of the local government in my area.
Any information and experiences regarding modifications to the
706 that you can share will be greatly appreciated.

Please respond via e-mail (TVSJR@SPRYNET.COM), due to an increasing
load on the news server on my ISP.

Thanks in advance!!

6009. MFJ-989 antenna tuner comments review

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-31 00:00:00 UTC
From: morel.GRunberg@telrad.co.IL
Message-ID: <c=US%a=_%p=TELRAD%l=MISMAIL-961231081049Z-31@mismail.MIS.ELEX.CO.IL>
Source record: 187317

Hello,

One week ago I posted a request asking for opinions on MFJ-989
antenna tuner. Until now I received 116 answers as follows:

* 92 of the answers were totally unfavorable
* 11 of the answers were quite neutral
* 9 answers compared the MFJ-989 with other similar tuners ,
8 of them clearly preffering the others brands.
* 4 answers were positive with no specific reasons.

The most frequent reasons for lack of satisfaction were:

* roller inductor quality (49 reporting melted elements)
* roller inductors turning mechanism failures (18 reports)
* roller inductor tuning bad feeling (15 reports)
* poor roller turns counter (21 reports)
* poor cabinet mechanics, assembly, finish and paint
(21 reports)
* lack of enough coax positions on antenna switch
(12 reports)
* bad performance on certain types of antennas (whips, long
wires and zeppelins) - 19 reports ; in 12 cases the tuner was
set-up on fire.
* poor operation manual (9 reports)
* poor design (small cabinet size affecting the inductor Q) -
3 reports
* poor performance on 160m short antennas (!!) - 4 reports

The most frequent reported reasons for buying the MFJ-989
were:

* low price (7 reports)
* high number of features vs. low price(7 reports)
* relatively small size (5 reports)
* built-in dummy load (4 reports)

The other reports reffered to: Vectronics 1500, Nye Viking,
Ameritron 1500, Heathkit SA-2500, B&W, J.W.Millen and
Nevada. The most favorable opinions were on NYE-Viking
(10 reports).

I would like to thank to all who find time to answer .

Happy New Year,

Morel, 4X1AD

> Could someone tell me what a birdy is?

A birdy is a thing that flies thru the air and makes a mess on your
patio.
A birdie is a signal generated by your radio that shows up as a
signal somewhere in the valid tuning range. A birdie makes a mess on
weak signals
on the same frequency.

>

Usually, an item which has been abandoned will be "pulled" and offerred
for sale. The shop owner may "buy" an item from a customer and immediately
put it out for sale, but when it is pawned, it has to either be picked up
by
paying the amount back plus interest, or extending for another month by
just
paying the interest. Most shops will hold an item for 60 to 90 days after
the
last customer activity before "pulling" it and offering it for sale. Next
week
happens to be (a) the beginning of the month and (b) the beginning of a new
year. It will be a good time to see new inventory on the shelves. Keep in

mind, seldom does it all come out at once. Usually the past due pawn
tickets will be reviewd in order, and merchandise may trickle out over a
period
of time from the review. For this reason, a few trips may be in order to
view the
anticipated wares. Hope this sheds some light.

Yeah, I have the same problem with my IC-T7a. I can receive below 440, but
there's no way to transmit below 440Mhz. Arrgh.

6026. FT-11R DC Power Prob.

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-31 00:00:00 UTC
From: Todd Schroder <schroder@erols.com>
Message-ID: <32C952AD.6C4E@erols.com>
Source record: 187384

I have a Yaesu FT-11R which has suddenly developed a DC power problem. The E-DC-12 power adapter has stopped powering the radio. The battery works and charges fine. The power adapter's fuse is okay and it has DC at the terminals. I'm not sure what the voltage is supposed to be across which terminals. Is there a power reset in the radio or does this seem to be a malfunctioning adapter? I have previously had a problem after removing a 9.6V battery while the radio was on and attached a 6V battery. The radio would not power-up until the 9.6V battery was re-attached. The radio then had to be turned off before removing the 9.6V battery. Then the 6V battery would power it up. Could this be a related incident?

BTW, we had a flood in our house and the manual is buried in boxes somewhere in storage, so I cannot refer to the documentation.

Thanks,
Todd

This is a repost, I hope it helps you out:

Talked to Yaesu tech support, and they confirmed that some FT-50R's have birdy's anywhere from 146.73 - 146.76. They told me if I ship them the unit (it's still under warranty), they will put a new board in it that's hot off of the presses in Japan. This is suppose to fix the problem.

Unfortunately, they would not ship me the board so I could do the repair myself (and save a few weeks of waiting). Hope this helps out any others who have encountered this problem.

Thanks to all who responded!

P.S. Does anyone know what the CPU Clock shift function does????

If the antenna is removed the birdy is no longer there. Must be some
part of the digital electronics that is not shielded well.

: (formerly WN8LNY)

A 'birdy' is a signal generated inside the rig. It can interfere with the reception of actual transmissions on the same frequency. It will make a rig stop scanning at that frequency.

Most radio equipment generates some birdies. You can find them by radio-isolating the equipment (remove the antenna and put it in a shielded room) then starting scanning.

I agree that Icom generally has the best receiver, and has for the last ten years or so. The only thing that drove me nuts and eventually back to Kenwood was the need for a preamplied mike in the Icom. It is really difficult to get sufficient drive with a Heil mike, and I've had to modify the Icoms, with varying degrees of success. If you are into contesting or DXing and you really need to be LOUD, this is a factor.

I wonder if the IC-756 will have this same setup.

6043. FT-51R: Can a single memory be cleared?

Newsgroup: rec.radio.amateur.equipment
Date: 1996-12-31 00:00:00 UTC
From: obrien@leonardo.net
Message-ID: <5abrhn$bsd@news.leonardo.net>
Source record: 187401

Has anybody figured out a way to clear a single memory location in the Yaesu FT-51R? You can make a location non-addressible, but how about clearing it completely?

The ADMS software can do it by reloading the whole radio but this seems a little heavyweight.

Yes, making the memory non-addressible has the same basic effect, but this can be reversed. I'm looking for an outright zap.

Hello group,

I would like to find a fairly heavy duty spring mobile mount to replace the military unit that I had. I called hustler and asked for their HD unit, but it is too weak to handle their own mast with a heavy duty resonator on it, without having to guy the mast.

Someone had suggested to call Fair radio, which i did, but they had no such thing. Someone lese suggested outbacker, but i could not find their tlelphone number.

Any help would be appreciated.

Thanks, 73 and happy new year to all

I had one. It has some nice features. Personally I believe that having
everything on one big board is a poor design for a receiver. Mine
had intermod/overload problems that one would not see, say, in the
older TS830, which has multiple boards (for different functions).

Hi Mike,

The TS-930 is a very fine rig considering its age. Most problems associated with the TS-930 are related to soldering and corroded connectors. The soldering tends to become dry and quite brittle under the influence of age and heat leading to cracks. If these problems can be located (not too difficult) and corrected, you'll probably have a very fine and economical transceiver considering the present prices.

Regards,
Keith

Ben,

If you're in the market for a mil-spec radio, you can't go wrong with
Motorola. These are generally much more rugged than any ham HT.

There are many models to choose from. Most require programming at a
Motorola dealer, but the JT-1000 can be programmed in the field.

The MFJ 1278 w/DSP only has a DSP front end filter. All the decoding is done the normal analog way. The MFJ may be a perfectly good unit for the money - it's not, however, in the same class as the SCS or HAL units that do the decoding with DSP.

Long Delayed Echo mysteries...

Hi,
I'm doing some research for a documentary about anomalies. One of the subjects I'm interested in is that of LDE's. I have done some reading on the subject and noted a few experiments - however, I'm looking for new information & experiences which may help to throw more light on the matter.

Of especial interest is the geographic "preferences" of LDEs. I noted for example that some evidence pointed to LDEs being more prevalent in the Polar regions. Do LDE's have any other preferences? Also, I'm interested in the various characteristics of the LDEs. I noted some saying that it tends to occur when "opening up" a frequency.

If you have had any experiences, or know of further literature or people I can consult - I would very much appreciate it.

I have posted this in several newsgroups since I wasn't quite sure which is the best place to go, so if this is out of place - I apologise.

If you can help in any way, kindly reply by e-mail. Thanks.

Cheers, Jan...

Take five minutes to read this and it WILL change your life.

If you want to make big bucks ($50000+) without any effords, read this article and follow the instructions!

By investing just $5, you can and WILL get thousands of dollars by the mail.

It's REALLY SIMPLE to do!!!!

STEP 1.

Invest your $5 by writing your name and address on five seperate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST."
(In this way, you're not just sending a dollar to someone; you're payingfor a legitimate service.) Fold a $1 bill inside each paper, and mail them by standard U. S. Mail to the following five addresses:

1-Sam Coice
25550 Buckthorn Ridge Rd
Pioneer Ca 95666

2-Peg Vickmore
14905 Highway 88
Jackson, Ca 95642

3-Brian Hyson
4278 Sayoko Cr
San Jose, Ca, 95136-2335 USA

4-Andres Camacho
Rua Apodi 78
Sao Paulo, SP, 05052-010 Brazil

5-Mariano Peinado
Apdo Correos 291
03730 Javea - Alicante -
Spain

STEP 2.

Now remove the top name from the list, and move the other names up. This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to "at least" 250 newsgroups. Rembering that
the more that you post on, the more people see it, and
the more you will get. There are at least 30,000 newsgroups
at any given moment in time so don't be stingy.

STEP 4.

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the Internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back about 5
responses. Yes, thats right,only 5. You make $5.00 in cash,
not checks or money orders, but real cash with your name at
#5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings. On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people= $500.
They make 250 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $60,000 before your name drops off
the list.And that's only if everyone down the line makes only 250
postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through
and repost this article everywhere you can think of.
The more postings you make, the more cash ends up in
your mailbox. It's too easy and too cheap to pass
up!!!

So thats it. Pretty simple sounding stuff, huh? But believe me, it
works. There are millions of people surfing the net every day, all
day, all over the world. And 100,000 new people get on the net
every day. You know that, you've seen the stories in the paper.
So, my friend, read and follow the simple instructions and play
fair. Thats the key, and thats all there is to it. Print this out
right now so you can refer back to this article easily. Try to
keep
an eye on all the postings you made to make sure everyone is
playing fairly. You know where your name should be.

If you're really not sure or still think this can't be
for real, then don't do it. But please print this article and pass
it along to someone you know who really needs the bucks, and see
what happens.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages
with your name in the list and not sending the bucks to the people
already included, you will not get much. I know someone who did this
and only got about $150 (and that's after two months). Then he sent
the 5 bills, people added him to their lists, and in 4-5 weeks he had
over $10,000!

TRY IT AND YOU'LL BE HAPPY!!! :o) !!!!!!!!!!

>
> Eric <n7zzt>

I had a FT757 which sometimes when transmitting would lock on, and
transmit full
power. It was a grounding problem also, with RF getting up the morse
key line.
A small ceramic capacitor across the phono plug attached to the morse
key
fixed my problem

Hi!

I recently set up my great grandfathers old HF Reciever (its REAL old), it's a TRIO MODEL 9R-59DS. Probably no-ones ever heard of it :). It picks up frequencies from 550khz to 30mhz. I have been listening to all those ham radio operaters and CBers and I decided I want to join in. But Since I don't really know any Ham Radio Operators in my area.. I don't know who to ask for help.. so I posted here. By the way I live in Penrith NSW Australia (if there are any hams around there that might be able to help e-mail me). I beleive that I need some sort of license to be allowed to legally transmit. Here are the questions I need some answers for...

1) Do I need a license to transmit to CB and/or Amateur radio bands? In Australia that is.

2) If so, who do I contact to get this license, and what must I know to get the license? Also.. how much does it cost?

3) How strict are the authorities on people who don't get a license, like, could I get away without having a license?

Thanks for any help you may provide. ANother question, when buying a tranciever that says it can transmit to the frequencies, eg - 1.8mhz to 30mhz does that mean you can set the frequency? Because over here in Australia the cordless phones frequencies are about 29.XXXX so could I transmit to them.. hehe fun :).

This is real important to me, because I don't want to go thru the hasle of learning morse code or something if I don't need to. If I can get away with just buying a tranceiver and using it to talk to people without any sort of license I would be very happy, but if not.. oh well.

Thanks again in advance!
